1	Superconductors and Superconductivity: General Issues	1
1.1	Superconductivity Discovery	1
1.2	Progress and Prognosis of Superconductivity Applications. . .	5
1.2.1	Technical Directions	8
1.2.2	Electronics.	9
1.2.3	Transportation	15
1.2.4	Medicine	18
1.2.5	Mechanical Systems	19
1.2.6	Scientific Research	20
1.2.7	Electric Power	25
1.3	Superconductivity Phenomena	30
1.3.1	Critical Field	30
1.3.2	Critical Current	31
1.3.3	The Meissner Effect	32
1.3.4	Equipotential Lines for Superconductive Inclusion . .	35
1.3.5	The Cooper Effect	36
1.3.6	The Isotope Effect	38
1.3.7	Penetration Depth and Coherence Length	38
1.3.8	Weak Superconductivity and the Josephson Effects	40
1.4	Type-I Superconductors.	43
1.4.1	Magnetic Properties of Type-I Superconductors	43
1.4.2	The Intermediate State	45
1.4.3	Intermediate State and Scaling Laws.	47
1.5	Type-II Superconductors	49
1.6	Theories of Superconductivity	50

1.7	Connection of Superconductivity with Other Physical Researches	59
1.7.1	Development of Common Research Methods of Superconductivity, Condensed Matter Physics, Electromagnetism and Gravitation	59
1.7.2	Spontaneous Symmetry Breaking or on Connection Between Superconductivity and Elementary Particle Physics	61
1.7.3	Field Theory and Study of Superconducting Phase Transition	66
1.7.4	Optical Conductivity and Spatial Heterogeneity of HTSC	68
1.7.5	Analogy Between Superconducting Current and Laser	71
2	High-Temperature Superconductors. Overview	73
2.1	General Remarks on Type-II Superconductors	73
2.2	High-Temperature Superconductive Cuprates	75
2.2.1	Doping of Cuprates	75
2.2.2	Anderson Phase Diagram of Cuprate Superconductivity	79
2.2.3	Influence of High Pressure on Superconductivity	82
2.2.4	Specific-Heat Anomaly at Temperature of Superconducting Transition in HTSC	87
2.2.5	Coherence Length and HTSC Anisotropy	89
2.2.6	Vortex Structure of HTSC and Magnetic Flux Pinning	92
2.2.7	Interactions of Vortices with Pinning Centers	96
2.2.8	Future Studies of Vortex State	99
2.2.9	Energy Gap Properties of Superconductors	101
2.3	High-Temperature Superconductive Oxypnictides	105
2.4	Future Studies of High-Temperature Superconductivity Mechanism	109
2.5	Weak Links and Josephson Junctions	111
2.5.1	Classification of Josephson Junctions	113
2.5.2	Tunneling Junctions Based on High-Temperature Superconductors	115
3	Composition Features and HTSC Preparation Techniques	125
3.1	YBCO Films and Coated Conductors	125
3.2	BSCCO Films, Tapes and Wires	137
3.3	Films and Wires, Based on Thallium and Mercurial Cuprates	151
3.4	BSCCO Bulks	153

3.5	Y(RE)BCO Bulks	160
3.6	Superconductive Pnictides	168
4	Experimental Investigations of HTSC	171
4.1	Experimental Methods of HTSC Investigations	171
4.1.1	Special Techniques	171
4.1.2	ARPES	176
4.1.3	Measuring Methods of Mechanical and Strength Properties	179
4.1.4	Acoustic Emission Method	184
4.1.5	Optical Interferometry	192
4.2	Intergranular Boundaries in HTSC	199
4.3	Superconducting Composites, Based on BSCCO	211
4.3.1	BSCCO/Ag Tapes	211
4.3.2	Irreversibility Lines for BSCCO	224
4.3.3	BSCCO Bulks	226
4.4	Melt-Processed Y(RE)BCO	239
4.4.1	Microstructure Features	239
4.4.2	Growth Processes in Seeded Sample	242
4.4.3	Behavior of 211(422) Disperse Phase	246
4.4.4	Effects of Doping Additives	254
4.4.5	Mechanical Loading Effects	261
4.4.6	Mechanical and Strength Properties	263
5	Carbon Problem	273
5.1	YBCO System	273
5.2	BSCCO Systems	282
5.3	Carbon Embrittlement and Fracture of YBCO Superconductor	285
5.3.1	Mathematical Model for Carbonate Precipitation and Fracture	286
5.3.2	Discussion of Results	294
5.4	Modeling of Carbon Segregation and Fracture Processes of HTSC	296
5.4.1	Equilibrium Slow and Fast Crack Growth	297
5.4.2	Steady-State Crack Growth	300
5.4.3	Some Numerical Results	303
6	General Aspects of HTSC Modeling	307
6.1	Yield Criteria and Flow Rules for HTSC Powders Compaction	309
6.1.1	HTSC Compaction and Yield Criterion	310
6.1.2	Non-Associated Plasticity of HTSC Powders	312

6.2	Void Transformations during Sintering of Sample	318
6.2.1	Void Separation from Intergranular Boundary	320
6.2.2	Size Trajectories in the Pore/Grain Boundary System During Sintering	327
6.2.3	Estimation of Pore Separation Effects for HTSC	335
6.3	Modeling Epitaxial Growth of Thin Films	337
6.3.1	Sharp Interface Formulation	338
6.3.2	Epitaxial Growth Involving Elasticity	345
6.4	HTSC Microstructure Formation During Sintering	348
6.5	Microcracking of Intergranular Boundaries at Sample Cooling	352
6.6	Study of Statistical Properties of the Model Structures	355
6.7	Modeling of Macrocracks	358
7	Modeling of BSCCO Systems and Composites	365
7.1	Transformation of Bi-2212 to Bi-2223 Phase	365
7.1.1	Edge Dislocations as Channels for Fast Ion Diffusion	366
7.1.2	The Layer-Rigidity Model	367
7.1.3	Dynamics of Bi-2223 Phase Growth	371
7.1.4	Formation Energy of Bi-2223 Phase	374
7.1.5	Effect of Deformation on Bi-2212/Bi-2223 Transformation	376
7.2	Modeling of Preparation Processes for BSCCO/Ag Tapes	379
7.2.1	Sample Texturing by External Magnetic Field	379
7.2.2	Deformation at Tape Cooling	381
7.2.3	Effects of Mechanical Loading	382
7.2.4	Mathematical Modeling of Cold Drawing of Filamentary Composites	388
7.2.5	Mathematical Modeling of Cold Rolling	397
7.2.6	Finite-Element Modeling of Deformation Processes	401
8	Modeling of YBCO Oxide Superconductors	407
8.1	Modeling of 123 Phase Solidification from Liquid	407
8.1.1	Heterogeneous Mechanism	407
8.1.2	Models Based on Yttrium Diffusion in Liquid	407
8.1.3	Models Based on Interface Phenomena	414
8.1.4	Models of Platelets-Like Growth of 123 Phase	420
8.1.5	Modeling of Solidification Kinetics	427
8.1.6	Multi-phase Field Method	430
8.2	Stress–Strain State of HTSC in Applied Magnetic Fields	435

9	Modeling Conductive and Elastic Properties of Superconductive Composites	439
9.1	Effective Conductivity of Superconductive Composites	440
9.1.1	Two-Phase Composites with Phase-Interchange Properties	440
9.1.2	Conductivity of Composites with Periodic Arrays of Superconductive Inclusions	442
9.1.3	Effective Medium Approximation for Definition of Effective Conductivity of Superconductive Composite	443
9.1.4	Cluster Expansions	446
9.1.5	Strong Contrast Expansions	447
9.1.6	Strong Bound Estimations	449
9.1.7	Improved Estimations of Range Bounds for Effective Conductivity of Superconductive Composites	452
9.2	Effective Elasticity of Superconductive Composites	455
9.2.1	Effective Medium Approximations for Definition of Effective Elastic Moduli	456
9.2.2	Strong Bound Estimations for Elastic Properties	457
9.3	Couples Between Conductivity and Elastic Properties	459
9.4	Asymptotical Methods for Definition of Properties of Superconductive Composites	463
9.4.1	Conductivity of Filamentary Composites	464
9.4.2	Conductivity of Granular Composites	474
9.4.3	Effective Elastic Properties of Composites	480
10	Computer Simulation of HTSC Microstructure and Toughening Mechanisms	483
10.1	YBCO Ceramic Sintering and Fracture	483
10.1.1	Sintering Model of Superconducting Ceramic	483
10.1.2	Ceramic Cracking During Cooling	486
10.1.3	Formation of Microcracks around 211 Particles in 123 Matrix	488
10.1.4	Fracture Features at External Loading	492
10.1.5	Crack Tip Shielding Introduced its Geometry	494
10.1.6	Microcracking Process Zone Near Macrocrack	498
10.1.7	Crack Branching	502
10.1.8	Crack Bridging	504
10.1.9	Some Numerical Results	510
10.2	Crack Shielding Processes in Ferroelastics and Ferroelectrics	516
10.2.1	Ferroelastics and Ferroelectrics with Effect of Negative Stiffness of Components	517

10.2.2	Fracture Features in Domain Structure of Ferroelectric.	525
10.2.3	Domain Structure and Fracture of Ferroelectric Ceramic	529
10.2.4	Influence of Domain Switching Near the Crack on Fracture Toughness	532
10.2.5	Thermodynamics of Martensitic Transformation in HTSC	536
10.2.6	About Toughening of Superconducting Ceramics	539
10.3	Toughening Mechanisms for Large-Grain YBCO.	542
10.3.1	Model Representations	542
10.3.2	Effect of 211 Particles on YBCO Fracture.	544
10.3.3	Some Numerical Results	549
10.4	Fatigue Fracture	549
10.4.1	Nucleation and Growth Mechanisms of Short Cracks	550
10.4.2	Crack Closure Mechanisms	552
10.5	Small Cyclic Fatigue of YBCO Ceramics	553
10.5.1	Model Representations	553
10.5.2	Microstructure Dissimilitude Effect.	554
10.5.3	Fracture Energy and Microstructure Features.	557
10.5.4	Some Numerical Results	560
10.6	Residual Thermal Stresses in YBCO/Ag Composite	560
10.7	Toughening of Bi-2223 Bulk, Fabricated by Hot-Pressing Method.	562
10.7.1	Microstructure Formation by Processing	562
10.7.2	Bi-2223 Toughening by Silver Dispersion	566
11	Mechanical Destructions of HTSC Josephson Junctions and Composites.	569
11.1	Interface Fracture	570
11.2	Thin Films on Substrates.	574
11.3	Step-Edge Junctions	578
11.4	Transverse Fracture.	581
11.5	HTSC Systems of S–N–S Type	585
11.6	Toughening Mechanisms.	587
11.7	Charts of Material Properties and Fracture.	589
11.8	Concluding Remarks.	593
12	Modeling of Electromagnetic and Superconducting Properties of HTSC	595
12.1	Modeling of Intercrystalline Dislocations.	595
12.2	Current-Limiting Mechanisms and Grain Boundary Pinning.	600

12.3	Vortex Structures and Current Lines in HTSC with Defects.	602
12.4	Non-Linear Current in Superconductors with Obstacles.	608
12.5	Double Critical-State Model for Type-II Superconductors	616
12.6	Current Percolation and Pinning of Magnetic Flux in HTSC	618
12.6.1	Model of Non-Linear Resistor Network.	620
12.6.2	Simulation of Current Percolation and Magnetic Flux in YBCO Coated Conductors	628
12.6.3	Modeling of Electromagnetic Properties of BSCCO/Ag Tapes.	631
12.6.4	Aging at Mechanical Loading	635
12.6.5	Effective Electrical Conductivity of Superconducting Oxide Systems	638
Appendix A: Classification of Superconductors		645
Appendix B: Implementation of Carbon-Induced Embrittlement Model		677
Appendix C: Macrostructure Modeling of Heat Conduction		683
Appendix D: Computational Algorithms for Definition of Structure-Sensitive Properties of Some HTSC Ceramics and Composites		699
Appendix E: Eden Model		709
