

Contents

1	Introduction to Emissions Trading	1
1.1	Review of International Climate Policies	1
1.1.1	From Rio to Durban	1
1.1.2	The Burgeoning EU CO ₂ Allowance Trading Market	3
1.2	Market Design Issues	4
1.2.1	Initial Allocation Rules	4
1.2.2	Equilibrium Permits Price	5
1.2.3	Spatial and Temporal Limits	6
1.2.4	Safety Valve	10
1.3	Key Features of the EU Emissions Trading Scheme	10
1.3.1	Scope and Allocation	10
1.3.2	Calendar	12
1.3.3	Penalties	12
1.3.4	Market Players	12
1.4	EUA Price Development	13
1.4.1	Structure and Main Features of EU ETS Contracts	13
1.4.2	Carbon Price	14
1.4.3	Descriptive Statistics	15
	References	16
2	CO₂ Price Fundamentals	19
2.1	Institutional Decisions	19
2.1.1	Dummy Variables	19
2.1.2	Structural Breaks	26
2.2	Energy Prices	29
2.2.1	Literature Review	30
2.2.2	Oil, Natural Gas and Coal	31
2.2.3	Electricity Variables	35
2.3	Extreme Weather Events	40
2.3.1	Relationship Between Temperatures and Carbon Prices	41
2.3.2	Empirical Application	43

Appendix	BEKK MGARCH Modeling with CO ₂ and Energy Prices	45
	Problems	48
	References	52
3	Link with the Macroeconomy	55
3.1	Stock and Bonds Markets	55
3.1.1	GARCH Modeling of the Carbon Price	55
3.1.2	Relationship with Stock and Bond Markets	60
3.2	Macroeconomic, Financial and Commodity Indicators	66
3.2.1	Extracting Factors Based on Principal Component Analysis	67
3.2.2	Factor-Augmented VAR Analysis Applied to EUAs	68
3.3	Industrial Production	71
3.3.1	Data	71
3.3.2	Nonlinearity Tests	74
3.3.3	Self-exciting Threshold Autoregressive Models	78
3.3.4	Comparing Smooth Transition and Markov-Switching Autoregressive Models	87
	References	101
4	The Clean Development Mechanism	105
4.1	CERs Contracts and Price Development	105
4.2	Relationship with EU Emissions Allowances	107
4.2.1	VAR Analysis	107
4.2.2	Cointegration	117
4.3	CERs Price Drivers	123
4.3.1	Zivot-Andrews Structural Break Test	124
4.3.2	Regression Analysis	126
4.4	Arbitrage Strategies: The CER-EUA Spread	131
4.4.1	Why So Much Interest in This Spread?	131
4.4.2	Spread Drivers	132
Appendix	Markov Regime-Switching Modeling with EUAs and CERs	133
	Problems	138
	References	145
5	Risk-Hedging Strategies and Portfolio Management	147
5.1	Risk Factors	147
5.1.1	Idiosyncratic Risks	148
5.1.2	Common Risk Factors	149
5.2	Risk Premia	151
5.2.1	Theory on Spot-Futures Relationships in Commodity Markets	151
5.2.2	Bessembinder and Lemmon's (2002) Futures-Spot Structural Model	153
5.2.3	Empirical Application	154
5.3	Managing Carbon Price Risk in the Power Sector	157
5.3.1	Economic Rationale	157
5.3.2	UK Power Sector	158

5.3.3	Factors Influencing Fuel-Switching	159
5.3.4	Econometric Analysis	160
5.3.5	Empirical Results	164
5.3.6	Summary	169
5.4	Portfolio Management	170
5.4.1	Composition of the Portfolio	170
5.4.2	Mean-Variance Optimization and the Portfolio Frontier	171
Appendix	Computing Implied Volatility from Option Prices	173
	Problems	174
	References	177
6	Advanced Topics: Time-to-Maturity and Modeling the Volatility of Carbon Prices	181
6.1	The Relationship Between Volatility and Time-to-Maturity in Carbon Prices	181
6.2	Background on the Samuelson Hypothesis	183
6.3	Data	184
6.3.1	Daily Frequency	184
6.3.2	Intraday Frequency	185
6.4	The ‘Net Carry Cost’ Approach	186
6.4.1	Computational Steps	187
6.4.2	Regression Analysis	188
6.4.3	Empirical Results	189
6.5	GARCH Modeling	190
6.5.1	GARCH Specification	190
6.5.2	Empirical Results	191
6.6	Realized Volatility Modeling	192
6.6.1	Computational Steps	192
6.6.2	Regression Analysis	193
6.6.3	Empirical Results	194
6.6.4	Sensitivity Tests	195
6.7	Summary	200
Appendix	Statistical Techniques to Detect Instability in the Volatility of Carbon Prices	201
	References	206
Solutions		209
A.1	Problems of Chap. 2	209
A.2	Problems of Chap. 4	210
A.3	Problems of Chap. 5	212
Index		213

Econometric Analysis of Carbon Markets

The European Union Emissions Trading Scheme and
the Clean Development Mechanism

Chevallier, J.

2012, XXX, 217 p., Hardcover

ISBN: 978-94-007-2411-2
