| PREFACE | 11 |
| ACKNOWLEDGMENT | 17 |
| 1. COMPUTER-AIDED MODELING AND SIMULATION | 19 |
| 1.1. Introduction | 19 |
| 1.2. Definitions | 19 |
| 1.3. Categories of approaches to modeling | 19 |
| 1.4. Phases of development | 20 |
| 1.5. The role of computers in modeling and simulation | 21 |
| 1.6. Methodology of computer-aided modeling and simulation | 21 |
| 1.6.1. Formulation of the problem | 21 |
| 1.6.2. Analysis of the problem | 23 |
| 1.6.3. Forming the mathematical model | 24 |
| 1.6.3.1 General considerations | 24 |
| 1.6.3.2 General principles of good modeling | 36 |
| 1.6.4. Selection of computerized methods | 49 |
| 1.6.5. Forming the program | 50 |
| 1.6.5.1 Development of the algorithm | 51 |
| 1.6.5.2 Requirements for resources | 54 |
| 1.6.5.3 Program characteristics | 54 |
| 1.6.6. Simulation | 86 |
| 1.6.6.1 Aspects of performing simulation | 86 |
| 1.6.6.2 Advantages of simulation | 98 |
| 1.7. Supplement: GIC – software tool for calculating the ground- ing grid impulse characteristics | 99 |
| 1.7.1. Purpose of the program | 99 |
| 1.7.2. Mathematical model of a grounding grid in an impulse regime | 100 |
| 1.7.3. Sequence of calculation | 100 |
| 1.7.4. Description of the software | 101 |
| 1.7.4.1 Defining the parameters for calculating grounding grid impulse characteristics | 102 |

| | | |
|---------|---|-----|
| 1.7.4.2 | Executing the calculation | 106 |
| 1.7.4.3 | Display of calculation results | 106 |
| 1.7.5. | Calculation examples | 108 |
| 1.7.6. | Input-output values and possible errors | 113 |
| 1.7.6.1 | Input-output variables | 113 |
| 1.7.6.2 | Possible Errors | 114 |
| 1.7.6.3 | Messages when working with the software tool GIC | 116 |
| 1.7.7. | Using windows commands | 117 |
| 1.7.7.1 | Opening the program | 117 |
| 1.7.7.2 | Appearance of screen with windows com- mands | 117 |
| 1.7.7.3 | Description of individual commands using the help menu | 117 |

LITERATURE 130

2. APPLICATION OF SOFTWARE TOOLS IN POWER ENGINEERING CALCULATIONS 135

| | | |
|---------|--|-----|
| 2.1. | MATLAB® /Simulink® | 135 |
| 2.1.1. | Introduction | 135 |
| 2.1.2. | Basic groups of blocks in Simulink® software* . . . | 138 |
| 2.1.3. | Additional module SimPowerSystems™* | 142 |
| 2.1.4. | Application of MATLAB® technical computing soft- ware in calculation of characteristic values of fault current | 160 |
| 2.1.4.1 | General considerations | 160 |
| 2.1.4.2 | Calculation of characteristic values of the fault current | 160 |
| 2.1.4.3 | Calculation process using the Simulink® mod- ule | 162 |
| 2.1.5. | SPLCAD software tool for designing medium-voltage overhead lines | 167 |
| 2.1.5.1 | Introduction | 167 |
| 2.1.5.2 | Description of SPLCAD software tool and an example of its application | 169 |
| 2.1.6. | Simulink® model of a turbine regulator in the "Kokin Brod" hydroelectric power plant | 180 |
| 2.1.6.1 | General data on the hydroelectric power plant | 180 |
| 2.1.6.2 | Modeling the "Kokin Brod" HPP | 180 |
| 2.1.6.3 | Display of the "Kokin Brod" HPP turbine regulator | 184 |

| | | |
|---------|---|-----|
| 2.1.6.4 | Simulink® model of turbine regulator | 185 |
| 2.1.6.5 | Comparative analysis of numerically and experimentally obtained results | 187 |
| 2.2. | EMTP / ATP | 188 |
| 2.2.1. | Introduction | 188 |
| 2.2.2. | Examples of calculations of overvoltages caused by switching operations of the disconnector in metal-enclosed SF ₆ gas insulated switchgears | 192 |
| 2.2.2.1 | General considerations | 192 |
| 2.2.2.2 | Electromagnetic transient processes in secondary circuits of measurement transformers in GIS | 197 |
| 2.2.2.3 | Calculation of growth of potential of the metal enclosure of an SF ₆ gas insulated switchgear caused by switching operations of the disconnector | 207 |
| 2.3. | MS Excel / MS Access | 216 |
| 2.3.1. | Introduction | 216 |
| 2.3.2. | Application of databases in designing high-voltage substations | 219 |
| 2.3.2.1 | Criteria for selection of high-voltage equipment | 219 |
| 2.3.2.2 | Calculation of characteristic values of fault current | 221 |
| 2.3.3. | Application of databases in selection of high-voltage equipment | 226 |
| 2.3.3.1 | Definition of database types | 226 |
| 2.3.3.2 | Example of the application of MS Excel | 228 |
| 2.3.3.3 | Example of the application of MS Access | 232 |
| 2.3.4. | Application of MS Excel macros for design in power engineering | 238 |
| 2.3.4.1 | Developing macros in MS Excel | 238 |
| 2.3.4.2 | Examples of the application of macros | 241 |
| 2.3.5. | Application of MS Excel in designing the power supply of telecommunications equipment | 246 |
| 2.3.5.1 | Technical description of power supply with direct voltage | 246 |
| 2.3.5.2 | Technical calculations | 248 |
| 2.4. | AutoCAD | 255 |
| 2.4.1. | Introduction | 255 |
| 2.4.2. | Spatial (3D) model of a turbogenerator | 255 |

| | |
|---|-----|
| 2.4.3. Calculation of the moment of inertia of busbars . . . | 260 |
| 2.4.4. Designing lightning protection for general and special purpose structures | 263 |
| 2.4.4.1 General considerations | 263 |
| 2.4.4.2 Theoretical assumptions for calculation of the protection level and protected zone . . . | 264 |
| 2.4.4.3 Examples of calculations of the protected zone for a general purpose structure | 271 |
| 2.4.4.4 Example of calculation of protected zone for a special purpose structure | 274 |
| 2.4.5. Designing lightning protection for substations . . . | 281 |
| 2.4.5.1 General considerations | 281 |
| 2.4.5.2 Overview of the method for evaluating the protected zone of substation as a special purpose structure | 281 |
| 2.4.5.3 Example of calculation of protected zone for substation | 290 |
| 2.4.6. Designing lightning protection for overhead lines . | 293 |
| 2.4.6.1 General considerations | 293 |
| 2.4.6.2 Review of the method for calculating the protected zone of overhead lines as structures with limited danger | 295 |
| 2.4.6.3 Program organization | 297 |
| 2.4.6.4 Examples of calculation of overhead line shielding zone | 300 |
| 2.4.7. Conclusions | 303 |

LITERATURE

305

| | |
|---|------------|
| 3. APPLICATION OF SOFTWARE TOOLS IN DRAFTING GRAPHICAL DOCUMENTATION | 312 |
| 3.1. Introduction | 312 |
| 3.2. Graphical documentation | 313 |
| 3.2.1. Electrotechnical graphic symbols | 313 |
| 3.2.2. Types of electrical diagrams | 315 |
| 3.2.3. Marking of devices and connections in diagrams . | 321 |
| 3.3. EPLAN | 334 |
| 3.3.1. Introduction | 334 |
| 3.3.2. EPLAN concept | 334 |
| 3.3.3. Main functions of the CAE tool EPLAN Electric P8 | 336 |
| 3.3.4. Example of the application of EPLAN | 337 |

| | |
|--|------------|
| 3.4. Application of the program SIMARIS DESIGN and SIMARIS SIVACON for design and installation of low-voltage switchgear | 339 |
| 3.4.1. Introduction | 339 |
| 3.4.2. Application of the program SIMARIS DESIGN | 340 |
| 3.4.3. Application of the program SIMARIS SIVACON | 359 |
| LITERATURE | 367 |
| 4. APPLICATION OF SOFTWARE TOOLS IN POWER ENGINEERING PROJECT MANAGEMENT | 369 |
| 4.1. About projects | 369 |
| 4.1.1. Definition of a project | 369 |
| 4.1.2. Types of designs | 369 |
| 4.1.3. Participants in realization of the project | 371 |
| 4.1.4. Content of main design | 377 |
| 4.1.5. Phases within the realization of the project from the perspective of the investor | 386 |
| 4.1.6. Types of contracts | 388 |
| 4.1.7. Example contract | 392 |
| 4.2. Basics of project management | 395 |
| 4.2.1. Project cycle | 396 |
| 4.2.2. Phases of project management | 397 |
| 4.3. Examples of project management | 398 |
| 4.3.1. Application of the program MS Excel | 398 |
| 4.3.1.1 Forming dynamic Gantt charts | 399 |
| 4.3.1.2 Description of activities | 400 |
| 4.3.2. Application of the program MS Project | 403 |
| 4.3.2.1 MS Project basics | 403 |
| 4.3.2.2 Application of MS Project in the drafting a complete project | 405 |
| 4.3.2.3 Closing considerations | 425 |
| LITERATURE | 427 |
| LIST OF ABBREVIATIONS | 430 |
| INDEX OF KEY WORDS | 434 |
