1	Introduction	1
1.1	Introduction	1
1.1.1	Single-Photon Non-Linearities	2
1.1.2	Electromagnetically Induced Transparency	2
1.1.3	Cooperative Effects Due to Dipole–Dipole Interactions	3
1.1.4	Rydberg Atoms	4
1.1.5	Rydberg EIT	5
1.2	Thesis Layout	6
1.3	Publications Arising from this Work	7
	References	7

Part I Rydberg Atom-Light Interactions

2	Rydberg Atoms	15
2.1	Alkali Metal Atom Rydberg States	15
2.2	Rydberg Atom Wavefunctions	16
2.3	Dipole Matrix Elements	19
2.3.1	Fine Structure Basis	20
2.3.2	Hyperfine Structure Basis	20
2.3.3	Rydberg Excitation Transition Strengths	21
2.4	Stark Shift	22
2.4.1	Scalar Polarisability	22
2.5	Summary	24
	References	25
3	Rydberg Atom Interactions	27
3.1	Dipole–dipole Interactions	27
3.2	Interaction Strengths	30

3.3	Angular Dependence	31
3.4	Tuning Interactions with External Fields	32
3.4.1	Static Electric Field	32
3.4.2	Microwave Dressing	33
3.5	Dynamic Effects of Dipole–dipole Interactions	35
3.6	Summary	35
	References	36
4	Atom-Light Interactions	37
4.1	Three Level Atom	37
4.1.1	Finite Laser Linewidth	40
4.1.2	Steady-State Solution	41
4.1.3	Complex Susceptibility	42
4.1.4	Optical Response	42
4.2	Electromagnetically Induced Transparency	43
4.2.1	Related Phenomena	45
4.3	Summary	46
	References	46
5	Cooperative Phenomena	49
5.1	Cooperative Behaviour for Two Atoms	49
5.2	Superradiance from $\mathcal{N}$ -Atoms	52
5.3	Dipole Blockade	54
5.4	Cooperative Optical Non-Linearity	56
5.4.1	N -Atom Model	56
5.4.2	Two-Atom Model	58
5.4.3	Cooperative Optical Non-Linearity	61
5.5	Summary	62
	References	63

Part II Observations of Cooperativity

6	Experiment Setup	67
6.1	Laser Cooling	68
6.1.1	Cooling Lasers	69
6.1.2	MOT	70
6.1.3	Optical Molasses	72
6.2	Optical Pumping	73
6.2.1	Ground-State Density	76
6.3	Rydberg Excitation	77
6.4	EIT Experiments	78
6.5	Data Analysis	80
6.6	Summary	83
	References	83

7	Results	87
7.1	Low- n EIT	87
7.1.1	Weak Probe Spectroscopy	88
7.1.2	Strong Probe Regime	89
7.1.3	Summary	92
7.2	High n EIT : Optical Pumping and Polarisation	92
7.3	Optical Non-Linearity due to Attractive Interactions	94
7.3.1	Temporal Dependence	94
7.3.2	EIT Suppression	95
7.3.3	Frequency Dependence of the EIT Suppression	97
7.3.4	Optical Non-Linearity	98
7.3.5	Summary	100
7.4	Cooperativity due to Repulsive Interactions	101
7.4.1	Experiment Modifications	101
7.4.2	Suppression Mechanisms	103
7.4.3	Density Scaling	105
7.4.4	Comparison with the N -atom Model	106
7.4.5	Summary	109
7.5	Microwave Dressing	110
7.6	Conclusion	112
	References	113

Part III Rydberg Atom Quantum Optics

8	Photon Blockade	117
8.1	The Quantised Electric Field	117
8.1.1	Coherent States	118
8.2	Photon Statistics	119
8.3	Photon Blockade	120
8.3.1	Dark State Polariton	121
8.4	Simple Model for $g^{(2)}(\tau)$	123
8.5	Resonance Fluorescence Correlation Functions	127
8.5.1	The Source-Field Expression	127
8.5.2	Correlation Function	128
8.5.3	Cooperative Emission from Incoherent Atoms	129
8.5.4	Distinguishable Emission	130
8.5.5	Coherent Emission	131
8.6	Summary	132
	References	133

9 Progress Towards a Single Blockade Sphere 135

9.1 Design Constraints 135

9.2 Trapping Atoms in a Single Blockade Volume. 136

9.2.1 Dipole Force 136

9.2.2 Dipole Trap Setup 137

9.3 Experiment Setup 138

9.3.1 Diffraction Limited Optics 138

9.3.2 Electric Field Control 139

9.3.3 Vacuum Chamber. 140

9.3.4 Beam Alignment 140

9.3.5 MOT Alignment 141

9.4 Summary and Outlook 142

References 143

Part IV Conclusions and Outlook

10 Conclusion 147

10.1 References. 148

Appendix A: Useful Circuits 151

Appendix B: Home-Made Viewport Construction. 153

Appendix C: Quantised Atom-Light Interactions 155

Curriculum Vitae 157

Cooperative Optical Non-Linearity in a Blockaded
Rydberg Ensemble

Pritchard, J.D.

2012, XIV, 158 p., Hardcover
