

# Contents

- 1 Definitions . . . . . 1**
  - 1.1 The Process . . . . . 1
  - 1.2 The Control . . . . . 3
  - 1.3 The Closed-Loop System . . . . . 5
  - 1.4 The Design Problem . . . . . 6
  - References . . . . . 6
- 2  $H_2$  Performance Criteria . . . . . 7**
  - 2.1 Introduction . . . . . 7
  - 2.2 The Different Criteria . . . . . 8
    - 2.2.1 Reference Tracking—The Model Reference Control . . . . . 8
    - 2.2.2 Noise Rejection—The Minimum Variance Control . . . . . 9
    - 2.2.3 The Composite Performance . . . . . 10
    - 2.2.4 Economy of Control Effort . . . . . 11
  - 2.3 Duality with System Identification—The Ideal Controllers . . . . . 12
    - 2.3.1 Reference Tracking . . . . . 12
    - 2.3.2 Noise Rejection . . . . . 16
    - 2.3.3 The Composite Criterion . . . . . 18
  - 2.4 Beware of What You Ask for—Choosing the Reference Model . . . . . 19
    - 2.4.1 Too Ambitious Performance . . . . . 21
  - 2.5 Chapter Conclusions . . . . . 24
  - References . . . . . 25
- 3 One-Shot Optimization—The VRFT Method . . . . . 27**
  - 3.1 Introduction . . . . . 27
  - 3.2 The Ideal Case . . . . . 27
    - 3.2.1 Generation of the Virtual Reference—A Caveat . . . . . 32
  - 3.3 The Mismatched Case . . . . . 34
  - 3.4 Dealing with Non-minimum Phase Plants . . . . . 39
    - 3.4.1 The Flexible VRFT Criterion . . . . . 41
    - 3.4.2 Implementation Issues . . . . . 43
    - 3.4.3 Two-Step Procedure . . . . . 44

3.5	The Noisy Case . . . . .	45
3.5.1	Choosing the Instrumental Variable . . . . .	47
3.6	Case Studies . . . . .	49
3.6.1	The Need of Instrumental Variables . . . . .	50
3.6.2	Applying the Flexible Criterion . . . . .	54
3.7	Chapter Conclusions . . . . .	65
	References . . . . .	66
<b>4</b>	<b>Iterative Optimization . . . . .</b>	<b>69</b>
4.1	Some Things to Remember from Calculus . . . . .	69
4.2	Optimization Algorithms (Dynamic Systems) . . . . .	72
4.2.1	Autonomous Systems . . . . .	75
4.3	The Basic Algorithms and Their Convergence . . . . .	75
4.3.1	Steepest Descent . . . . .	75
4.3.2	Other Search Directions . . . . .	80
4.3.3	Newton-Raphson . . . . .	81
4.3.4	Robustness . . . . .	85
4.4	Chapter Conclusions . . . . .	87
	References . . . . .	88
<b>5</b>	<b>Convergence to the Globally Optimal Controller . . . . .</b>	<b>89</b>
5.1	$J_y$ —The Reference Tracker . . . . .	90
5.2	$J_e$ —The Variance Minimizer . . . . .	102
5.3	The Mismatched Case . . . . .	104
5.4	Choosing the Algorithm Parameters . . . . .	108
5.4.1	The Search Direction . . . . .	108
5.4.2	The Step Sizes—First Solution . . . . .	109
5.4.3	The Step Sizes—Second Solution . . . . .	110
5.5	A Case Study . . . . .	112
5.6	Chapter Conclusions . . . . .	115
	References . . . . .	117
<b>6</b>	<b>Cost Function Shaping . . . . .</b>	<b>119</b>
6.1	Introduction . . . . .	119
6.2	The Problem Data . . . . .	119
6.3	Cautious Control . . . . .	121
6.4	Manipulation of the Reference Spectrum . . . . .	124
6.4.1	Properties of the Sensitivity . . . . .	125
6.4.2	Applying a Different Reference . . . . .	127
6.4.3	Windowing . . . . .	129
6.5	Case Studies . . . . .	133
6.5.1	A PID Design . . . . .	133
6.5.2	A Noisy Process . . . . .	138
6.6	Chapter Conclusions . . . . .	142
	References . . . . .	144

<b>7</b>	<b>Computations</b>	145
7.1	Iterative Feedback Tuning	146
7.1.1	Derivation	146
7.1.2	Extensions	150
7.2	Frequency Domain Tuning	154
7.2.1	Derivation	155
7.2.2	Extensions	158
7.3	Correlation-Based Tuning	159
7.3.1	Derivation	160
7.4	Chapter Conclusions	163
	References	163
<b>8</b>	<b>Experimental Results</b>	165
8.1	A Liquid Flow Process	166
8.1.1	Direct Method	169
8.1.2	Iterative Method	174
8.2	A DC Motor	177
8.2.1	Direct Method	178
8.2.2	Iterative Method	186
8.3	A Temperature Process	187
8.3.1	The Favorable Scenario	187
8.3.2	Tough Case	194
	References	207

Data-Driven Controller Design

The H2 Approach

Sanfelice Bazanella, A.; Campestri, L.; Eckhard, D.

2012, XX, 208 p., Hardcover

ISBN: 978-94-007-2299-6
