
Contents

1	Natural Calamities and Their Forecasting	1
1.1	Natural Calamities of Geological Origin	4
1.1.1	Earthquakes	4
1.1.2	Volcanic Eruptions	7
1.1.3	Tsunami	12
1.2	Meteorological Natural Calamities	17
1.2.1	Cyclones, Tornados, Squalls, Typhoons, and Hurricanes	17
1.2.2	Floods	19
1.2.3	Droughts and Fires	21
1.3	The Aftermath of a Natural Calamity	24
1.3.1	Killed and Injured	25
1.3.2	Economic Damage	29
1.4	Aerospace Predictions of Geological Natural Calamities	31
1.4.1	Earthquake Precursors and Their Detection	35
1.4.2	Volcanic Eruption Precursors and Their Detection	55
1.4.3	Detecting Geological Calamity Precursors from Space	61
1.4.4	Problems in Practical Prediction of Seismic Activity and Their Solutions	66
	References	74
	Further Reading	81
2	Technogenic Emergencies: Can They Be Reliably Predicted?	83
2.1	Technogenic Disasters in the Modern World: Classification, Facts, Consequences, and Tendencies	84
2.2	Man-Made Disasters and Emergencies in Russia: Causes and Consequences	92
2.3	Harbingers of Technogenic Emergencies and Ways to Forecast Them	105
2.4	Geodynamics, Seismic Location, and Prospects for Forecasting Technogenic Emergencies	109

2.5 Forecasting of Man-Made Disasters and the Role of Space Systems in its Practical Implementation	119
References	124
Further Reading	125
3 Global Risks and Threats to Humanity from Outer Space:	
Prospects of Warning and Parrying	127
3.1 The Risk and Threat from Asteroids and Comets: Are They Really Dangerous?	128
3.1.1 Historical Background of the Hazards of Near-Earth Objects: Some Estimates of Collision Risks	136
3.1.2 NEO Detection, Impact Predictions, and Early-Warning Efforts	140
3.2 Contemporary NEO Collision Avoidance Strategies	157
3.2.1 Common Approaches to Parrying the Threat of NEOs	157
3.2.2 Planetary Defense Concept	176
3.2.3 Some Principles Concerning the Adaptation of Space Rocketry Facilities for Asteroid and Comet Threat Mitigation Missions (Russian Approach)	182
3.3 Other Global Risks and Threats in Space and from Outer Space	190
3.3.1 Risks and Threats from Solar Activity and Solar Cycle Variations	190
3.3.2 Risks and Threats from Space Junk (Debris)	199
3.3.3 Risks and Threats to Humanity Connected with Abnormal Events	214
References	225
Further Reading	232
4 The Conception of the International Global Monitoring	
Aerospace System (IGMASS)	233
4.1 Analysis of the Development of the Emergency Monitoring Space Facilities	237
4.2 Purpose of the Creation of IGMASS and Its Missions	241
4.3 The Main Principles of the Creation of IGMASS and General Requirements for the System	243
4.4 Structure and Formation of IGMASS	245
4.5 Organizational and Technical Background of IGMASS Project Implementation	250
4.6 Stages of IGMASS Project Realization	253
4.7 Some Cost Estimates of IGMASS Project Implementation	259
References	261
Further Reading	261

5 Space Exploration and Formation of the “Information Field of Global Security”: A New Paradigm of Sustainable Development	263
5.1 Space Facilities and the Formation of the Information Society of the Twenty-First Century	264
5.2 Humanitarian Aspects of IGMASS Project Implementation	273
5.2.1 Distance Learning and Distribution of Space Education	273
5.2.2 Telemedicine and Emergency Medicine	299
5.3 The IGMASS Project as a Potential Tool for Evolving the “Planetary Security Information Field”	305
References	311
Conclusion	313
Glossary	325
