1	Introduction	1
	References	3
2	Motivation and Outline	5
3	Theory	7
3.1	Synthesis of Polymeric Colloidal Particles	7
3.1.1	Miniemulsion Polymerization	7
3.1.2	Emulsion Polymerization	9
3.1.3	Summary and Comparison Between Miniemulsion and Emulsion Polymerization	11
3.2	Forces at Work in Colloidal Stability and Crystallization	11
3.2.1	Colloid Stability in Aqueous Dispersions	12
3.2.2	Colloids at Interfaces	16
3.3	Two-Dimensional Colloidal Crystallization	20
3.3.1	Close-Packed Colloidal Monolayers	21
3.3.2	Non-Close-Packed Monolayers	32
3.3.3	Binary Colloidal Monolayers	35
3.4	Preparation of Nanostructures on Surfaces	39
3.4.1	Colloidal Lithography	41
3.4.2	Micellar Lithography	42
3.4.3	Non-conventional Colloidal Lithography	42
3.4.4	Applications of Colloidal Monolayers and Surface Nanostructures Fabricated by Colloidal Lithography	43
3.5	Localized Surface Plasmon Resonances: A Fundamental Properties of Metallic Nanostructures	44
3.5.1	Localized Surface Plasmon Resonances	44

3.5.2	Sensing with Localized Surface Plasmons	47
3.5.3	Plasmon Hybridization.	48
	References	49
4	Characterization Methods	55
4.1	Atomic Force Microscopy	55
4.2	Inductively Coupled Plasma Optical Emission Spectrometry.	56
4.3	Two-Dimensional Chemistry and Physics on a Langmuir Trough	58
4.4	Scanning Electron Microscopy	59
4.5	Spinning Drop Tensiometry	61
	References	61
5	Results and Discussion	63
5.1	Particle Synthesis and Characterization	65
5.1.1	Accurate Elemental Analysis of Metal-Containing Polymer Latexes Using Inductively Coupled Plasma: Optical Emission Spectrometry.	65
5.1.2	Synthesis of Metal-Complex Containing Latex Particles	81
5.2	Assembly of Colloidal Monolayer Architectures	108
5.2.1	Convenient Production of Close-Packed Monolayers Using Direct Assembly at the Air/Water Interface	108
5.2.2	Non-Close-Packed Monolayers by Plasma Induced Size Reduction	113
5.2.3	Ordered Binary Monolayers with Adjustable Stoichiometries	128
5.3	Lithographic Processes Using Colloidal Monolayers	145
5.3.1	Arrays of Metal Nanoparticles by a Non-conventional Lithographic Process	145
5.3.2	Plasmonic Structures from Non-close Packed Monolayers	153
5.3.3	Laterally Patterned, Ultraflat Substrates by Colloidal Lithography and Their Applications	185
	References	200
6	Experimental Section	207
6.1	General Procedures	207
6.1.1	Miniemulsion Polymerization	207
6.1.2	Surfactant-Free Emulsion Polymerization.	207
6.1.3	Treatment of Silicon Wafer Substrates Prior Use	209
6.1.4	Scanning Electron Microscopy	209
6.1.5	UV/Vis–NIR Spectroscopy.	209
6.1.6	Photographs	210

6.2	Materials	210
6.3	Experimental Details for Accurate Elemental Analysis of Metal-Containing Polymer Latexes Using Inductively Coupled Plasma: Optical Emission Spectrometry.	210
6.3.1	Particle Synthesis	210
6.3.2	Zeta Potential Measurements	210
6.3.3	Inductively Coupled Plasma: Optical Emission Spectrometry Measurements	211
6.4	Experimental Details for Synthesis of Metal-Complex Containing Latex Particles	212
6.4.1	Platinum-Complex Containing Polymer Particles by Emulsion Polymerization.	212
6.4.2	Spinning Drop Tensiometry Measurements to Investigate the Interfacial Behavior of the Metal- β -diketonate Complexes	212
6.4.3	Miniemulsion Polymerization Containing $\text{Fe}(\text{acac})_3$ and $\text{Pt}(\text{acac})_2$	213
6.4.4	Seeded Emulsion Polymerization	215
6.5	Experimental Details for Assembly of Colloidal Monolayer Architectures	215
6.5.1	Convenient Production of Close-Packed Monolayers Using Direct Assembly at the Air/Water Interface	215
6.5.2	Non-close Packed Monolayers by Plasma Etching	215
6.5.3	Ordered Binary Monolayers with Adjustable Stoichiometries	216
6.6	Experimental Details for Lithographic Processes Using Colloidal Monolayers	217
6.6.1	Non-conventional Lithography with Platinum Containing Particles	218
6.6.2	Experimental Procedure for Iron-Platinum Containing Polystyrene Particles	219
6.7	Experimental Details for Plasmonic Structures from Non-close Packed Monolayers.	220
6.7.1	Fabrication of Arrays of Single Crescents	220
6.7.2	Stacked Double Crescent Arrays.	220
6.7.3	Opposing Double Crescent Structures	222
6.8	Experimental Details for Laterally Patterned, Ultraflat Substrates by Colloidal Lithography and Their Applications	223
6.8.1	Fabrication of Surface Embedded Particles	223
6.8.2	Layer by Layer Deposition of Polyelectrolytes	223
6.8.3	Nanoscale Patterning of Bilayer Model Membranes	224
	References	225

7	Summary and Outlook	227
7.1	Monolayer Assembly Processes	227
7.1.1	Monolayers to go	227
7.1.2	Non-Close-Packed Architectures	228
7.1.3	Binary Monolayers	228
7.2	Lithographic Processes	229
7.2.1	Non-conventional Lithography	229
7.2.2	Plasmon Dimer Architectures	229
7.2.3	Ultraflat Substrates	230
7.3	Outlook	230
	Curriculum Vitae and List of Publications	233

Surface Patterning with Colloidal Monolayers

Vogel, N.

2012, XVI, 236 p.,

ISBN: 978-3-642-35133-4
