## Part I General Theory

<b>1</b>	<b>A Warming-Up Example</b>	3
1.1	Ergodic Markov Chains	4
1.2	Almost Sure Central Limit Theorem for Ergodic Markov Chains	6
1.3	Central Limit Theorem for Martingales	9
1.4	Time-Variance in Reversible Markov Chains	13
1.5	Central Limit Theorem for Reversible Markov Chains	17
1.6	The Space of Finite Time-Variance Functions	21
1.6.1	The Space $\mathcal{H}_1$	21
1.6.2	The Space $\mathcal{H}_{-1}$	24
1.7	Comments and References	28
	References	30
<b>2</b>	<b>Central Limit Theorems</b>	33
2.1	Central Limit Theorem for Continuous Time Martingales	36
2.2	The Spaces $\mathcal{H}_1$ and $\mathcal{H}_{-1}$	40
2.3	The Resolvent Equation	45
2.4	Dynkin's Martingales	46
2.5	$\mathcal{H}_{-1}$ Estimates of the Time-Variance	47
2.6	Central Limit Theorem for Markov Processes	50
2.7	Some Examples	56
2.7.1	Reversibility	56
2.7.2	Spectral Gap	57
2.7.3	Sector Condition	57
2.7.4	Graded Sector Condition	59
2.7.5	Perturbations of Normal Operators	68
2.8	Invariance Principles in the Multidimensional Case	70
2.8.1	Martingales with Stationary Increments	70
2.8.2	Additive Functionals of Markov Processes	73

2.9	Comments and References . . . . .	76
	References . . . . .	78
<b>3</b>	<b>Random Walks in Random Environment . . . . .</b>	<b>81</b>
3.1	Random Walks with Random Conductances . . . . .	82
3.2	Doubly Stochastic Random Walks . . . . .	89
3.3	Cyclic Random Walks . . . . .	95
3.4	Random Walks with Drift in $\mathcal{H}_{-1}$ . . . . .	100
3.4.1	The Corrector Field . . . . .	102
3.4.2	An Elliptic Equation for the Corrector Field . . . . .	107
3.4.3	The Energy Identity . . . . .	109
3.5	Random Walks in Mixing Environments . . . . .	115
3.6	Doubly Stochastic Random Walks in Dimension $d = 1$ . . . . .	121
3.7	Symmetric Random Walks . . . . .	126
3.8	Comments and References . . . . .	133
	References . . . . .	134
<b>4</b>	<b>Bounds and Variational Principles for the Asymptotic Variance . . . . .</b>	<b>137</b>
4.1	Quadratic Functional of the Resolvent . . . . .	137
4.2	Bounds and Variational Formulas for the Variance . . . . .	143
4.3	Variational Principles in the Graded Sector Context . . . . .	147
4.4	Estimates of the Variance . . . . .	148
4.5	Comments and References . . . . .	151
	References . . . . .	151
<b>Part II Simple Exclusion Processes</b>		
<b>5</b>	<b>The Simple Exclusion Process . . . . .</b>	<b>155</b>
5.1	Exclusion Processes . . . . .	157
5.2	Central Limit Theorems for Additive Functionals . . . . .	161
5.3	The Mean Zero Asymmetric Case . . . . .	162
5.4	Duality . . . . .	171
5.5	The Asymmetric Case, $\alpha = 1/2$ . . . . .	178
5.6	The Asymmetric Case, $\alpha \neq 1/2$ . . . . .	182
5.7	Transient Markov Processes . . . . .	188
5.8	Comments and References . . . . .	192
	References . . . . .	195
<b>6</b>	<b>Self-diffusion . . . . .</b>	<b>199</b>
6.1	The Exclusion Process as Seen from a Tagged Particle . . . . .	200
6.2	Elementary Martingales . . . . .	204
6.3	The Spaces $\mathcal{H}_1$ and $\mathcal{H}_{-1}$ . . . . .	208
6.4	Law of Large Numbers . . . . .	210
6.5	Central Limit Theorem . . . . .	210
6.6	The Mean Zero Asymmetric Case . . . . .	214
6.7	Duality . . . . .	216
6.8	The Asymmetric Case in Dimension $d \geq 3$ . . . . .	220

6.9	The Self-diffusion Matrix . . . . .	233
6.10	Comments and References . . . . .	236
	References . . . . .	239
<b>7</b>	<b>Equilibrium Fluctuations of the Density Field . . . . .</b>	<b>241</b>
7.1	Duality . . . . .	248
7.2	Approximations in $\mathcal{H}_{0,-1}$ . . . . .	253
7.3	The Fluctuation–Dissipation Theorem . . . . .	257
7.4	The Second Class Particle . . . . .	263
7.5	Estimates on the Operators $\mathfrak{L}_{\theta,s,2}$ , $\mathfrak{L}_{\star,a}$ and $\mathfrak{J}_{\star,\pm}$ . . . . .	266
7.6	Comments and References . . . . .	272
	References . . . . .	273
<b>8</b>	<b>Regularity of the Asymptotic Variance . . . . .</b>	<b>275</b>
8.1	The Resolvent Equation . . . . .	276
8.2	The Symmetric Case . . . . .	279
8.3	The Mean Zero Case . . . . .	280
8.4	The Asymmetric Case in $d \geq 3$ . . . . .	284
8.5	Regularity of the Diffusion Coefficients . . . . .	287
8.6	Comments and References . . . . .	288
	References . . . . .	289

### Part III Diffusions in Random Environments

<b>9</b>	<b>Diffusions in Random Environments . . . . .</b>	<b>293</b>
9.1	Diffusions with Periodic Coefficients . . . . .	293
9.2	Remark About the Quasi-periodic Case . . . . .	299
9.3	Diffusions with Stationary Coefficients . . . . .	301
9.3.1	Preliminaries on Stationary Environments . . . . .	302
9.3.2	Spaces of Smooth Functions . . . . .	304
9.3.3	Itô Equations with Stationary Coefficients . . . . .	305
9.4	Environment Process and Its Properties . . . . .	307
9.5	Martingale Decomposition and Central Limit Theorem . . . . .	310
9.6	Homogenization of Solutions of Parabolic Partial Differential Equations . . . . .	313
9.6.1	Random Coefficient Case . . . . .	314
9.6.2	Periodic Case . . . . .	316
9.7	Proofs of Propositions 9.8 and 9.9 . . . . .	317
9.7.1	Proof of Proposition 9.8 . . . . .	318
9.7.2	Proof of Proposition 9.9 . . . . .	319
9.8	One-Dimensional Case . . . . .	321
9.9	Diffusions with Time Dependent Coefficients . . . . .	322
9.9.1	Space-Time Stationary Environments . . . . .	322
9.9.2	Central Limit Theorem . . . . .	326
9.10	Comments and References . . . . .	327
	References . . . . .	328

<b>10 Variational Principles for the Limiting Variance</b>	331
10.1 Spaces of Vector Fields	331
10.2 Upper Bound	334
10.3 Lower Bound	339
10.4 Spectral Representation of Homogeneous Fields	341
10.5 Comments and References	343
References	343
<b>11 Diffusions with Divergence Free Drifts</b>	345
11.1 Passive Tracer Model	345
11.2 Properties of the Flow and the Definition of the Stream Matrix	345
11.3 Central Limit Theorem for a Diffusion with Bounded Stream Matrix	348
11.4 Convection Enhanced Diffusions	349
11.5 Time Dependent Flows with Finite Péclet Number	350
11.6 Proof of Theorem 11.4	351
11.6.1 Notation	352
11.6.2 Statements of Some Technical Results	352
11.6.3 Properties of the Environment Process	353
11.6.4 Properties of the $\mathcal{H}_1$ -Norm	355
11.6.5 Construction of the Corrector Field	357
11.6.6 Proof of the Energy Identity	363
11.7 Proofs of the Technical Results	367
11.7.1 Proof of Proposition 11.6	367
11.7.2 Proof of Proposition 11.7	367
11.7.3 Proof of Proposition 11.8	369
11.7.4 Proof of Proposition 11.9	369
11.7.5 Ergodic Theorem	370
11.8 Comments and References	371
References	372
<b>12 Diffusions with Gaussian Drifts</b>	375
12.1 Stationary Gaussian Fields	376
12.2 Hermite Polynomials and Graded Structure of $L^2(\mathbb{Q})$	376
12.3 Environment Process and Its Properties	377
12.4 Central Limit Theorem	381
12.5 Proofs of Technical Results	382
12.5.1 Proof of Estimate (12.2)	382
12.5.2 Proofs of Theorem 12.3 and Proposition 12.4	384
12.6 Superdiffusive Transport in a Flow with Infinite Péclet Number	387
12.6.1 Homogeneous, Isotropic Gaussian Flows	387
12.6.2 Flows with Infinite Péclet Numbers	389
12.7 Central Limit Theorem for Diffusions in Gaussian and Markovian Flows	394
12.8 Markovian Dynamics of the Environment	396

12.8.1	Hermite Polynomials . . . . .	396
12.8.2	Definition of the Transition Semigroup . . . . .	397
12.8.3	Properties of the Generator . . . . .	398
12.8.4	More General Formulation of the Markov Property of the Environment Process . . . . .	399
12.9	Periodic Approximation of the Flow . . . . .	400
12.10	Environment Process . . . . .	403
12.11	Proof of Part (1) of Theorem 12.13 . . . . .	405
12.12	On Superdiffusive Behavior of a Tracer in an Isotropic Flow . . .	409
12.13	Proof of Part (2) of Theorem 12.13 . . . . .	413
12.14	Proofs of the Results from Sect. 12.8 . . . . .	415
12.14.1	Construction of the Semigroup . . . . .	415
12.14.2	Proof of Proposition 12.16 . . . . .	420
12.14.3	Proof of Proposition 12.17 . . . . .	420
12.15	Proofs of the Results from Sect. 12.10 . . . . .	422
12.15.1	Proof of Proposition 12.19 . . . . .	422
12.15.2	Proof of Proposition 12.20 . . . . .	423
12.16	Appendix: Some Auxiliary Results About Gaussian Random Fields . . . . .	427
12.16.1	Multiple Stochastic Integrals . . . . .	427
12.16.2	Some Properties of Hermite Polynomials . . . . .	430
12.17	Comments and References . . . . .	431
	References . . . . .	433
<b>13</b>	<b>Ornstein–Uhlenbeck Process with a Random Potential . . . . .</b>	<b>437</b>
13.1	Random Diffusion of a Particle with Inertia . . . . .	437
13.2	Proof of the Central Limit Theorem . . . . .	438
13.3	Proof of Proposition 13.2 . . . . .	445
13.4	Gaussian Bounds on Transition Probability Densities . . . . .	446
13.5	Comments and References . . . . .	453
	References . . . . .	454
<b>14</b>	<b>Analytic Methods in Homogenization Theory . . . . .</b>	<b>455</b>
14.1	$G$ -Convergence of Operators . . . . .	456
14.2	$\Gamma$ -Convergence of Quadratic Forms . . . . .	458
14.3	$G$ -Convergence of Matrix Valued Functions . . . . .	460
14.4	Application to Homogenization of Diffusions in Random Media . . . . .	466
14.5	Appendix: Ellipticity of the Coefficient Matrix of a Coercive Form	470
14.6	Comments and References . . . . .	471
	References . . . . .	472
