
Contents

1	Pricing and hedging	1
1.1	Primary securities and strategies	2
1.1.1	Discrete time markets	2
1.1.2	Self-financing and predictable portfolios	3
1.1.3	Relative portfolio	5
1.1.4	Discounted market	6
1.2	Arbitrage and martingale measures	7
1.3	Pricing and hedging	9
1.3.1	Derivative securities	9
1.3.2	Arbitrage pricing	10
1.3.3	Hedging	13
1.3.4	Put-Call parity	13
1.4	Market models	14
1.4.1	Binomial model	14
1.4.2	Trinomial model	18
1.5	On pricing and hedging in incomplete markets	22
1.6	Change of numeraire	23
1.6.1	A particular case	23
1.6.2	General case	25
1.7	Solved problems	28
2	Portfolio optimization	61
2.1	Maximization of expected utility	62
2.1.1	Strategies with consumption	62
2.1.2	Utility functions	65
2.1.3	Expected utility of terminal wealth	67
2.1.4	Expected utility from intermediate consumption and terminal wealth	70
2.2	“Martingale” method	72
2.2.1	Complete market: terminal wealth	72

2.2.2	Incomplete market: terminal wealth	78
2.2.3	Complete market: intermediate consumption	81
2.2.4	Complete market: intermediate consumption and terminal wealth	86
2.3	Dynamic Programming Method	88
2.3.1	Recursive algorithm	88
2.3.2	Proof of Theorem 2.32	92
2.4	Logarithmic utility: examples	94
2.4.1	Terminal utility in the binomial model: MG method	94
2.4.2	Terminal utility in the binomial model: DP method	96
2.4.3	Terminal utility in the completed trinomial model: MG method	99
2.4.4	Terminal utility in the completed trinomial model: DP method	101
2.4.5	Terminal utility in the standard trinomial model: DP method	103
2.4.6	Intermediate consumption in the binomial model: MG method	106
2.4.7	Intermediate consumption in the binomial model: DP method	109
2.4.8	Intermediate consumption in the completed trinomial model: MG method	113
2.4.9	Optimal consumption in the completed trinomial model: DP method	114
2.4.10	Intermediate consumption in the standard trinomial model: DP method	115
2.5	Solved problems	118
3	American options	165
3.1	American derivatives and early exercise strategies	166
3.1.1	Arbitrage pricing	167
3.1.2	Arbitrage price in a complete market	169
3.1.3	Optimal exercise strategies	175
3.1.4	Hedging strategies	178
3.2	American and European options	180
3.3	Solved problems	183
3.3.1	Preliminaries	183
3.3.2	Solved problems	184
4	Interest rates	223
4.1	Bonds and interest rates	224
4.2	Market models for interest rates	227
4.3	Short models	230
4.3.1	Affine models	232
4.3.2	Discrete time Hull-White model	233

4.4	Forward models	237
4.4.1	Binomial forward model	239
4.4.2	Multinomial forward model	241
4.5	Interest rate derivatives	244
4.5.1	Caps and Floors	244
4.5.2	Interest Rate Swaps	247
4.5.3	Swaptions and Swap Rate	250
4.6	Solved problems	252
4.6.1	Recalling the basic models	252
4.6.2	Options on T -bonds	255
4.6.3	Caps and Floors	262
4.6.4	Swap Rates and Payer Forward Swaps	271
4.6.5	Swaptions	276
