- 1 Balance Equations** 1
 - 1.1 Material Points 2
 - 1.1.1 Summary 3
 - 1.2 Densities for Content, Flow, and Production Rate 4
 - 1.2.1 Densities 4
 - 1.2.2 Current Densities 4
 - 1.2.3 Production 5
 - 1.2.4 Generic Balance Equation 6
 - 1.2.5 Summary 7
 - 1.3 Particle Numbers, Mass, and Electric Charge 8
 - 1.3.1 Particle Numbers and Currents 8
 - 1.3.2 Chemical Reactions 8
 - 1.3.3 Mass 9
 - 1.3.4 Electric Charge 10
 - 1.3.5 Digression on Electromagnetism 11
 - 1.3.6 Summary 12
 - 1.4 Convection and Conduction 13
 - 1.4.1 Conduction 13
 - 1.4.2 Transformation Properties of Currents 14
 - 1.4.3 Material Time Derivative 15
 - 1.4.4 Specific Quantities 16
 - 1.4.5 Summary 17
 - 1.5 Linear and Angular Momentum 17
 - 1.5.1 Stress and External Forces 17
 - 1.5.2 Angular Momentum 18
 - 1.5.3 Normal and Shear Forces 19
 - 1.5.4 Summary 20
 - 1.6 Energy and the First Law of Thermodynamics 20
 - 1.6.1 Kinetic Energy 20
 - 1.6.2 Potential Energy 21
 - 1.6.3 Internal Energy 22

1.6.4	Digression on Time Reversal	23
1.6.5	First Law of Thermodynamics	24
1.6.6	Summary	26
1.7	Entropy and the Second Law of Thermodynamics.....	26
1.7.1	Thermodynamic Equilibrium	27
1.7.2	Balance Equation for Entropy	27
1.7.3	Second Law of Thermodynamics	29
1.7.4	Summary	30
2	Material Equations	31
2.1	Fluid Media	32
2.1.1	Incompressible Fluids	32
2.1.2	Ideal Gas.....	33
2.1.3	Newtonian Fluid Medium	34
2.1.4	Hydrodynamics	35
2.1.5	Aerodynamics	36
2.1.6	Summary	37
2.2	Solid Media	37
2.2.1	Strain	38
2.2.2	Hooke's Law	39
2.2.3	Structural Mechanics	40
2.2.4	Elastodynamics.....	42
2.2.5	Summary	42
2.3	Heat Conduction	42
2.3.1	Fourier's Law.....	43
2.3.2	More on Heat Conduction	44
2.3.3	Heat Equation	44
2.3.4	Summary	45
2.4	Diffusion	45
2.4.1	Diffusion Currents	46
2.4.2	Chemical Potential	46
2.4.3	Diffusion Equation	47
2.4.4	Digression on Open Systems	47
2.4.5	Summary	48
2.5	Charge Transport	49
2.5.1	The Electromagnetic Field in Matter.....	49
2.5.2	Contributions to the Electric Current Density	51
2.5.3	Ohm's Law	51
2.5.4	Summary	52
2.6	Thermoelectric Effects	52
2.6.1	Simultaneous Heat and Charge Transport	53
2.6.2	Forces and Fluxes	53
2.6.3	Kinetic Coefficients for Heat and Charge Transport	54
2.6.4	Summary	55

3	Linear Response Theory	57
3.1	Statistical Thermodynamics	57
3.1.1	Quantum Theory	57
3.1.2	Entropy	60
3.1.3	Equilibrium	61
3.1.4	Summary	63
3.2	Perturbations	63
3.2.1	Interaction Picture	63
3.2.2	Linear Response	65
3.2.3	Perturbation by Light	66
3.2.4	Susceptibility Tensor	67
3.2.5	Summary	68
3.3	Dispersion Relations	68
3.3.1	Causal Functions	69
3.3.2	Kramers-Kronig Relations	70
3.3.3	Summary	72
3.4	Fluctuations and Dissipation	72
3.4.1	Wiener-Khinchin Theorem	72
3.4.2	Kubo-Martin-Schwinger Formula	74
3.4.3	Callen-Welton Theorem	75
3.4.4	Interaction with an Electromagnetic Field	77
3.4.5	Summary	78
3.5	Onsager Relations	78
3.5.1	Time Reversal	79
3.5.2	Symmetries for Susceptibilities	80
3.5.3	Symmetries for Conductivities	82
3.5.4	Symmetries for Kinetic Coefficients	83
3.5.5	Summary	85
4	Examples	87
4.1	Archimedes' Principle	88
4.1.1	Erroneous Reasoning	89
4.1.2	Incompressible Fluid	90
4.1.3	Compressible Fluid	91
4.2	Beam Bending and Buckling	92
4.2.1	Beam Theory	92
4.2.2	Equilibrium	96
4.2.3	An Example	97
4.2.4	Buckling Instability	98
4.3	Bernoulli's Law	100
4.4	Brownian Motion	101
4.4.1	Einstein's Explanation	103
4.4.2	The Diffusion Coefficient	105
4.4.3	Langevin's Approach	106

4.5	Bulk and Surface Acoustic Waves in Solids.....	109
4.5.1	Wave Equation	109
4.5.2	Bulk Acoustic Waves	110
4.5.3	Attenuation	111
4.5.4	Rayleigh Waves	112
4.5.5	More on SAW	114
4.6	Crystal Optics	115
4.6.1	Susceptibility	115
4.6.2	Planar Waves	116
4.6.3	Optical Isotropy	117
4.6.4	Birefringence	118
4.6.5	Polarization Change Due to Birefringence	119
4.6.6	Absorption.....	120
4.6.7	Dispersion	121
4.7	Dielectric Planar Waveguides	121
4.7.1	TE Modes	123
4.7.2	TM Modes.....	124
4.7.3	Graded Index Waveguides	125
4.7.4	Slab Waveguides	127
4.8	Elasticity Moduli	129
4.8.1	Strain and Stress	129
4.8.2	Uniaxial Stress	130
4.8.3	Hydrostatic Pressure	131
4.8.4	Torsion.....	132
4.8.5	Examples: Steel and Rubber.....	133
4.9	Faraday Effect	134
4.9.1	Susceptibility and Onsager's Relation	134
4.9.2	Rotation of the Polarization Vector	135
4.9.3	Drude Model	137
4.9.4	Optical Isolator	139
4.9.5	Yttrium Iron Garnet.....	140
4.10	Fourier's Solution of a Heat Conduction Problem	140
4.10.1	Representation of a Periodic Function	141
4.10.2	Ordinary Instead of Partial Differential Equations	141
4.10.3	Initial Conditions.....	141
4.11	Hagen-Poiseuille Law	142
4.11.1	Exploiting Symmetry	143
4.11.2	Flux	143
4.11.3	Pump Power	144
4.12	Ice Layer	145
4.12.1	Phase Transition Enthalpy	145
4.12.2	The Problem.....	146
4.12.3	Crude Approximation.....	147
4.12.4	Dimensionless Quantities.....	148
4.12.5	The Exact Solution.....	149
4.12.6	Discussion	150

4.13	Metamaterials	150
4.13.1	Resonances	151
4.13.2	Wave Propagation	152
4.13.3	Normal Refraction	153
4.13.4	Refraction in a Backward Medium.....	155
4.13.5	A New Type of Optical Microscope	156
4.13.6	Photonic Crystals	157
4.14	Model Atmosphere	159
4.14.1	Adiabatic Process for a Diatomic Ideal Gas	159
4.14.2	Convection Neutral Atmosphere	160
4.15	Natural Units	162
4.15.1	SI and Atomic Units	162
4.15.2	Remarks	164
4.16	Ohm's Law and Hall Effect	165
4.16.1	Drude Model	166
4.16.2	Onsager Relations.....	167
4.16.3	Hall Effect	168
4.16.4	Electro-Chemical Potential	169
4.17	Optically Active Media	169
4.17.1	Spatial Dispersion.....	170
4.17.2	Optical Activity	171
4.17.3	Quartz.....	172
4.17.4	Natural Grape Sugar	173
4.18	Pockels and Kerr Effect	174
4.18.1	Dielectric Susceptibility	175
4.18.2	Pockels Effect	176
4.18.3	Crystal Symmetry 3m.....	176
4.18.4	Symmetry Compatible Tensors.....	177
4.18.5	Digression on Orders of Magnitude.....	179
4.18.6	How Light Propagation is Affected	180
4.18.7	Kerr Effect.....	181
4.19	Reactions and Diffusion	182
4.19.1	Gray-Scott Model	183
4.19.2	Similarity Considerations	183
4.19.3	Homogeneous Solutions	184
4.19.4	Pattern Formation	186
4.19.5	Further Remarks	188
4.20	Reynold's Number	188
4.20.1	Navier-Stokes Equation.....	188
4.20.2	Similarity Considerations.....	189
4.20.3	Laminar Flow and Turbulence.....	190
4.21	Sound in Air	190
4.21.1	Wave Equation	191
4.21.2	Sound Generation	193

4.22	Stokes' Law	196
4.22.1	The Problem	196
4.22.2	Vorticity and Stream Function	197
4.22.3	The Solution	199
4.22.4	Stoke's Formula	199
4.23	Stress Concentration	201
4.23.1	Circular Hole in a Thin Plate	201
4.23.2	Airy's Stress Function for Planar Problems	203
4.23.3	The Solution	203
4.23.4	Discussion	205
4.24	Surface Plasmon Polaritons	206
4.24.1	The Drude Model	206
4.24.2	Guided TM Mode	207
4.24.3	TE Polarization	210
4.25	Thermal Noise of a Resistor	210
4.25.1	Langevin Equation	211
4.25.2	Nyquist Formula	212
4.25.3	Remarks	214
4.26	Thomson, Seebeck and Peltier Effect	215
4.26.1	Solid Conductors	215
4.26.2	Charge and Heat Transport	216
4.26.3	Thomson Effect	217
4.26.4	Seebeck and Peltier Effect	218
4.27	Vibrating Strings and Membranes	219
4.27.1	Strings	219
4.27.2	Membranes	220
4.27.3	String Eigenmodes	221
4.27.4	Membrane Eigenmodes	225
4.28	White Dwarfs	228
4.28.1	The Model	229
4.28.2	Equation of State	229
4.28.3	Orders of Magnitude	231
4.28.4	Numerical Solution	231
4.28.5	Remarks	232
A	Fields	235
A.1	Covariance	236
A.1.1	Inertial Systems of Reference	236
A.1.2	Tensor Fields	238
A.2	Differentiating Fields	239
A.2.1	Time Derivative	239
A.2.2	Gradient	240
A.2.3	Divergence	240
A.2.4	Curl	240

A.3	Paths, Surfaces and Volumes	241
A.3.1	Paths	241
A.3.2	Surfaces	243
A.3.3	Volumes	246
A.4	Integrating Fields	247
A.4.1	Path Integrals	247
A.4.2	Surface Integrals	248
A.4.3	Volume Integrals	249
A.4.4	Stokes' and Gauss' Theorems	250
A.5	More on Fields	252
A.5.1	Densities and Current Densities	252
A.5.2	Time Derivatives	254
	Glossary	255
	References	277
