|---------------------------------------------------------------------------------------|----|
| <b>Contributor</b> .....                                                              | ix |
| <b>1 Introduction</b> .....                                                           | 1  |
| <b>2 Enamine Catalysis</b> .....                                                      | 7  |
| 2.1 Aldol Reactions .....                                                             | 8  |
| 2.1.1 Ketone Donors in Intermolecular Aldol Reactions .....                           | 8  |
| 2.1.2 Aldehyde Donors in Intermolecular Aldol Reactions .....                         | 14 |
| 2.1.3 Intramolecular Aldol Reactions .....                                            | 19 |
| 2.2 Mannich Reactions .....                                                           | 20 |
| 2.3 $\alpha$ -Heterofunctionalizations .....                                          | 23 |
| 2.3.1 $\alpha$ -Hydroxylation .....                                                   | 24 |
| 2.3.2 $\alpha$ -Amination .....                                                       | 26 |
| 2.4 Conjugate Additions .....                                                         | 28 |
| 2.5 Dienamine Catalysis .....                                                         | 34 |
| 2.6 Combined Enamine-Catalyzed Approaches and Cascade<br>Reactions .....              | 36 |
| 2.7 Synopsis .....                                                                    | 41 |
| <b>3 Iminium Catalysis</b> .....                                                      | 45 |
| 3.1 Pericyclic Reactions .....                                                        | 46 |
| 3.1.1 Intermolecular <i>Diels-Alder</i> Reactions .....                               | 46 |
| 3.1.2 Intramolecular <i>Diels-Alder</i> Reactions .....                               | 48 |
| 3.2 Conjugate Additions .....                                                         | 49 |
| 3.2.1 Conjugated Transfer Hydrogenations .....                                        | 49 |
| 3.2.2 Carbon Nucleophiles in <i>Michael</i> -Type Reactions .....                     | 52 |
| 3.2.3 <i>Friedel-Crafts</i> -Type Reactions (Aromatic <i>Michael</i><br>Donors) ..... | 56 |
| 3.2.4 <i>Aza-Michael</i> Reactions .....                                              | 61 |
| 3.2.5 Oxygenations .....                                                              | 62 |

|           |                                                                          |            |
|-----------|--------------------------------------------------------------------------|------------|
| 3.3       | Iminium Catalyzed Organocascade Reactions .....                          | 64         |
| 3.4       | Synopsis .....                                                           | 66         |
| <b>4</b>  | <b>Combined Iminium-Enamine Catalyzed Approaches .....</b>               | <b>69</b>  |
| 4.1       | Cascade Reactions Using a Single Organocatalyst .....                    | 69         |
| 4.2       | Organocascade Catalysis Using a Combination of Different Catalysts ..... | 73         |
| 4.3       | Synopsis .....                                                           | 75         |
| <b>5</b>  | <b>Singly Occupied Molecular Orbital (SOMO) Catalysis .....</b>          | <b>77</b>  |
| 5.1       | <i>Friedel-Crafts</i> Reactions .....                                    | 78         |
| 5.2       | Epoxide Formation .....                                                  | 79         |
| 5.3       | Synopsis .....                                                           | 80         |
| <b>6</b>  | <b>Asymmetric Phase-Transfer Catalysis .....</b>                         | <b>83</b>  |
| 6.1       | Asymmetric $\alpha$ -Alkylations .....                                   | 84         |
| 6.2       | Phase-Transfer Catalyzed <i>Michael</i> Additions .....                  | 90         |
| 6.3       | Alkylative Dearomatization-Annulation Reaction .....                     | 92         |
| 6.4       | Synopsis .....                                                           | 93         |
| <b>7</b>  | <b>Chiral <i>Brønsted</i> Acids and Hydrogen Bonding Donors .....</b>    | <b>97</b>  |
| 7.1       | Chiral Phosphoric Acids .....                                            | 98         |
| 7.2       | Chiral Diols .....                                                       | 102        |
| 7.3       | Chiral (Thio)-Ureas .....                                                | 104        |
| 7.4       | Bifunctional <i>Brønsted</i> Acid–Base Active (Thio)-Ureas .....         | 107        |
| 7.5       | Synopsis .....                                                           | 115        |
| <b>8</b>  | <b>Chiral <i>Brønsted</i> and <i>Lewis</i> Bases .....</b>               | <b>119</b> |
| 8.1       | <i>Cinchona</i> Alkaloids .....                                          | 119        |
| 8.2       | Phosphine Catalysis .....                                                | 129        |
| 8.3       | Carbene Catalysis .....                                                  | 131        |
| 8.4       | Synopsis .....                                                           | 133        |
