

Contents

1	Preamble	1
2	Introduction and Basic Theory	3
2.1	A Classical Mechanical Harmonic Oscillator	3
2.1.1	Normal Modes of Coupled Harmonic Oscillators	7
2.2	A Quantum Mechanical Harmonic Oscillator	9
2.2.1	Quantum States	11
2.2.2	Phase-Space Distribution	12
2.3	Radiation Pressure	14
2.3.1	Classical Analysis	16
2.3.2	Quantum Analysis	18
2.3.3	Quantum Opto-Mechanics	21
2.3.4	SQL + Backaction	22
2.3.5	Strong Coupling	23
2.3.6	Optomechanical Entanglement	27
	References	30
3	Experimental Techniques	35
3.1	Fiber-Interferometer	35
3.2	Optical Resonators	35
3.2.1	Fabry-Pérot Cavity	36
3.2.2	Ring Cavity	41
3.3	Locking Techniques	41
3.3.1	Pound-Drever-Hall	42
3.3.2	Tilt Locking	45
3.3.3	Experimental Locking	48
3.4	Experimental Setup	51
3.4.1	Two-Color Setup	51
3.4.2	Laser Systems	53
3.4.3	Cavities	54
3.4.4	Imaging and Miscellaneous	56

3.5	Acousto-Optic Modulator	57
3.6	Homodyne Detection	59
3.7	Data Acquisition	65
3.8	Data Analysis	66
3.9	Calibration	67
3.10	Effective Mass.	69
3.11	Cryogenic Operation of an Optical Cavity	70
3.11.1	Continuous-Flow ^4He Cryostat	71
3.11.2	Closed-Cycle ^4He Cryostat	73
3.11.3	Dilution Refrigerator	74
	References	78
4	High-Reflectivity, High-Q Mechanical Resonators	81
4.1	$\text{Ta}_2\text{O}_5/\text{SiO}_2$ Distributed Bragg Reflector Resonators.	82
4.2	$\text{Si}_3\text{N}_4 + \text{Ta}_2\text{O}_5/\text{SiO}_2$ Resonators	84
4.3	$\text{Si} + \text{Ta}_2\text{O}_5/\text{SiO}_2$ Resonators.	85
4.4	$\text{Al}_x\text{Ga}_{1-x}\text{As}$ Resonators.	89
4.5	FEM Simulations	96
	References	96
5	Mechanical Laser Cooling in Cryogenic Cavities.	101
5.1	Radiation-Pressure Self-Cooling of a Micromirror in a Cryogenic Environment	101
5.2	Demonstration of an Ultracold Micro-Optomechanical Oscillator in a Cryogenic Cavity	110
	References	119
6	Opto-Mechanics in the Strong Coupling Regime	123
	References	130
7	Optomechanical Down-Conversion	133
	Reference	136
8	Conclusions and Outlook	137
	References	138
	Author Biography	139

Quantum Opto-Mechanics with Micromirrors
Combining Nano-Mechanics with Quantum Optics
Gröblacher, S.
2012, XII, 144 p.,
ISBN: 978-3-642-34955-3
