## Contents

|   |            |
|---|------------|
| <b>Brain iron metabolism and its perturbation in neurological diseases . . . . .</b>  | <b>1</b>   |
| Robert R. Crichton, David T. Dexter, and Roberta J. Ward  |            |
| <b>Brain changes in iron loading disorders . . . . .</b>  | <b>17</b>  |
| Elizabeth Milward, Bulent Acikyo, Brianna Bassett, Evan Williams, Ross Graham, Roheeth Delima, Deborah Trinder, John Olynyk, and Daniel Johnstone |            |
| <b>The role of metal ions in dopaminergic neuron degeneration in Parkinsonism and Parkinson's disease . . . . .</b>                               | <b>31</b>  |
| Irmgard Paris and Juan Segura-Aguilar   |            |
| <b>Iron, cysteine and neurodegeneration during Parkinson's disease . . . . .</b>  | <b>41</b>  |
| Eleni Siakkou and Guy N.L. Jameson  |            |
| <b>Copper uptake and trafficking in the brain . . . . .</b>   | <b>47</b>  |
| Guido Crisponi, Valeria Marina Nurchi, Clara Gerosa, Daniela Fanni, Sonia Nemolato, and Gavino Faa  |            |
| <b>Prion diseases and manganism . . . . .</b>   | <b>65</b>  |
| Yuzo Nishida  |            |
| <b>Metal ions and beta amyloid: conformational modifications and biological aspects . . . . .</b>   | <b>77</b>  |
| Alberto Granzotto and Paolo Zatta   |            |
| <b>Beta-amyloid toxicity increases with hydrophobicity in the presence of metal ions . . . . .</b>  | <b>85</b>  |
| Alberto Granzotto, Silvia Bolognin, Janez Scancar, Radmila Milacic, and Paolo Zatta   |            |
| <b>Aluminium in the human brain . . . . .</b>   | <b>95</b>  |
| Christopher Exley and Emily R. House  |            |
| <b>Aluminium-dependent human diseases and chelating properties of aluminium chelators for biomedical applications . . . . .</b>                   | <b>103</b> |
| Valeria Marina Nurchi, Guido Crisponi, Valerio Bertolasi, Gavino Faa, and Maurizio Remelli  |            |
| <b>Aluminum increases toxic effects of amyloid <math>\beta</math>-peptides on the human erythrocyte membrane and molecular models . . . . .</b>   | <b>125</b> |
| Mario Suwalsky, Pedro L. Hernandez, and Carlos P. Sotomayor   |            |
| <b>Oxidative stress in neurodegeneration: targeting mitochondria as a therapeutic aid . . . . .</b>   | <b>137</b> |
| Elena Gaggelli and Gianni Valensin  |            |

|  |     |
|--|-----|
| <b>The chemical mechanism of oxidative stress by copper(II) and iron(III) ions in several neurodegenerative disorders . . . . .</b>                  | 163 |
| Yuzo Nishida   |     |
| <b>Metal ion roles and responses in the CNS under toxic organophosphonate exposure: traces of understanding and various open questions . . . . .</b> | 173 |
| Olga G. Tsay, Kibong Kim, and David G. Churchill   |     |
| <b>Heavy metals, behavior, and neurodegeneration: using <i>Caenorhabditis elegans</i> to untangle a can of worms . . . . .</b>                       | 177 |
| Samuel Caito and Michael Aschner   |     |
| <b>The effect of point mutations on copper(II) complexes with peptide fragments encompassing the 106–114 region of human prion protein . . . . .</b> | 189 |
| Csilla Kállay, Ildikó Turi, Sarolta Timári, Zoltán Nagy, Daniele Sanna, Giuseppe Pappalardo, Paolo de Bona, Enrico Rizzarelli, and Imre Sóvágó       |     |
| <b>Interactions of pyridinecarboxylic acid chelators with brain metal ions: Cu(II), Zn(II), and Al(III) . . . . .</b>                                | 199 |
| Éva Sija, Annalisa Dean, Tamás Jakusch, Valerio B. Di Marco, Alfonso Venzo, and Tamás Kiss   |     |
| <b>Spatially resolved imaging methods to probe metals in the brain: from subcellular to organ level . . . . .</b>                                    | 211 |
| Sylvain Bohic, Dominic Hare, Alexia Daoust, Peter Cloetens, and Emmanuel L. Barbier  |     |
| <b>ICP-MS for the neurodegenerative and brain sciences . . . . .</b>   | 223 |
| Yonghwang Ha, Olga G. Tsay, and David G. Churchill   |     |
| <b>Index . . . . .</b>   | 239 |

**Metal Ions in Neurological Systems**

Linert, W.; Kozłowski, H. (Eds.)

2012, XIV, 246 p., Hardcover

ISBN: 978-3-7091-1000-3
