1	Statistical Physics: Is More than Statistical Mechanics	1
Part I Modeling of Statistical Systems		
2	Random Variables: Fundamentals of Probability Theory and Statistics	5
2.1	Probability and Random Variables	6
2.1.1	The Space of Events	6
2.1.2	Introduction of Probability	7
2.1.3	Random Variables	9
2.2	Multivariate Random Variables and Conditional Probabilities.....	13
2.2.1	Multidimensional Random Variables	13
2.2.2	Marginal Densities.....	14
2.2.3	Conditional Probabilities and Bayes' Theorem	14
2.3	Moments and Quantiles	19
2.3.1	Moments	19
2.3.2	Quantiles	23
2.4	The Entropy	25
2.4.1	Entropy for a Discrete Set of Events.....	25
2.4.2	Entropy for a Continuous Space of Events	26
2.4.3	Relative Entropy	27
2.4.4	Remarks	28
2.4.5	Applications.....	28
2.5	Computations with Random Variables	32
2.5.1	Addition and Multiplication of Random Variables.....	32
2.5.2	Further Important Random Variables	36
2.5.3	Limit Theorems	38
2.6	Stable Random Variables and Renormalization Transformations	40
2.6.1	Stable Random Variables.....	41
2.6.2	The Renormalization Transformation	43

2.6.3	Stability Analysis	44
2.6.4	Scaling Behavior.....	46
2.7	The Large Deviation Property for Sums of Random Variables	47
3	Random Variables in State Space: Classical Statistical	
	Mechanics of Fluids	53
3.1	The Microcanonical System	54
3.2	Systems in Contact	57
3.2.1	Thermal Contact	57
3.2.2	Systems with Exchange of Volume and Energy.....	65
3.2.3	Systems with Exchange of Particles and Energy.....	70
3.3	Thermodynamic Potentials	73
3.4	Susceptibilities	79
3.4.1	Heat Capacities	79
3.4.2	Isothermal Compressibility	81
3.4.3	Isobaric Expansivity	82
3.4.4	Isochoric Tension Coefficient and Adiabatic Compressibility	83
3.4.5	A General Relation Between Response Functions.....	83
3.5	The Equipartition Theorem	85
3.6	The Radial Distribution Function.....	87
3.7	Approximation Methods	94
3.7.1	The Virial Expansion	94
3.7.2	Integral Equations for the Radial Distribution Function	102
3.7.3	Perturbation Theory	104
3.8	The van der Waals Equation	107
3.8.1	The Isotherms	108
3.8.2	The Maxwell Construction	110
3.8.3	Corresponding States	112
3.8.4	Critical Exponents	114
3.9	Some General Remarks about Phase Transitions and Phase Diagrams	116
4	Random Fields: Textures and Classical Statistical	
	Mechanics of Spin Systems	121
4.1	Discrete Stochastic Fields.....	122
4.1.1	Markov Fields	123
4.1.2	Gibbs Fields.....	125
4.1.3	Equivalence of Gibbs and Markov Fields	126
4.2	Examples of Markov Random Fields	127
4.2.1	Model with Independent Random Variables	127
4.2.2	Auto Model	128
4.2.3	Multilevel Logistic Model.....	129
4.2.4	Gauss Model	130

4.3	Characteristic Quantities of Densities for Random Fields	130
4.4	Simple Random Fields	133
4.4.1	The White Random Field or the Ideal Paramagnetic System	133
4.4.2	The One-Dimensional Ising Model	135
4.5	Random Fields with Phase Transitions	139
4.5.1	The Curie–Weiss Model	139
4.5.2	The Mean Field Approximation	141
4.5.3	The Two-Dimensional Ising Model	146
4.6	The Landau Free Energy	152
4.7	The Renormalization Group Method for Random Fields and Scaling Laws	155
4.7.1	The Renormalization Transformation	155
4.7.2	Scaling Laws	156
5	Time-Dependent Random Variables: Classical Stochastic Processes	161
5.1	Markov Processes	162
5.2	The Master Equation	166
5.3	Examples of Master Equations	172
5.3.1	One-Step Processes	172
5.3.2	Chemical Reactions	175
5.3.3	Reaction–Diffusion Systems	176
5.3.4	Scattering Processes	177
5.4	Analytic Solutions of Master Equations	178
5.4.1	Equations for the Moments	178
5.4.2	The Equation for the Characteristic Function	179
5.4.3	Examples	180
5.5	Simulation of Stochastic Processes and Fields	183
5.6	The Fokker–Planck Equation	191
5.6.1	Fokker–Planck Equation with Linear Drift Term and Additive Noise	194
5.7	The Linear Response Function and the Fluctuation– Dissipation Theorem	197
5.8	Approximation Methods	200
5.8.1	The Ω Expansion	201
5.8.2	The One-Particle Picture	207
5.9	More General Stochastic Processes	210
5.9.1	Self-Similar Processes	210
5.9.2	Fractal Brownian Motion	211
5.9.3	Stable Levy Processes	212
5.9.4	Autoregressive Processes	213

6	Quantum Random Systems	221
6.1	Quantum-Mechanical Description of Statistical Systems	221
6.2	Ideal Quantum Systems: General Considerations	227
6.2.1	Expansion in the Classical Regime	230
6.2.2	First Quantum-Mechanical Correction Term	232
6.2.3	Relations Between the Thermodynamic Potential and Other System Variables	233
6.3	The Ideal Fermi Gas	234
6.3.1	The Fermi–Dirac Distribution	234
6.3.2	Determination of the System Variables at Low Temperatures	237
6.3.3	Applications of the Fermi–Dirac Distribution	240
6.4	The Ideal Bose Gas	243
6.4.1	Particle Number and the Bose–Einstein Distribution	243
6.4.2	Bose–Einstein Condensation	245
6.4.3	Pressure	248
6.4.4	Energy and Specific Heat	250
6.4.5	Entropy	252
6.4.6	Applications of Bose Statistics	252
6.5	The Photon Gas and Black Body Radiation	253
6.5.1	The Kirchhoff Law	259
6.5.2	The Stefan–Boltzmann Law	261
6.5.3	The Pressure of Light	262
6.5.4	The Total Radiative Power of the Sun	264
6.5.5	The Cosmic Background Radiation	266
6.6	Lattice Vibrations in Solids: The Phonon Gas	267
6.7	Systems with Internal Degrees of Freedom: Ideal Gases of Molecules	274
6.8	Magnetic Properties of Fermi Systems	281
6.8.1	Diamagnetism	281
6.8.2	Paramagnetism	286
6.9	Quasi-Particles	287
6.9.1	Models for the Magnetic Properties of Solids	290
6.9.2	Superfluidity	295
7	Changes of External Conditions	297
7.1	Reversible State Transformations, Heat, and Work	297
7.1.1	Finite Transformations of State	300
7.2	Cyclic Processes	302
7.3	Exergy and Relative Entropy	306
7.4	Time Dependence of Statistical Systems	309

Part II Analysis of Statistical Systems

8	Estimation of Parameters	317
8.1	Samples and Estimators	318
8.1.1	Monte Carlo Integration	321

8.2	Confidence Intervals	325
8.3	Propagation of Errors	328
8.3.1	Application	330
8.4	The Maximum Likelihood Estimator	331
8.5	The Least-Squares Estimator	336
9	Signal Analysis: Estimation of Spectra	347
9.1	The Spectrum of a Stochastic Process	347
9.2	The Fourier Transform of a Time Series and the Periodogram	353
9.3	Filters	358
9.3.1	Filters and Transfer Functions	360
9.3.2	Filter Design	363
9.4	Consistent Estimation of Spectra	367
9.5	Cross-Spectral Analysis	375
9.6	Frequency Distributions for Nonstationary Time Series	380
9.7	Filter Banks and Discrete Wavelet Transformations	383
9.7.1	Examples of Filter Banks	388
9.8	Wavelets	392
9.8.1	Wavelets as Base Functions in Function Spaces	392
9.8.2	Wavelets and Filter Banks	397
9.8.3	Solutions of the Dilation Equation	401
10	Estimators Based on a Probability Distribution for the Parameters	405
10.1	Bayesian Estimator and Maximum a Posteriori Estimator	405
10.2	Marginalization of Nuisance Parameters	407
10.3	Numerical Methods for Bayesian Estimators	412
11	Identification of Stochastic Models from Observations	421
11.1	Parameter Identification for Autoregressive Processes	421
11.2	Granger Causality	427
11.2.1	Granger Causality in the Time Domain	429
11.2.2	Granger-Causality in the Frequency Domain	430
11.3	Hidden Systems	432
11.4	The Maximum a Posteriori Estimator for the Inverse Problem	435
11.4.1	The Least Squares Estimator as a Special MAP Estimator	436
11.4.2	Strategies for Choosing the Regularization Parameter	438
11.4.3	The Regularization Method	441
11.4.4	Examples of the Estimation of a Distribution Function by a Regularization Method	444
11.5	Estimating the Realization of a Hidden Process	447
11.5.1	The Viterbi Algorithm	447
11.5.2	The Kalman Filter	450
11.5.3	The Unscented Kalman Filter	460
11.5.4	The Dual Kalman Filter	463

12	Estimating the Parameters of a Hidden Stochastic Model	467
12.1	The Expectation Maximization Method (EM Method)	468
12.2	Estimating the Parameters of a Hidden Markov Model	472
12.2.1	The Forward Algorithm	473
12.2.2	The Backward Algorithm	474
12.2.3	The Estimation Formulas	474
12.3	Estimating the Parameters in a State Space Model	477
13	Statistical Tests and Classification Methods	483
13.1	General Comments Concerning Statistical Tests	483
13.1.1	Test Quantity and Significance Level	483
13.1.2	Empirical Moments for a Test Quantity: The Bootstrap Method	487
13.1.3	The Power of a Test	489
13.2	Some Useful Tests	491
13.2.1	The z - and the t -Test	491
13.2.2	Test for the Equality of the Variances of Two Sets of Measurements, the F -Test	492
13.2.3	The χ^2 -Test	493
13.2.4	The Kolmogorov–Smirnov Test	495
13.2.5	The F -Test for Least-Squares Estimators	496
13.2.6	The Likelihood-Ratio Test	497
13.3	Classification Methods	499
13.3.1	Classifiers	500
13.3.2	Estimation of Parameters that Arise in Classifiers	504
13.3.3	Automatic Classification (Cluster Analysis)	505
Appendix: Random Number Generation for Simulating Realizations of Random Variables		509
Problems		511
Hints and Solutions		533
References		541
