Contents

Part I Basic Concepts and Flexibility Issues

1 Introduction 3
1.1 Motivation 3
1.2 Goal and Intended Audience 5
1.3 Learning Objectives 6
1.4 Outline and Organization of the Chapters 6

2 Process-Aware Information Systems 9
2.1 Introduction 9
2.2 Prespecified and Repetitive Processes 10
2.2.1 Motivation 11
2.2.2 Examples of Prespecified Processes 12
2.2.3 Discussion 14
2.3 Knowledge-Intensive Processes 15
2.3.1 Motivation 15
2.3.2 Examples of Knowledge-Intensive Processes 16
2.3.3 Discussion 20
2.4 Perspectives on a PAIS 20
2.4.1 Function Perspective 21
2.4.2 Behavior Perspective 22
2.4.3 Information Perspective 25
2.4.4 Organization Perspective 26
2.4.5 Operation Perspective 27
2.4.6 Time Perspective 29
2.5 Components of a PAIS 30
2.5.1 Overview 30
2.5.2 Build-Time Environment 30
2.5.3 Run-Time Environment 33
2.6 Summary 40
Exercises 41

3 Flexibility Issues in Process-Aware Information Systems 43
3.1 Motivation 43
3.2 A Taxonomy of Flexibility Needs in Process-Aware Information Systems 44
3.2.1 Variability 45
3.2.2 Looseness 46
3.2.3 Adaptation 46
3.2.4 Evolution 47
3.3 Requirements for a Flexible PAIS 50
3.4 Summary 52
3.5 Book Structure 53
Exercises 54

Part II Flexibility Support for Prespecified Processes

4 Process Modeling and Flexibility-by-Design 59
4.1 Motivation 59
4.2 Modeling Prespecified Processes 60
4.2.1 Basic Concepts 60
4.2.2 Control Flow Patterns 63
4.2.3 Flexibility-by-Design Through Control Flow Patterns 69
4.2.4 Granularity of Process Models and Its Relation to Flexibility 72
4.3 Executing Prespecified Processes 72
4.3.1 Process Instance and Execution Trace 73
4.3.2 Enabled Activities and Instance Completion 75
4.4 Verifying Prespecified Process Models 76
4.4.1 Process Model Soundness 77
4.4.2 Correctness of Data Flow 80
4.4.3 Well-Structured Versus Unstructured Process Models 84
4.5 Summary 85
Exercises 85

5 Process Configuration Support 89
5.1 Motivation 89
5.2 Behavior-Based Configuration Approaches 92
5.2.1 Hiding and Blocking 93
5.2.2 Configurable Nodes 96
5.3 Structural Configuration Approaches 103
5.3.1 Representing a Process Family Through a Base Process and Prespecified Changes 104
5.3.2 Configuring a Process Variant Through Structural Changes 110
5.4 End-User Support in Configuring Process Variants 112
5.4.1 Questionnaire-Driven Process Configuration 112

5.4.2 Feature-Driven Process Configuration 119
5.4.3 Context-Driven Process Configuration 120
5.5 Further Aspects 120
5.5.1 Capturing Variability of Multiple Process Perspectives 121
5.5.2 Ensuring Correctness of Configured Process Variants 121
5.5.3 Merging Process Variants 122
5.5.4 Adaptive Reference Process Modeling 123
5.6 Summary 123
Exercises 124

6 Exception Handling 127
6.1 Motivation 127
6.2 Exception Sources and Their Detection 129
6.2.1 Sources of Exceptions 129
6.2.2 Detecting Exceptions 131
6.3 Handling Exceptions 131
6.3.1 Exception Handling Patterns 134
6.4 Compensation Handling 143
6.4.1 Semantic Rollback Through Compensation 143
6.4.2 Compensation Spheres 144
6.5 Exception Handling in Selected Approaches 146
6.5.1 Compensation and Exception Handling in WS-BPEL 147
6.5.2 Exception Handling in the Exlet Approach 148
6.6 Summary 150
Exercises 150

7 Ad hoc Changes of Process Instances 153
7.1 Motivation 153
7.2 Changing the Behavior of a Running Process Instance 156
7.2.1 Core Challenges 156
7.2.2 A Basic Taxonomy for Ad hoc Changes 161
7.3 Structurally Adapting Prespecified Process Models 163
7.3.1 Basics 163
7.3.2 Adaptation Patterns 166
7.3.3 Defining Structural Changes with Adaptation Patterns 167
7.3.4 Ensuring Correctness of Structural Changes 172
7.4 Ensuring State Compliance with a Changed Process Model 176
7.4.1 Ad hoc Changes and Process Instance States 177
7.4.2 A Correctness Notion for Dynamic Instance Changes 179
7.4.3 A Relaxed Correctness Notion for Coping with Loop Changes 181
7.4.4 Efficient Realization of Ad hoc Changes 185
7.5 Manual Definition of Ad hoc Changes 189

7.6 Assisting End-Users Through the Reuse of Ad hoc Changes 191
7.6.1 Reusing Knowledge About Similar Ad hoc Changes 191
7.6.2 Memorizing Ad hoc Changes 193
7.6.3 Retrieving and Adapting Similar Ad hoc Changes 198
7.6.4 Concluding Remarks 205
7.7 Automated Adaptation and Evolution of Process Instances 206
7.8 Duration of Ad hoc Changes 207
7.9 Change Scope 209
7.10 Further Issues 209
7.10.1 Controlling Access to Process Change Functions 209
7.10.2 Controlling Concurrent Ad hoc Changes 210
7.10.3 Ensuring Traceability of Ad hoc Changes 211
7.10.4 Ensuring Business Process Compliance 212
7.11 Discussion 212
7.12 Summary 214
Exercises 214

8 Monitoring and Mining Flexible Processes 219
8.1 Introduction 219
8.2 Execution and Change Logs 221
8.3 Mining Execution Logs 223
8.3.1 Process Discovery 225
8.3.2 Conformance Checking 227
8.4 Mining Change Logs 229
8.4.1 Anatomy of Process Changes 230
8.4.2 Directly Applying Process Mining to Change Logs 232
8.4.3 Understanding Change Dependencies 234
8.4.4 Enhancing Multi-phase Mining with Commutativity 236
8.4.5 Mining Change Processes with Regions 239
8.5 Mining Process Variants in the Absence of a Change Log 242
8.5.1 Closeness of a Reference Process Model and a Collection of Process Variants 243
8.5.2 Scenarios for Mining Process Variants 244
8.5.3 A Heuristic Approach for Process Variant Mining 245
8.5.4 Other Approaches for Process Variant Mining 248
8.6 Summary 249
Exercises 250

9 Process Evolution and Instance Migration 253
9.1 Motivation 253
9.2 Fundamentals of Process Model Evolution 254
9.2.1 Evolving a Process Model at the Process Type Level 254
9.2.2 Deferred Process Model Evolution 256
9.2.3 Immediate Process Model Evolution and Instance Migration 257
9.2.4 User Perspective 261
9.2.5 Existing Approaches for Migrating Process Instances 263

9.3 Common Support of Type and Instance Changes 266
9.3.1 Migrating Biased Process Instances 266
9.3.2 Overlapping Changes at the Type and Instance Level 270
9.3.3 Integrated Change Support in Existing Approaches 274
9.4 Coping with Noncompliant Process Instances 275
9.4.1 Example Scenario 276
9.4.2 Bringing Noncompliant Instances into a Compliant State 277
9.4.3 Advanced Strategies for Treating Noncompliant Instances 278
9.5 Evolving Other PAIS Perspectives 281
9.5.1 Changes of the Organization Perspective 281
9.5.2 Changes of the Information Perspective 282
9.5.3 Changes of Other Perspectives 282
9.6 Process Model Refactoring 283
9.6.1 Identifying Refactoring Opportunities 283
9.6.2 Refactoring Techniques 286
9.7 Summary 291
Exercises 291

10 Business Process Compliance 297
10.1 Motivation 297
10.2 Modeling Compliance Rules 300
10.3 A Priori Compliance Checking 307
10.4 Compliance Monitoring 308
10.5 A-posteriori Compliance Checking 311
10.6 Effects of Process Changes on Compliance 312
10.7 User Perspective 314
10.8 Existing Approaches 316
10.9 Summary 316
Exercises 317

Part III Flexibility Support for Loosely Specified Processes

11 Concretizing Loosely Specified Processes 323
11.1 Motivation 323
11.2 Taxonomy of Decision Deferral 324
11.2.1 Degree of Freedom 324
11.2.2 Planning Approach 326
11.2.3 Scope of Decision Deferral 326
11.2.4 Process Perspective 327
11.2.5 Degree of Automation 327
11.2.6 Decision Making and Decision Support 328
11.3 Decision Deferral Patterns 328
11.4 Late Selection 330

11.5 Late Modeling and Composition 333
11.6 Ad hoc Composition 336
11.7 Iterative Refinement 337
11.8 Summary 339
Exercises 340

12 Constraint-Based Process Models 341
12.1 Motivation 341
12.2 Modeling Constraint-Based Processes 342
12.2.1 Constraint-Based Process Models 343
12.2.2 Overview of Control Flow Constraints 344
12.3 Executing Constraint-Based Processes 351
12.3.1 Executing Constraint-Based Models Without Overlapping Activities 353
12.3.2 Executing Constraint-Based Models with Overlapping Activities 355
12.4 Verifying Constraint-Based Process Models 357
12.5 Adapting and Evolving Constraint-Based Process Models 359
12.6 Assistance for Modeling and Evolving Constraint-Based Processes 364
12.6.1 Understandability and Maintainability Issues of Constraint-Based Process Models 364
12.6.2 Test-Driven Modeling of Constraint-Based Process Models 365
12.7 Assistance for Executing Constraint-Based Process Models 367
12.8 Combining Constraint-Based and Prespecified Models 369
12.9 Summary and Discussion 370
Exercises 371

Part IV User- and Data-Driven Processes

13 User- and Data-Driven Processes 377
13.1 Introduction 377
13.2 The Case Handling Paradigm 379
13.2.1 Basic Concepts 379
13.2.2 Strengths and Weaknesses 381
13.2.3 Discussion 383
13.3 Object-Aware Processes 384
13.3.1 Object Behavior 386
13.3.2 Object Interactions 387
13.3.3 Data-Driven Execution 388
13.3.4 Variable Activity Granularity 389
13.3.5 Integrated Access to Business Processes and Objects 390
13.4 Existing Approaches 391
13.4.1 Case Handling 392
13.4.2 Proclets 393

13.4.3 Business Artifacts 394
13.4.4 Data-Driven Process Coordination 396
13.4.5 Product-Based Workflow Support 397
13.4.6 Other Approaches 399
13.4.7 Discussion 399
13.5 Summary 400
Exercises 401

14 A Framework for Object-Aware Processes 405
14.1 Introduction 405
14.2 Overview of the Framework 407
14.3 Data Model 409
14.3.1 Object Relationships 410
14.3.2 Integrating Users 411
14.4 Micro Processes 414
14.4.1 Micro Steps 415
14.4.2 Process States 416
14.4.3 Internal Micro Transitions 417
14.4.4 External Micro Transitions 419
14.4.5 Further Issues 421
14.5 Process and Data Authorization 422
14.5.1 Authorization Table 422
14.5.2 Automatic Generation of Form-Based Activities 424
14.6 Macro Processes 426
14.6.1 Basic Elements 427
14.6.2 Process Context Coordination Component 428
14.6.3 Aggregation Coordination Component 430
14.6.4 Transverse Coordination Component 431
14.6.5 Integrating Black-Box Activities 432
14.6.6 Further Aspects 433
14.7 Discussion 434
14.8 Summary 437
Exercises 437

Part V Technologies Enabling Flexibility Support in Process-Aware Information Systems

15 AristaFlow BPM Suite 441
15.1 Introduction 441
15.2 Handling Errors and Exceptions in AristaFlow 442
15.2.1 Illustrating Application Scenario 442
15.2.2 Perspectives on the Handling of Exceptions and Errors 444
15.3 System Architecture 454

15.4 Using the AristaFlow BPM Suite in Actual Practice 457
15.4.1 Case Study 1: Disaster Management 457
15.4.2 Case Study 2: Health Care Process Management 459
15.4.3 Case Study 3: Software Engineering Processes 460
15.4.4 Other Case Studies 461
15.5 Summary 461
Exercises 462

16 Alaska Simulator Toolset 465
16.1 Motivation 465
16.2 Alaska Simulator Toolset: Meta-Model 466
16.3 Deciding at the Last Responsible Moment 471
16.4 Architecture of Alaska Simulator Toolset 471
16.5 Case Studies: Using Alaska Simulator Toolset in Practice 473
16.6 Summary 476
Exercises 477

17 Existing Tool Support for Flexible Processes 479
17.1 Selected Tools 479
17.2 Further Tools 480

Part VI Summary, References, and Appendices

18 Epilogue 483
18.1 Enabling Flexibility in Process-Aware Information Systems 484
18.2 Open Challenges 485

A Overview of BPMN Elements 489
