

Contents

1	Introduction	1
2	Nanomaterial-Enhanced Fluorescence Polarization and Its Application	3
2.1	Principles of Fluorescence Polarization	3
2.2	Sensitive Detection of Hg^{2+} by Fluorescence Polarization Enhanced by Gold Nanoparticle	5
2.3	DNAzyme-Self-Assembled Gold Nanoparticles for Determination of Cu^{2+} and Pb^{2+} Using Fluorescence Polarization Assay	10
2.4	Peptide-Functionalized Spherical Polyelectrolyte Nanobrushes for Real-Time Sensing of Protease Activity	14
	References	19
3	Versatile Graphene-Based Nano-Bio Probe Design and Its Application	27
3.1	Introduction	27
3.2	Graphene-DNA Molecular Beacon Design and its Application	28
3.3	Graphene-Protein Nanoprobe Design and its Application	31
3.4	Other Graphene-Based Nanoprobes and Their Applications	34
	References	35
4	Metal Nanoparticles-Based Colorimetric Probe Design and Its Application	39
4.1	Introduction	39
4.2	Sensitive and Rapid Colorimetric Detection of Biological Thiols Using Nucleotide-Stabilized Silver Nanoparticles	40
4.3	Colorimetric Chiral Recognition of Enantiomers Using Nucleotide-Capped Silver Nanoparticles	45

4.4	Colorimetric Assay for Phthalates Using UTP-Modified Gold Nanoparticles Cross-Linked by Copper (II).	48
4.5	Multiplexed Analysis of Ag^+ and Hg^{2+} Using Oligonucleotide-Metal Nanoparticle Conjugates	53
	References	60
5	Metal-Nanoclusters-Based Luminescent Probe Design and Its Application	65
5.1	Introduction	65
5.2	Metal-Nanoclusters-Based Luminescent Probes for Nucleic Acid Detection	66
5.3	Metal-Nanoclusters-Based Luminescent Probes for Metal Ions Detection.	67
5.4	Metal-Nanoclusters-Based Luminescent Probes for Cellular Labeling or Imaging	72
	References	74

Nano-Bio Probe Design and Its Application for
Biochemical Analysis

Ye, B.-C.; Zhang, M.; Yin, B.-C.

2012, VIII, 77 p. 22 illus., 19 illus. in color., Softcover

ISBN: 978-3-642-29542-3
