1	Introduction	1
	References	6
2	Some Basic Concepts on Complex Networks and Games	9
2.1	Complex Networks	9
2.1.1	Examples of Real Networks	10
2.1.2	Definitions	12
2.1.3	Some Network Models	18
2.1.4	Processes on Networks	25
2.2	Games	34
2.2.1	Classical Game Theory	35
2.2.2	Evolutionary Game Theory	37
2.2.3	Evolution of Cooperation	41
	References	43

Part I Evolutionary Dynamics on Static Complex Networks

3	The Prisoner's Dilemma on Static Complex Networks	51
3.1	The Model	52
3.2	Dynamic Equilibrium	53
3.3	Pure Strategists and Fluctuating Individuals	55
3.4	Dipolar Network Model	56
3.5	Distribution of the Strategies Among Connectivity Classes on SF Networks	60
3.6	Cooperation Times of the Fluctuating Set on SF Networks	62
3.7	Microscopic Organization Dynamics of Cooperation	64
3.8	Dependence on the Initial Conditions	67
3.9	Influence of the Degree of Heterogeneity of the Network	72
3.10	Conclusions	74
	References	75

4	Other Games on Static Complex Networks	77
4.1	Average Level of Cooperation, and Fractions of Pure Strategists and Fluctuating Individuals	79
4.2	Number of Clusters of Cooperators and Defectors	81
4.3	Distribution of the Cooperation Among the Degrees of Connectivity	82
4.4	Conclusions	83
	References	85
5	The Prisoner's Dilemma Game on Random Scale-Free Networks	87
5.1	Numerical Simulations on Random Scale-Free Networks	88
5.2	The Degree-Based Mean Field Approximation	91
5.3	Targeted Cooperation	93
5.4	Dependence with the Exponent of the Power-Law Distributions for the Mean Field Approximation	95
5.5	Comparison Between Simulations and Mean-Field Approximation for the Targeted Cooperation Initial Conditions	96
5.6	Conclusions	98
	References	99
6	The Prisoner's Dilemma Game on Scale-Free Networks with Limited Number of Interactions	101
6.1	The Model	102
6.2	Average Level of Cooperation	105
6.3	Imposing a More Tight Connectivity Restriction	106
6.4	Conclusions	110
	References	111

Part II Evolutionary Dynamics on Growing Complex Networks

7	Complex Networks from Evolutionary Preferential Attachment	117
7.1	The Model	118
7.2	Degree Distribution and Average Level of Cooperation	119
7.3	Degree Distribution Among Cooperators	121
7.4	Clustering Coefficient and Degree–Degree Correlations	123
	7.4.1 Clustering Coefficient	124
	7.4.2 Degree–Degree Correlations	125
7.5	Dynamics on Static Networks Constructed Using the EPA Model	126
	7.5.1 Stopping Growth and Letting the Evolutionary Dynamics Evolve	127

7.5.2	Effects of Randomizations on the Evolutionary Dynamics	127
7.5.3	EPA Networks as Substrates for Evolutionary Dynamics	128
7.6	Time Evolution of the $P_c(k)$ After Network Growth	130
7.7	Microscopic Roots of Cooperation After Network Growth	131
7.8	Other τ_D/τ_T Time Relations	133
7.9	Conclusions.	136
	References	137
8	Complex Networks from Other Dynamic-Dependent Attachment Rules	139
8.1	The Model	140
8.1.1	A Simplification of the Model.	141
8.2	Degree Distribution	143
8.3	Average Level of Cooperation as a Function of the Parameters of the System	145
8.4	Average Level of Cooperation After the Growth has Finished	146
8.5	Probability of Fixation	147
8.6	Level of Cooperation After Re-Initializing the Strategies	148
8.7	Conclusions.	150
	References	151
9	Summary.	153
	About the Author	157

Evolutionary Games in Complex Topologies
Interplay Between Structure and Dynamics

Poncela Casasnovas, J.

2012, XIV, 158 p., Hardcover

ISBN: 978-3-642-30116-2
