

Contents

1	Introduction to Coherent States	1
1.1	The Weyl–Heisenberg Group and the Canonical Coherent States . .	2
1.1.1	The Weyl–Heisenberg Translation Operator	2
1.1.2	The Coherent States of Arbitrary Profile	6
1.2	The Coherent States of the Harmonic Oscillator	7
1.2.1	Definition and Properties	7
1.2.2	The Time Evolution of the Coherent State for the Harmonic Oscillator Hamiltonian	11
1.2.3	An Over-complete System	12
1.3	From Schrödinger to Bargmann–Fock Representation	16
2	Weyl Quantization and Coherent States	23
2.1	Classical and Quantum Observables	23
2.1.1	Group Invariance of Weyl Quantization	27
2.2	Wigner Functions	28
2.3	Coherent States and Operator Norms Estimates	35
2.4	Product Rule and Applications	40
2.4.1	The Moyal Product	40
2.4.2	Functional Calculus	43
2.4.3	Propagation of Observables	45
2.4.4	Return to Symplectic Invariance of Weyl Quantization . . .	47
2.5	Husimi Functions, Frequency Sets and Propagation	49
2.5.1	Frequency Sets	49
2.5.2	About Frequency Set of Eigenstates	52
2.6	Wick Quantization	52
2.6.1	General Properties	52
2.6.2	Application to Semi-classical Measures	55
3	The Quadratic Hamiltonians	59
3.1	The Propagator of Quadratic Quantum Hamiltonians	59
3.2	The Propagation of Coherent States	61
3.3	The Metaplectic Transformations	69

3.4	Representation of the Quantum Propagator in Terms of the Generator of Squeezed States	71
3.5	Representation of the Weyl Symbol of the Metaplectic Operators	78
3.6	Traps	81
3.6.1	The Classical Motion	81
3.7	The Quantum Evolution	82
4	The Semiclassical Evolution of Gaussian Coherent States	87
4.1	General Results and Assumptions	87
4.1.1	Assumptions and Notations	88
4.1.2	The Semiclassical Evolution of Generalized Coherent States	91
4.1.3	Related Works and Other Results	100
4.2	Application to the Spreading of Quantum Wave Packets	100
4.3	Evolution of Coherent States and Bargmann Transform	103
4.3.1	Formal Computations	103
4.3.2	Weighted Estimates and Fourier–Bargmann Transform	105
4.3.3	Large Time Estimates and Fourier–Bargmann Analysis	107
4.3.4	Exponentially Small Estimates	110
4.4	Application to the Scattering Theory	114
5	Trace Formulas and Coherent States	123
5.1	Introduction	123
5.2	The Semi-classical Gutzwiller Trace Formula	127
5.3	Preparations for the Proof	131
5.4	The Stationary Phase Computation	135
5.5	A Pointwise Trace Formula and Quasi-modes	143
5.5.1	A Pointwise Trace Formula	144
5.5.2	Quasi-modes and Bohr–Sommerfeld Quantization Rules	145
6	Quantization and Coherent States on the 2-Torus	151
6.1	Introduction	151
6.2	The Automorphisms of the 2-Torus	151
6.3	The Kinematics Framework and Quantization	155
6.4	The Coherent States of the Torus	162
6.5	The Weyl and Anti-Wick Quantizations on the 2-Torus	166
6.5.1	The Weyl Quantization on the 2-Torus	166
6.5.2	The Anti-Wick Quantization on the 2-Torus	168
6.6	Quantum Dynamics and Exact Egorov’s Theorem	170
6.6.1	Quantization of $SL(2, \mathbb{Z})$	170
6.6.2	The Egorov Theorem Is Exact	173
6.6.3	Propagation of Coherent States	174
6.7	Equipartition of the Eigenfunctions of Quantized Ergodic Maps on the 2-Torus	175
6.8	Spectral Analysis of Hamiltonian Perturbations	177

7	Spin-Coherent States	183
7.1	Introduction	183
7.2	The Groups $SO(3)$ and $SU(2)$	183
7.3	The Irreducible Representations of $SU(2)$	187
7.3.1	The Irreducible Representations of $\mathfrak{su}(2)$	187
7.3.2	The Irreducible Representations of $SU(2)$	191
7.3.3	Irreducible Representations of $SO(3)$ and Spherical Harmonics	196
7.4	The Coherent States of $SU(2)$	199
7.4.1	Definition and First Properties	199
7.4.2	Some Explicit Formulas	203
7.5	Coherent States on the Riemann Sphere	213
7.6	Application to High Spin Inequalities	216
7.6.1	Berezin–Lieb Inequalities	216
7.6.2	High Spin Estimates	217
7.7	More on High Spin Limit: From Spin-Coherent States to Harmonic-Oscillator Coherent States	220
8	Pseudo-Spin-Coherent States	225
8.1	Introduction to the Geometry of the Pseudo-Sphere, $SO(2, 1)$ and $SU(1, 1)$	225
8.1.1	Minkowski Model	225
8.1.2	Lie Algebra	227
8.1.3	The Disc and the Half-Plane Poincaré Representations of the Pseudo-Sphere	229
8.2	Unitary Representations of $SU(1, 1)$	231
8.2.1	Classification of the Possible Representations of $SU(1, 1)$	233
8.2.2	Discrete Series Representations of $SU(1, 1)$	234
8.2.3	Irreducibility of Discrete Series	238
8.2.4	Principal Series	239
8.2.5	Complementary Series	241
8.2.6	Bosons Systems Realizations	243
8.3	Pseudo-Coherent States for Discrete Series	245
8.3.1	Definition of Coherent States for Discrete Series	245
8.3.2	Some Explicit Formula	246
8.3.3	Bargmann Transform and Large k Limit	250
8.4	Coherent States for the Principal Series	252
8.5	Generator of Squeezed States. Application	252
8.5.1	The Generator of Squeezed States	253
8.5.2	Application to Quantum Dynamics	254
8.6	Wavelets and Pseudo-Spin-Coherent States	258
9	The Coherent States of the Hydrogen Atom	263
9.1	The \mathbb{S}^3 Sphere and the Group $SO(4)$	263
9.1.1	Introduction	263

9.1.2	Irreducible Representations of $SO(4)$	264
9.1.3	Hyperspherical Harmonics and Spectral Decomposition of $\Delta_{\mathbb{S}^3}$	266
9.1.4	The Coherent States for \mathbb{S}^3	268
9.2	The Hydrogen Atom	271
9.2.1	Generalities	271
9.2.2	The Fock Transformation: A Map from $L^2(\mathbb{S}^3)$ to the Pure-Point Subspace of \hat{H}	273
9.3	The Coherent States of the Hydrogen Atom	277
10	Bosonic Coherent States	285
10.1	Introduction	285
10.2	Fock Spaces	286
10.2.1	Bosons and Fermions	286
10.2.2	Bosons	289
10.3	The Bosons Coherent States	292
10.4	The Classical Limit for Large Systems of Bosons	296
10.4.1	Introduction	296
10.4.2	Hepp's Method	297
10.4.3	Remainder Estimates in the Hepp Method	303
10.4.4	Time Evolution of Coherent States	306
11	Fermionic Coherent States	311
11.1	Introduction	311
11.2	From Fermionic Fock Spaces to Grassmann Algebras	312
11.3	Integration on Grassmann Algebra	315
11.3.1	More Properties on Grassmann Algebras	315
11.3.2	Calculus with Grassmann Numbers	317
11.3.3	Gaussian Integrals	318
11.4	Super-Hilbert Spaces and Operators	320
11.4.1	A Space for Fermionic States	320
11.4.2	Integral Kernels	322
11.4.3	A Fourier Transform	323
11.5	Coherent States for Fermions	324
11.5.1	Weyl Translations	324
11.5.2	Fermionic Coherent States	325
11.6	Representations of Operators	327
11.6.1	Trace	328
11.6.2	Representation by Translations and Weyl Quantization	331
11.6.3	Wigner–Weyl Functions	334
11.6.4	The Moyal Product for Fermions	339
11.7	Examples	341
11.7.1	The Fermi Oscillator	341
11.7.2	The Fermi–Dirac Statistics	342
11.7.3	Quadratic Hamiltonians and Coherent States	343
11.7.4	More on Quadratic Propagators	348

12 Supercoherent States—An Introduction	353
12.1 Introduction	353
12.2 Quantum Supersymmetry	354
12.3 Classical Superspaces	356
12.3.1 Morphisms and Spaces	356
12.3.2 Superalgebra Notions	357
12.3.3 Examples of Morphisms	358
12.4 Super-Lie Algebras and Groups	359
12.4.1 Super-Lie Algebras	359
12.4.2 Supermanifolds, a Very Brief Presentation	361
12.4.3 Super-Lie Groups	362
12.5 Classical Supersymmetry	366
12.5.1 A Short Overview of Classical Mechanics	366
12.5.2 Supersymmetric Mechanics	369
12.5.3 Supersymmetric Quantization	374
12.6 Supercoherent States	376
12.7 Phase Space Representations of Super Operators	378
12.8 Application to the Dicke Model	379
Appendix A Tools for Integral Computations	383
A.1 Fourier Transform of Gaussian Functions	383
A.2 Sketch of Proof for Theorem 29	383
A.3 A Determinant Computation	384
A.4 The Saddle Point Method	387
A.4.1 The One Real Variable Case	387
A.4.2 The Complex Variables Case	387
A.5 Kähler Geometry	388
Appendix B Lie Groups and Coherent States	391
B.1 Lie Groups and Coherent States	391
B.2 On Lie Groups and Lie Algebras	391
B.2.1 Lie Algebras	391
B.2.2 Lie Groups	392
B.3 Representations of Lie Groups	395
B.3.1 General Properties of Representations	395
B.3.2 The Compact Case	397
B.3.3 The Non-compact Case	398
B.4 Coherent States According Gilmore–Perelomov	398
Appendix C Berezin Quantization and Coherent States	401
References	405
Index	413

Coherent States and Applications in Mathematical
Physics

Combescure, M.; Robert, D.

2012, XIV, 418 p., Hardcover

ISBN: 978-94-007-0195-3
