

# Contents

<b>1</b>	<b>Introduction</b>	1
1.1	Notation	10
	References	10
<b>2</b>	<b>Feynman Integrals: Basic Definitions and Tools</b>	11
2.1	Feynman Rules and Feynman Integrals	11
2.2	Divergences	14
2.3	Alpha Representation	19
2.4	Regularization	21
2.5	Properties of Dimensionally Regularized Feynman Integrals.	26
	References	30
<b>3</b>	<b>Evaluating by Alpha and Feynman Parameters</b>	33
3.1	Simple One- and Two-Loop Formulae	33
3.2	Auxiliary Tricks	37
3.2.1	Recursively One-Loop Feynman Integrals	37
3.2.2	Partial Fractions	38
3.2.3	Dealing with Numerators	38
3.3	One-Loop Examples	41
3.4	Feynman Parameters	45
3.5	Two-Loop Examples	48
	Reference	58
<b>4</b>	<b>Sector Decompositions</b>	61
4.1	Hepp and Speer Sectors	62
4.2	Recursive Sector Decompositions	68
4.3	Geometrical Sector Decompositions	72
4.4	Analysis of Convergence and a Definition of Dimensionally Regularized UV and IR Divergent Feynman Integrals.	75
	References	80

<b>5</b>	<b>Evaluating by MB Representation . . . . .</b>	<b>83</b>
5.1	A One-Loop Example . . . . .	84
5.2	Evaluating Multiple MB Integrals . . . . .	89
5.3	How to Derive and Check MB Representations . . . . .	90
5.4	Two Basic Strategies of Resolving Singularities in $\epsilon$ . . . . .	100
5.5	Two-Loop Examples . . . . .	102
5.6	Examples with the Old Strategy A . . . . .	106
5.7	Applying MB Representation to Expand Feynman Integrals in Momenta and Masses . . . . .	119
5.8	Combining MB Representation with Sector Decompositions to Expand Feynman Integrals . . . . .	121
5.9	Conclusion . . . . .	123
	References . . . . .	124
<b>6</b>	<b>IBP and Reduction to Master Integrals . . . . .</b>	<b>127</b>
6.1	Solving IBP Relations by Hand . . . . .	128
6.2	General Setup for IBP Reduction . . . . .	134
6.3	Laporta's Algorithm . . . . .	136
6.4	Algebraic Structure of IBP Relations . . . . .	138
6.5	Baikov's Method . . . . .	140
6.6	Shifting Dimension and Gröbner Bases . . . . .	148
6.7	Obtaining Additional Relations . . . . .	151
6.8	Conclusion . . . . .	153
	References . . . . .	154
<b>7</b>	<b>Evaluation by Differential Equations . . . . .</b>	<b>157</b>
7.1	One-Loop Examples . . . . .	157
7.2	Two-Loop Example . . . . .	163
7.3	Three-Loop Example . . . . .	167
7.4	Conclusion . . . . .	169
	References . . . . .	171
<b>8</b>	<b>Evaluating Master Integrals by Dimensional Recurrence and Analyticity . . . . .</b>	<b>173</b>
8.1	Dimensional Recurrence Relations . . . . .	173
8.2	General Prescriptions . . . . .	175
8.3	Multiloop Examples . . . . .	179
8.4	Evaluating Multicomponent Master Integrals . . . . .	193
8.5	What Numbers Can Appear in Epsilon Expansions? . . . . .	200
	References . . . . .	202
