

Contents

1	The Origin of Quantum Concepts	1
1.1	Blackbody Radiation.	2
1.2	The Photoelectric Effect	7
1.3	The Compton Effect	9
1.4	Rutherford's Atom and Bohr's Postulates	10
1.5	On Einstein's Radiation Theory	13
1.5.1	Planck's Distribution and the Second Postulate of Bohr	13
1.5.2	Einstein's Specific Heat Model	14
1.6	Solved Problems.	15
1.7	Problems	17
2	Diffraction, Duality and the Schrödinger Equation	19
2.1	Sommerfeld-Wilson-Ishiwara's Quantization Rule	20
2.1.1	The Quantization Rules and the Energies of the Hydrogen Atom	20
2.1.2	The Rotator	22
2.2	The De Broglie Wave-Particle Duality	23
2.3	Diffraction Experiments and the Wave-Like Nature of Particles	25
2.4	Schrödinger's Wave Mechanics	26
2.5	Solved Problems.	29
2.6	Problems	31
3	Properties of the Stationary Schrödinger Equation	33
3.1	Quantization as an Eigenvalue Problem.	33
3.2	Degenerate Eigenfunctions, Orthogonality and Parity	35
3.3	The Free Particle	38
3.3.1	The Physical Meaning of the Free Particle Solutions	42

3.4	The Infinite Quantum Well	44
3.5	The Particle Current Density in Quantum Mechanics	48
3.6	Dirac's Notation and Some Useful Relations	51
3.6.1	General Properties of Bras and Kets	52
3.6.2	Some Useful Relations	52
3.6.3	Momentum Representation	54
3.7	Solved Problems.	56
3.8	Problems	59
4	The Tunneling Effect and Transport Properties.	61
4.1	The 1D Step Potential.	62
4.2	Scattering Amplitudes and the Transfer Matrix	70
4.3	The Rectangular Potential Barrier.	73
4.3.1	Transfer Matrix of the Rectangular Potential Barrier	76
4.3.2	The Wave Functions in the Rectangular Potential Barrier	78
4.3.3	Reflection and Transmission Coefficients for Rectangular Potential Barriers.	80
4.4	The Rectangular Potential Well	83
4.4.1	Continuity and the Transfer Matrix of the Rectangular Potential Well.	84
4.4.2	Eigenvalues and Wave Functions in Rectangular Potential Wells.	87
4.5	Solved Problems.	93
4.6	Problems	97
5	Quantum Coherence and Energy Levels Splitting	99
5.1	A Rectangular Double Well Bounded by Hard Walls	100
5.1.1	Continuity and the Double-Well Transfer Matrix	100
5.1.2	Energy Eigenvalues in the Double Quantum Well	102
5.2	The Double Rectangular Potential Barrier	104
5.2.1	Continuity and the Double-Barrier Transfer Matrix.	104
5.2.2	Transport Properties in the Double Rectangular Potential Barrier.	106
5.3	The Finite Double Quantum Well.	107
5.3.1	Continuity and the Double-Well Transfer Matrix	108
5.3.2	Eigenvalues and Eigenfunctions in a Double Quantum Well	110
5.3.3	Transport Properties in the Double Quantum Well	113
5.4	Finite Periodic Systems.	115
5.4.1	Transport Properties in the Kronig–Penney Model	118
5.5	Solved Problems.	120
5.6	Problems	126

6	The WKB Approximation	129
6.1	The Semi-Classical Approximation	129
6.2	The Scope of the WKB Approximation	132
6.2.1	Continuity Conditions and the Connection Formulas for the WKB Approximation	133
6.2.2	Energy Quantization in the Potential Well	135
6.3	Transfer Matrices in the WKB Approximation	137
6.3.1	The Transfer Matrix of a Quantum Well	137
6.3.2	Transfer Matrix and Tunneling Through a Barrier	141
6.4	Solved Problems	144
6.5	Problems	153
7	Operators and Dynamical Variables	155
7.1	Wave Packets, Group Velocity and Tunneling Time	156
7.2	Operators and Expectation Values	162
7.3	Hermiticity	165
7.3.1	Commutation Relations and Fundamental Theorems	167
7.4	Deviation, Variance and Dispersion of a Physical Variable	170
7.5	Heisenberg's Inequality	172
7.6	Time Evolution; The Schrödinger and Heisenberg Pictures	174
7.6.1	The Schrödinger Picture and the Unitary Time Evolution Operator	174
7.6.2	Heisenberg's Picture	176
7.7	Position and Momentum in the Momentum Representation	179
7.8	Solved Problems	181
7.9	Problems	185
8	Harmonic Oscillator	189
8.1	Introduction	189
8.2	The Linear Harmonic Oscillator	190
8.3	Rising and Lowering Operators	195
8.4	Dipole Transitions and the Spontaneous Emission	197
8.4.1	Selection Rules for Electric Dipole Transitions	198
8.4.2	Lifetime of Excited States	200
8.5	Solved Problems	202
8.6	Problems	207
9	Angular Momentum and Central Potentials	209
9.1	Introduction	209
9.2	Angular Momentum and Their Commutation Relations	209
9.2.1	Commutation Relations Between \hat{L}_i and \hat{x}_j	211
9.2.2	Commutation Relations Between \hat{L}_i and \hat{p}_j	212

9.2.3	Commutation Between the \hat{L}_j Components	212
9.2.4	The Operator \hat{L}^2 and Its Commutation with \hat{L}_j	214
9.3	Eigenvalues and Eigenfunctions of \hat{L}_z and \hat{L}^2	214
9.4	Matrix Representations of the Angular Momentum.	220
9.4.1	Matrix Representations of \hat{L}^2 and \hat{L}_z	220
9.4.2	Matrix Representations of \hat{L}_x and \hat{L}_y	220
9.5	Central Potentials	224
9.6	Solved Problems.	226
9.7	Problems	228
10	The Hydrogen Atom.	231
10.1	Introduction	231
10.2	The Energy Levels of the Hydrogen Atom	233
10.3	Properties of the Hydrogen-Atom Eigenfunctions.	237
10.3.1	The Electronic Configuration of Hydrogen-Like Atoms.	239
10.4	The Hydrogen Atom in a Magnetic Field	240
10.5	The Normal Zeeman Effect	242
10.6	Solved Problems.	244
10.7	Problems	246
11	Spin and the Pauli Equation	249
11.1	Introduction	249
11.2	Spin Eigenvalues and Matrix Representations	252
11.2.1	Eigenvalues of \hat{S}_z and \hat{S}^2	252
11.2.2	Spin Representations and the Pauli Matrices	254
11.2.3	Pauli's Equation	257
11.3	The Spin-Orbit Interaction.	259
11.4	The Total Angular Momentum.	260
11.5	Problems	262
12	Perturbation Theory.	265
12.1	Time-Independent Perturbation Theory	266
12.1.1	Perturbation Theory for Non-Degenerate States	266
12.1.2	Perturbation Theory for Degenerate States.	268
12.2	Time-Dependent Perturbations	272
12.3	The Interaction Representation.	275
12.4	Solved Problems.	277
12.5	Problems	278
13	Identical Particles, Bosons and Fermions.	281
13.1	Introduction	281
13.2	Distinguishable and Indistinguishable Quantum Processes	281

13.3	Bosons and Fermions	284
13.3.1	Bose–Einstein Condensation and the Pauli Exclusion Principle.	285
13.3.2	Bose–Einstein and Fermi–Dirac Statistics	287
13.4	The Effect of the Statistics on the Energy	291
13.4.1	Spin States for Two Spin $1/2$ Particles	291
13.4.2	Two Electrons in a Quantum Well	294
13.4.3	The Helium Atom and the Exchange Energy	296
13.5	Solved Problems.	299
13.6	Problems	302
Appendix A: Time Reversal Invariance		305
Appendix B: Laguerre’s Polynomials		309
