
Contents of Volume 1

Part 1 Introduction

1 Lectins: An Overview	3
G.S. Gupta	
1.1 Lectins: Characteristics and Diversity	3
1.1.1 Characteristics	3
1.1.2 Lectins from Plants	4
1.1.3 Lectins in Microorganisms	5
1.1.4 Animal Lectins	5
1.2 The Animal Lectin Families	5
1.2.1 Structural Classification of Lectins	5
1.3 C-Type Lectins (CLEC)	8
1.3.1 Identification of CLEC	8
1.3.2 C-Type Lectin Like Domain (CTLD/CLRD)	8
1.3.3 Classification of CLRD-Containing Proteins	9
1.3.4 The CLRD Fold	9
1.4 Disulfide Bonds in Lectins and Secondary Structure	10
1.4.1 Disulfide Bond	10
1.4.2 Pathway for Disulfide Bond Formation in the ER of Eukaryotic Cells	10
1.4.3 Arrangement of Disulfide Bonds in CLRDs	10
1.4.4 Functional Role of Disulfides in CLRD of Vertebrates	11
1.4.5 Disulfide Bonds in Ca ²⁺ -Independent Lectins	12
1.5 Functions of Lectins	12
1.5.1 Lectins in Immune System	13
1.5.2 Lectins in Nervous Tissue	15
1.6 The Sugar Code and the Lectins as Receptors in System Biology	15
1.6.1 Host-Pathogen Interactions	16
1.6.2 Altered Glycosylation in Cancer Cells	17
1.6.3 Protein-Carbohydrate Interactions in Immune System	18
1.6.4 Glycosylation and the Immune System	19
1.6.5 Principles of Protein-Glycan Interactions	19
1.7 Applications of Lectin Research and Future Perspectives	21
1.7.1 Mannose Receptor-Targeted Vaccines	21
References	22

Part II Intracellular Lectins

2 Lectins in Quality Control: Calnexin and Calreticulin	29
G.S. Gupta	
2.1 Chaperons	29
2.1.1 Calnexin	30
2.1.2 Calnexin Structure	30
2.1.3 Calnexin Binds High-Mannose-Type Oligosaccharides	31
2.1.4 Functions of Calnexin	32
2.1.5 Patho-Physiology of Calnexin Deficiency	35
2.2 Calreticulin	36
2.2.1 General Features	36
2.2.2 The Protein	37
2.2.3 Cellular Localization of Calreticulin	40
2.2.4 Functions of Calreticulin	41
2.2.5 Structure-Function Relationships in Calnexin and Calreticulin	48
2.2.6 Pathophysiological Implications of Calreticulin	48
2.2.7 Similarities and Differences Between Cnx and Crt	50
2.2.8 Calreticulin in Invertebrates	51
References	52
3 P-Type Lectins: Cation-Dependent Mannose-6-Phosphate Receptor	57
G.S. Gupta	
3.1 The Biosynthetic/Secretory/Endosomal Pathways	57
3.1.1 Organization of Secretory Pathway	57
3.2 P-Type Lectin Family: The Mannose 6-Phosphate Receptors	62
3.2.1 Fibroblasts MPRs	63
3.2.2 MPRs in Liver	63
3.2.3 MPRs in CNS	63
3.2.4 CI-MPR in Bone Cells	64
3.2.5 Thyroid Follicle Cells	64
3.2.6 Testis and Sperm	64
3.2.7 MPRs During Embryogenesis	65
3.3 Cation-Dependent Mannose 6-Phosphate Receptor	65
3.3.1 CD-MPR- An Overview	65
3.3.2 Human CD-MPR	66
3.3.3 Mouse CD-MPR	66
3.4 Structural Insights	67
3.4.1 N-Glycosylation Sites in CD-MPR	67
3.4.2 3-D Structure of CD-MPR	67
3.4.3 Carbohydrate Binding Sites in MPRs	70
3.4.4 Similarities and Dis-similarities between two MPRs	70
3.5 Functional Mechanisms	71
3.5.1 Sorting of Cargo at TGN	71
3.5.2 TGN Exit Signal Uncovering Enzyme	72
3.5.3 Association of Clathrin-Coated Vesicles with Adaptor Proteins	72
3.5.4 Role of Di-leucine-based Motifs in Cytoplasmic Domains	73
3.5.5 Sorting Signals in Endosomes	74
3.5.6 Palmitoylation of CD-MPR is Required for Correct Trafficking	74
References	75

4 P-Type Lectins: Cation-Independent Mannose-6-Phosphate Receptors	81
G.S. Gupta	
4.1 Cation-Independent Mannose 6-Phosphate Receptor (CD222)	81
4.1.1 Glycoprotein Receptors for Insulin and Insulin-like Growth Factors	81
4.2 Characterization of CI-MPR/IGF2R	81
4.2.1 Primary Structures of Human CI-MPR and IGF2R Are Identical . . .	81
4.2.2 Mouse IGF2R/CI-MPR Gene	82
4.2.3 Bovine CI-MPR	82
4.2.4 CI-MPR in Other Species	83
4.3 Structure of CI-MPR	84
4.3.1 Domain Characteristics of IGF2R/CI-MPR (M6P/IGF2R)	84
4.3.2 Crystal Structure	85
4.4 Ligands of IGF2R/CI-MPR	86
4.4.1 Extracellular Ligands of IGF2R/CI-MPR	86
4.4.2 Binding Site for M6P in CI-MPR	86
4.4.3 The Non-M6P-Containing Class of Ligands	89
4.5 Complementary Functions of Two MPRS	90
4.5.1 Why Two MPRS	91
4.5.2 Cell Signaling Pathways	92
4.6 Functions of CI-MPR	92
4.7 Proteins Associated with Trafficking of CI-MPR	94
4.7.1 Adaptor Protein Complexes	94
4.7.2 Mammalian TGN Golgins	95
4.7.3 TIP47: A Cargo Selection Device for MPR Trafficking	95
4.7.4 Sorting Signals in GGA and MPRS at TGN	95
4.8 Retrieval of CI-MPR from Endosome-TO-GOLGI	97
4.8.1 Endosome-to-Golgi Retrieval of CIMPR Requires Retromer Complex	97
4.8.2 Retromer Complex and Sorting Nexins (SNX)	98
4.8.3 Small GTPases in Lysosome Biogenesis and Transport	100
4.8.4 Role for Dynamin in Late Endosome Dynamics and Trafficking of CI-MPR	100
4.9 CI-MPR/IGF2R System and Pathology	100
4.9.1 Deficiency of IGF2R/CI-MPR Induces Myocardial Hypertrophy . . .	100
4.9.2 MPRS in Neuromuscular Diseases	101
4.9.3 CI-MPR in Fanconi syndrome	101
4.9.4 Tumor Suppressive Effect of CI-MPR/IGF2R	101
References	102
5 Mannose-6-Phosphate Receptor Homologous Protein Family	109
G.S. Gupta	
5.1 Recognition of High-Mannose Type N-Glycans in ERAD Pathways	109
5.2 Proteins Containing M6PRH Domains	110
5.3 GlcNAc-Phosphotransferase	110
5.4 α -Glucosidase II	112
5.4.1 Function of α -Glucosidase II	112
5.4.2 M6PRH Domain in GII β	113
5.4.3 Two Distinct Domains of β -Subunit of GII Interact with α -Subunit	113
5.4.4 Polycystic Liver Disease (PCLD) and β -Subunit of Glucosidase II	114

5.5	Osteosarcomas-9 (OS-9)	115
5.5.1	The Protein	115
5.5.2	Requirement of HRD1, SEL1L, and OS-9/XTP3-B for Disposal of ERAD-Substrates	115
5.5.3	OS-9 Recognizes Mannose-Trimmed N-Glycans	116
5.5.4	Dual Task for Xbp1-Responsive OS-9 Variants	116
5.5.5	Interactions of OS-9	116
5.6	YOS9 from <i>S. cerevisiae</i>	118
5.7	Erlectin/XTP3-B	119
5.8	<i>Drosophila</i> Lysosomal Enzyme Receptor Protein (LERP)	119
5.9	MRL1	119
	References	120
6	Lectins of ERAD Pathway: F-Box Proteins and M-Type Lectins	123
	G.S. Gupta	
6.1	Intracellular Functions of N-Linked Glycans in Quality Control	123
6.2	The Degradation Pathway for Misfolded Glycoproteins	124
6.2.1	Endoplasmic Reticulum-Associated Degradation (ERAD)	124
6.2.2	Ubiquitin-Mediated Proteolysis	124
6.2.3	SCF Complex	125
6.2.4	F-Box Proteins: Recognition of Target Proteins by Protein-Protein Interactions	126
6.3	F-Box Proteins with a C-Terminal Sugar-Binding Domain (SBD)	127
6.3.1	Diversity in SCF Complex due to Lectin Activity of F-Box Proteins	127
6.3.2	Fbs Family	128
6.3.3	Fbs1 Equivalent Proteins	131
6.3.4	Ligands for F-Box Proteins	133
6.3.5	Evolution of F-Box Proteins	134
6.3.6	Localization of F-Box Proteins	134
6.3.7	Regulation of F-Box Proteins	134
6.4	α -Mannosidases and M-Type Lectins	135
6.4.1	α -Mannosidases	135
6.4.2	ER-associated Degradation-enhancing α -Mannosidase-like Proteins (EDEMs)	135
6.4.3	Functions of M-Type Lectins in ERAD	136
6.5	Derlin-1, -2 and -3	138
	References	139

Part III L-Type Lectins

7	L-Type Lectins in ER-Golgi Intermediate Compartment	145
	G.S. Gupta	
7.1	L-Type Lectins	145
7.1.1	Lectins from Leguminous Plants	145
7.1.2	L-Type Lectins in Animals and Other Species	145
7.2	ER-Golgi Intermediate Compartment	146
7.3	Lectins of Secretory Pathway	146
7.4	ER-Golgi Intermediate Compartment Marker-53 (ERGIC-53) or LMAN1	147
7.4.1	ERGIC-53 Is Mannose-Selective Human Homologue of Leguminous Lectins	147
7.4.2	Cells of Monocytic Lineage Express MR60: A Homologue of ERGIC-53	148

7.4.3	Rat Homologue of ERGIC53/MR60	149
7.4.4	Structure-Function Relations	150
7.4.5	Functions of ERGIC-53	152
7.4.6	Mutations in ERGIC-53 <i>LMAN1</i> Gene and Deficiency of Coagulation Factors V and VIII lead to bleeding disorder	154
7.5	Vesicular Integral Membrane Protein (VIP36) OR LMAN2	156
7.5.1	The Protein	156
7.5.2	VIP36-SP-FP as Cargo Receptor	157
7.5.3	Structure for Recognition of High Mannose Type Glycoproteins by VIP36	157
7.5.4	Emp47p of <i>S. cerevisiae</i> : A Homologue to VIP36 and ERGIC-53	158
7.6	VIP36-Like (VIPL) L-Type Lectin	158
	References	159

8 Pentraxins: The L-Type Lectins and the C-Reactive Protein as a Cardiovascular Risk

	G.S. Gupta	
8.1	Pentraxins and Related Proteins	163
8.2	Short Pentraxins	163
8.3	C-Reactive Protein	164
8.3.1	General	164
8.3.2	CRP Protein	164
8.3.3	Structure of CRP	165
8.3.4	Functions of CRP	166
8.4	CRP: A Marker for Cardiovascular Risk	168
8.4.1	CRP: A Marker for Inflammation and Infection	168
8.4.2	CRP: A Marker for Cardiovascular Risk	169
8.4.3	Role of Modified/Monomeric CRP	170
8.5	Extra-Hepatic Sources of CRP	171
8.6	Serum Amyloid P Component	171
8.6.1	Genes Encoding SAP	171
8.6.2	Characterization of SAP	172
8.6.3	Interactions of SAP and CRP	173
8.6.4	Functions of SAP	174
8.6.5	SAP in Human Diseases	175
8.6.6	SAP from <i>Limulus Polyphemus</i>	176
8.7	Female Protein (FP) in Syrian Hamster	176
8.7.1	Similarity of Female Protein to CRP and APC	176
8.7.2	Structure of Female Protein	177
8.7.3	Gene Structure and Expression of FP	177
8.8	Long Pentraxins	178
8.8.1	Long Pentraxins 1, -2, -3	178
8.9	Neuronal Pentraxins (Pentraxin-1 and -2)	178
8.9.1	Functions of Pentraxin 1 and -2	178
8.10	Pentraxin 3 (PTX3)	179
8.10.1	Characterization of PTX3	179
8.10.2	Cellular Sources of PTX3	180
8.10.3	Ligands	180
8.10.4	Regulation of PTX3	181
8.10.5	Functions of PTX3	182
	References	183

Part IV Animal Galectins

9 Overview of Animal Galectins: Proto-Type Subfamily	191
Anita Gupta and G.S. Gupta	
9.1 Galectins	191
9.2 Galectin Sub-Families	191
9.3 Galectin Ligands	192
9.4 Functions of Galectins	192
9.4.1 Functional Overlap/Divergence Among Galectins	193
9.4.2 Cell Homeostasis by Galectins	193
9.4.3 Immunological Functions	195
9.4.4 Signal Transduction by Galectins	196
9.4.5 Common Structural Features in Galectins	197
9.4.6 Galectin Subtypes in Tissue Distribution	198
9.5 Prototype Galectins (Mono-CRD Type)	199
9.5.1 Galectin-1	199
9.5.2 Galectin-2	199
9.5.3 Galectin-5	202
9.5.4 Galectin-7	202
9.5.5 Galectin-10 (Eosinophil Charcot-Leyden Crystal Protein)	203
9.5.6 Galectin-Related Inter-Fiber Protein (Griffin/Galectin-11)	204
9.5.7 Galectin-13 (Placental Protein -13)	205
9.5.8 Galectin 14	206
9.5.9 Galectin-15	206
9.6 Evolution of Galectins	207
9.6.1 Phylogenetic Analysis of Galectin Family	207
9.6.2 Galectins in Lower Vertebrates	207
References	208
10 Galectin-1: Forms and Functions	213
Anita Gupta	
10.1 The Subcellular Distribution	213
10.2 Molecular Characteristics	213
10.2.1 Galectin-1 Gene	213
10.2.2 X-Ray Structure of Human Gal-1	214
10.2.3 Gal-1 from Toad (<i>Bufo arenarum</i> Hensel) Ovary	216
10.2.4 GRIFIN Homologue in Zebrafish (DrGRIFIN)	216
10.3 Regulation of <i>Gal-1</i> Gene	216
10.3.1 Gal-1 in IMP1 Deficient Mice	216
10.3.2 Blimp-1 Induces Galectin-1 Expression	217
10.3.3 Regulation by Retinoic Acid	217
10.3.4 Regulation by TGF- β , IL-12 and FosB Gene Products	218
10.3.5 Regulation by Metabolites/Drugs/Other Agents	218
10.4 Gal-1 in Cell Signaling	220
10.5 Ligands/Receptors of Gal-1	220
10.5.1 Each Galectin Recognizes Different Glycan Structures	220
10.5.2 Interactions of Galectin-1	221
10.6 Functions of Galectin-1	223
10.6.1 Role of Galectin-1 in Apoptosis	223
10.6.2 Gal-1 in Cell Growth and Differentiation	225
10.6.3 Gal-1 and Ras in Cell Transformation	227
10.6.4 Development of Nerve Structure	228
10.6.5 Skeletal Muscle Development	232

10.6.6	Gal-1 and the Immune System	232
10.6.7	Role of Galectin-1 and Other Systems	235
	References	236
11	Tandem-Repeat Type Galectins	245
	Anita Gupta	
11.1	Galectin 4	245
11.1.1	Localization and Tissue Distribution	245
11.1.2	Galectin-4 Isoforms	246
11.1.3	Gal-4 from Rodents and Other Animals	247
11.1.4	Ligands for Galectin-4	248
11.1.5	Functions of Galectin-4	249
11.1.6	Galectin-4 in Cancer	251
11.2	Galectin-6	251
11.3	Galectin-8	251
11.3.1	Galectin-8 Characteristics	251
11.3.2	Functions of Galectin-8	253
11.3.3	Clinical Relevance of Gal-8	253
11.3.4	Isoforms of Galectin-8 in Cancer	253
11.4	Galectin-9	254
11.4.1	Characteristics	254
11.4.2	Stimulation of Galectin-9 Expression by IFN- γ	254
11.4.3	Crystal Structure of Galectin-9	255
11.4.4	Galectin-9 Recognizes <i>L. major</i> Poly- β -galactosyl Epitopes	255
11.4.5	Functions of Galectin-9	255
11.4.6	Galectin-9 in Clinical Disorders	257
11.4.7	Galectin-9 in Cancer	258
11.5	Galectin-12	259
	References	260
12	Galectin-3: Forms, Functions, and Clinical Manifestations	265
	Anita Gupta	
12.1	General Characteristics	265
12.1.1	Galectin-3 Structure	265
12.1.2	Galectin-3 Gene	266
12.1.3	Tissue and Cellular Distribution	266
12.2	Ligands for Galectin-3: Binding Interactions	268
12.2.1	Extracellular Matrix and Membrane Proteins	268
12.2.2	Intracellular Ligands	268
12.2.3	Carbohydrate Binding	269
12.2.4	Carbohydrate-Independent Binding	271
12.3	Functions	271
12.3.1	Galectin-3 is a Multifunctional Protein	271
12.3.2	Role in Cell Adhesion	272
12.3.3	Gal-3 at the Interface of Innate and Adaptive Immunity	272
12.3.4	Regulation of T-Cell Functions	274
12.3.5	Pro-apoptotic and Anti-apoptotic Effects	274
12.3.6	Role in Inflammation	276
12.3.7	Gal-3 in Wnt Signaling	278
12.3.8	In Urinary System of Adult Mice	278
12.3.9	Gal-3 in Reproductive Tissues	278
12.3.10	Gal-3 on Chondrocytes	278
12.3.11	Role of Gal-3 in Endothelial Cell Motility and Angiogenesis	279
12.3.12	Role in CNS	279

12.4	Clinical Manifestations of Gal-3	279
12.4.1	Advanced Glycation End Products (AGES)	279
12.4.2	GAL-3 and Protein Kinase C in Cholesteatoma	280
12.4.3	Gal-3 and Cardiac Dysfunction	280
12.4.4	Gal-3 and Obesity	281
12.4.5	Autoimmune Diseases	281
12.4.6	Myofibroblast Activation and Hepatic Fibrosis	282
12.5	Gal-3 as a Pattern Recognition Receptor	282
12.5.1	Gal-3 Binds to <i>Helicobacter pylori</i>	282
12.5.2	Recognition of <i>Candida albicans</i> by Macrophages Requires Gal-3	282
12.5.3	Gal-3 is Involved in Murine Intestinal Nematode and Schistosoma Infection	283

Contents of Volume 2

Part VIII C-Type Lectins: Collectins

22 C-Type Lectins Family	473
Anita Gupta and G.S. Gupta	
22.1 C-Type Lectins Family	473
22.1.1 The C-Type Lectins (CLEC)	473
22.1.2 C-Type Lectin Like Domain (CLRD/CTLD)	473
22.1.3 The CLRD Fold	474
22.1.4 Ligand Binding	477
22.1.5 C-Type Lectin-Like Domains in Model Organisms	477
22.2 Classification of CLRD/CTLD-Containing Proteins	477
22.3 Disulfide Bonds in Lectins and Secondary Structure	478
22.3.1 Arrangement of Disulfide Bonds in CTLDs	478
22.3.2 Functional Role of Disulfides in CTLD of Vertebrates	478
22.4 Collectins	480
22.4.1 Collectins: A Group of Collagenous Type of Lectins	480
References	480
23 Collectins: Mannan-Binding Protein as a Model Lectin	483
Anita Gupta	
23.1 Collectins	483
23.1.1 N-Terminal Region	484
23.1.2 Collagenous Region	484
23.1.3 C-Type Lectin Domain	485
23.1.4 Comparative Genetics of Collagenous Lectins	486
23.1.5 Generalized Functions of Collectins	486
23.2 Human Mannan-Binding Protein	487
23.2.1 Characterization of Serum MBL	487
23.2.2 Gene Structure of MBP	489
23.2.3 Regulation of MBP Gene	490
23.2.4 Structure-Function Relations	491
23.2.5 Functions of MBL	492
23.3 MBP/MBL from Other Species	494
23.3.1 Rodents	494
23.3.2 Primates MBL	495
23.4 Similarity Between C1Q and Collectins/Defense Collagens	495
23.4.1 Structural Similarities	495
23.4.2 Functional Similarities	496
23.4.3 Receptors for Defense Collagens	496

41.2	CD93 or C1q Receptor (C1qRp): A Receptor for Complement C1q	901
41.2.1	CD93 Is Identical to C1qRp	901
41.2.2	Characterization of CD93/C1qRp	902
41.2.3	Two Types of Cell Surface C1q-Binding Proteins (C1qR)	902
41.2.4	Tissue Expression and Regulation of CD93/C1qRp	903

41.2.5	Functions	904
41.2.6	CD93 in Pathogenesis of SLE	904
41.3	Murine Homologue of Human C1qRp (AA4)	905
41.4	The gC1qR (p33, p32, C1qBP, TAP)	906
41.4.1	A Multi-Multifunctional Protein - Binding with C1q	906
41.4.2	Human gC1qR/p32 (C1qBP) Gene	907
41.4.3	Ligand Interactions	908
41.4.4	Role in Pathology	909
41.5	Thrombomodulin	910
41.5.1	Localization	910
41.5.2	Characteristics	910
41.5.3	Regulation of TM Activity	910
41.5.4	Structure-Function Relations - Binding to Thrombin	911
41.5.5	The Crystal Structure	913
41.5.6	Functions	914
41.5.7	Abnormalities Associated with Thrombomodulin Deficiency	916
41.6	Endosialin (Tumor Endothelial Marker-1 or CD248)	917
41.6.1	A Marker of Tumor Endothelium	917
41.6.2	Interactions with Ligands	918
41.6.3	Functions	919
41.7	Bimlec (DEC 205 Associated C-type lectin-1 or DCL-1) or (CD302) (Group XV of CTLD)	920
41.8	Proteins Containing SCP, EGF, EGF and CTLD (SEEC) (Group XVI of CTLD)	920
41.8.1	Nematocyst Outer Wall Antigen (NOWA)	921
41.8.2	The Cysteine-Rich Secretory Proteins (CRISP) Super-Family	921
41.9	Calx- <i>b</i> and CTLD Containing Protein (CBCP) (Group XVII of CTLD)	922
41.9.1	CBCP/Frem1/QBRICK	922
41.9.2	Frem3	924
41.9.3	Zebrafish Orthologues of FRAS1, FREM1, or FREM2	924
	References	924

Part XIV Clinical Significance of Animal Lectins

42	MBL Deficiency as Risk of Infection and Autoimmunity	933
	Anita Gupta	
42.1	Pathogen Recognition	933
42.1.1	MBL Characteristics	933
42.1.2	Pathogen Recognition and Role in Innate Immunity	933
42.2	MBL Deficiency as Risk of Infection and Autoimmunity	935
42.2.1	MBL Deficiency and Genotyping	935
42.2.2	MBL and Viral Infections	938
42.3	Autoimmune and Inflammatory Diseases	939
42.3.1	MBL Gene in Rheumatoid Arthritis	939
42.3.2	Systemic Lupus Erythematosus	940
42.3.3	Systemic Inflammatory Response Syndrome/Sepsis	941
42.3.4	MBL and Inflammatory Bowel Diseases	942
42.3.5	Rheumatic Heart Disease	943
42.3.6	MBL in Cardio-Vascular Complications	944
42.3.7	Other Inflammatory Disorders	945
42.4	Significance of MBL Gene in Transplantation	946
42.5	MBL in Tumorigenesis	947
42.5.1	Polymorphisms in the Promoter	947
42.5.2	MBL Binding with Tumor Cells	947

42.6	Complications Associated with Chemotherapy	947
42.6.1	Neutropenia	947
42.6.2	Animal Studies	948
42.7	MBL: A Reconstitution Therapy	949
	References	949
43	Pulmonary Collectins in Diagnosis and Prevention of Lung Diseases	955
	Anita Gupta	
43.1	Pulmonary Surfactant	955
43.2	SP-A and SP-D in Interstitial Lung Disease	955
43.2.1	Pneumonitis	955
43.2.2	Interstitial Pneumonia (IP)	956
43.2.3	ILD Due to Inhaled Substances	957
43.2.4	Idiopathic Pulmonary Fibrosis	957
43.2.5	Cystic Fibrosis	958
43.2.6	Familial Interstitial Lung Disease	959
43.3	Connective Tissue Disorders	959
43.3.1	Systemic Sclerosis	959
43.3.2	Sarcoidosis	960
43.4	Pulmonary Alveolar Proteinosis	960
43.4.1	Idiopathic Pulmonary Alveolar Proteinosis	960
43.4.2	Structural Changes in SPs in PAP	961
43.5	Respiratory-Distress Syndrome and Acute Lung Injury	961
43.5.1	ARDS and Acute Lung Injury	961
43.5.2	Bronchopulmonary Dysplasia (BPD)	962
43.6	Chronic Obstructive Pulmonary Disease (COPD)	963
43.6.1	COPD as a Group of Diseases	963
43.6.2	Emphysema	964
43.6.3	Allergic Disorders	964
43.6.4	Interactions of SP-A and SP-D with Pathogens and Infectious Diseases	965
43.7	Pulmonary Tuberculosis	966
43.7.1	Enhanced Phagocytosis of <i>M. tuberculosis</i> by SP-A	966
43.7.2	SP-A Modulates Inflammatory Response in AΦs During Tuberculosis	967
43.7.3	Marker Alleles in <i>M. tuberculosis</i>	968
43.7.4	Interaction of SP-D with <i>M. tuberculosis</i>	968
43.7.5	Association of SPs with Diabetes	969
43.8	Expression of SPs in Lung Cancer	969
43.8.1	Non-Small-Cell Lung Carcinoma (NSCLC)	969
43.9	Other Inflammatory Disorders	971
43.9.1	Airway Inflammation in Children with Tracheostomy	971
43.9.2	Surfactant Proteins in Non-ILD Pulmonary Conditions	971
43.10	DNA Polymorphisms in SPs and Pulmonary Diseases	972
43.10.1	Association Between SP-A Gene Polymorphisms and RDS	972
43.10.2	SP-A and SP-B as Interactive Genetic Determinants of Neonatal RDS	973
43.10.3	RDS in Premature Infants	973
43.10.4	Gene Polymorphism in Patients of High-altitude Pulmonary Edema	973
43.10.5	SNPs in Pulmonary Diseases	974
43.10.6	Allergic Bronchopulmonary Aspergillosis and Chronic Cavitary Pulmonary Aspergillosis (CCPA)	974
43.10.7	Autoreactivity Against SP-A and Rheumatoid Arthritis	975

43.11	Inhibition of SP-A Function by Oxidation Intermediates of Nitrite	975
43.11.1	Protein Oxidation by Chronic Pulmonary Diseases	975
43.11.2	Oxidation Intermediates of Nitrite	976
43.11.3	BPD Treatment with Inhaled NO	976
43.12	Congenital Diaphragmatic Hernia	976
43.13	Protective Effects of SP-A and SP-D on Transplants	977
43.14	Therapeutic Effects of SP-A, SP-D and Their Chimeras	977
43.14.1	SP-A Effects on Inflammation of Mite-sensitized Mice	977
43.14.2	SP-D Increases Apoptosis in Eosinophils of Asthmatics	977
43.14.3	Targeting of Pathogens to Neutrophils Via Chimeric SP-D/Anti-CD89 Protein	978
43.14.4	Anti-IAV and Opsonic Activity of Multimerized Chimeras of rSP-D	978
43.15	Lessons from SP-A and SP-D Deficient Mice	979
	References	980

Animal Lectins: Form, Function and Clinical Applications

Gupta, G.S.

2012, LIV, 1108 p. In 2 volumes, not available
separately., Hardcover

ISBN: 978-3-7091-1064-5
