

# Contents

<b>1</b>	<b>A Look-Down Model with Selection</b> .....	<b>1</b>
	Boubacar Bah, Etienne Pardoux, and Ahmadou Bamba Sow	
1.1	Introduction and Preliminaries .....	1
1.2	Wright–Fisher Diffusion with Selection and Duality .....	3
1.3	Look-Down with Selection, Exchangeability .....	5
1.4	Convergence to the Wright–Fisher Diffusion with Selection .....	14
	References .....	28
<b>2</b>	<b>Control of Inventories with Markov Demand</b> .....	<b>29</b>
	Alain Bensoussan	
2.1	Introduction .....	29
2.2	No Backlog and No Set-Up Cost .....	30
2.3	No Backlog and Set-Up Cost .....	47
	References .....	55
<b>3</b>	<b>On the Splitting Method for Some Complex-Valued Quasilinear Evolution Equations</b> .....	<b>57</b>
	Zdzisław Brzeźniak and Annie Millet	
3.1	Introduction .....	57
3.2	Well-Posedness and First A Priori Estimates .....	60
3.3	Speed of Convergence .....	73
3.4	Speed of Convergence for the Splitting Method .....	86
	References .....	89
<b>4</b>	<b>A Modelization of Public–Private Partnerships with Failure Time</b> ....	<b>91</b>
	Caroline Hillairet and Monique Pontier	
4.1	Introduction .....	92
4.2	The Problem Setting .....	92
4.3	Solution of the Problem Without Default .....	94
4.4	Introduction of a Default Time, Without Penalty .....	101
4.5	Penalty in Case of Default with $r = 0$ .....	110

4.6	Conclusion .....	117
	References .....	117
<b>5</b>	<b>On a Flow of Transformations of a Wiener Space.....</b>	<b>119</b>
	Joseph Najnudel, Daniel Stroock, and Marc Yor	
5.1	Introduction .....	119
5.2	Preliminary Description of the Flow .....	122
5.3	A More Explicit Expression .....	124
5.4	A Two Parameter Gaussian Process .....	129
	References .....	131
<b>6</b>	<b>Measure Invariance on the Lie-Wiener Path Space .....</b>	<b>133</b>
	Nicolas Privault	
6.1	Introduction .....	133
6.2	The Lie-Wiener Path Space .....	135
6.3	Moment Identities on Path Space .....	140
6.4	Random Hermite Polynomials on Path Space .....	143
6.5	Girsanov Identities on Path Space .....	148
	References .....	150
<b>7</b>	<b>Derivatives of Solutions of Semilinear Parabolic PDEs and Variational Inequalities with Neumann Boundary Conditions .....</b>	<b>153</b>
	Denis Talay	
7.1	Motivation .....	154
7.2	Our Key Tool: Derivatives of Flows of 1D Reflected Diffusions .....	156
7.3	Stochastic Representations of Derivatives of Solutions of Semilinear Parabolic PDEs .....	160
7.4	Stochastic Representations of Derivatives of Solutions of 1D Variational Inequalities .....	163
7.5	Conclusion .....	165
	References .....	167
<b>8</b>	<b>Some Differential Systems Driven by a fBm with Hurst Parameter Greater than 1/4 .....</b>	<b>169</b>
	Samy Tindel and Iván Torrecilla	
8.1	Introduction .....	169
8.2	Increments .....	171
8.3	Abstract Results .....	175
8.4	Application to Fractional Brownian Motion .....	186
	References .....	201
<b>9</b>	<b>Transportation Cost Inequalities for Diffusions Under Uniform Distance .....</b>	<b>203</b>
	Ali Suleyman Üstünel	
9.1	Introduction .....	203
9.2	Diffusion Type Processes with Lipschitz Coefficients .....	205
9.3	Transport Inequality for the Monotone Case .....	209
	References .....	213

Stochastic Analysis and Related Topics

In Honour of Ali Süleyman Üstünel, Paris, June 2010

Decreusefond, L.; Najim, J. (Eds.)

2012, XII, 216 p., Hardcover

ISBN: 978-3-642-29981-0
