1	Introduction	1
1.1	Past Work	4
1.2	Overview and Contributions	5
1.3	Notation	7
1.3.1	Sets, Vectors and Matrices	7
1.3.2	Probability Theory	9
1.3.3	Graph Theory	10
1.3.4	Control Theory	10
	References	11
2	Products of Stochastic Matrices and Averaging Dynamics	15
2.1	Averaging Dynamics: Two Viewpoints	15
2.1.1	Left Product of Stochastic Matrices	15
2.1.2	Dynamic System Viewpoint	17
2.1.3	Uniformly Bounded and B -Connected Chains	19
2.1.4	Birkhoff-von Neumann Theorem	20
	References	21
3	Ergodicity of Random Chains	23
3.1	Random Weighted Averaging Dynamics	23
3.2	Ergodicity and Infinite Flow Property	24
3.3	Infinite Flow Graph and ℓ_1 -Approximation	28
4	Infinite Flow Stability	35
4.1	Infinite Flow Stability	35
4.2	Feedback Properties	37
4.3	Comparison Functions for Averaging Dynamics	40
4.3.1	Absolute Probability Process	40
4.3.2	A Family of Comparison Functions	42
4.3.3	Quadratic Comparison Functions	45

4.3.4	An Essential Relation	47
4.4	Class $\mathcal{P}^*$	49
4.5	Balanced Chains	55
4.5.1	Absolute Probability Sequence for Balanced Chains	58
	References	62
5	Implications.	65
5.1	Independent Random Chains.	65
5.1.1	Rate of Convergence	67
5.1.2	i.i.d. Chains	73
5.2	Non-Negative Matrix Theory	76
5.3	Convergence Rate for Uniformly Bounded Chains.	78
5.4	Link Failure Models	80
5.5	Hegselmann-Krause Model for Opinion Dynamics	82
5.5.1	Hegselmann-Krause Model.	82
5.5.2	Loose Bound for Termination Time of Hegselmann-Krause Dynamics	83
5.5.3	An Improved Bound for Termination Time of Hegselmann-Krause Model.	85
5.6	Alternative Proof of Borel-Cantelli lemma	91
	References	92
6	Absolute Infinite Flow Property	93
6.1	Absolute Infinite Flow	93
6.2	Necessity of Absolute Infinite Flow for Ergodicity	97
6.2.1	Rotational Transformation	97
6.2.2	Necessity of Absolute Infinite Flow Property	101
6.3	Decomposable Stochastic Chains.	101
6.4	Doubly Stochastic Chains.	105
6.4.1	Rate of Convergence	107
6.4.2	Doubly Stochastic Chains Without Absolute Infinite Flow Property	109
	References	112
7	Averaging Dynamics in General State Spaces	113
7.1	Framework	113
7.2	Modes of Ergodicity	115
7.3	Infinite Flow Property in General State Spaces	118
7.4	Quadratic Comparison Function	121
	References	126
8	Conclusion and Suggestions for Future Works	127
8.1	Conclusion	127
8.2	Suggestions for Future Works	128

Appendix A: Background Material of Probability Theory	131
Appendix B: Background Material on Real Analysis and Topology. . .	137
Index	141

Product of Random Stochastic Matrices and Distributed
Averaging

Touri, B.

2012, XIV, 142 p., Hardcover
