1	Introduction	1
1.1	Notable Fractures	1
1.2	Basic Fracture Mechanics Concepts	3
1.2.1	Small Scale Yielding Model	4
1.2.2	Fracture Criteria	4
1.3	Fracture Unit Conversions	5
1.4	Exercises	5
	References	6
2	Linear Elastic Stress Analysis of 2D Cracks	7
2.1	Notation	7
2.2	Introduction	7
2.3	Modes of Fracture	8
2.4	Mode III Field	8
2.4.1	Asymptotic Mode III Field	9
2.4.2	Full Field for Finite Crack in an Infinite Body	13
2.5	Mode I and Mode II Fields	16
2.5.1	Review of Plane Stress and Plane Strain Field Equations	16
2.5.2	Asymptotic Mode I Field	17
2.5.3	Asymptotic Mode II Field	21
2.6	Complex Variables Method for Mode I and Mode II Cracks	21
2.6.1	Westergaard Approach for Mode-I	22
2.6.2	Westergaard Approach for Mode-II	22
2.6.3	General Solution for Internal Crack with Applied Traction	22
2.6.4	Full Stress Field for Mode-I Crack in an Infinite Plate	23
2.6.5	Stress Intensity Factor Under Remote Shear Loading	25
2.6.6	Stress Intensity Factors for Cracks Loaded with Traction	26
2.6.7	Asymptotic Mode I Field Derived from Full Field Solution	26
2.6.8	Asymptotic Mode II Field Derived from Full Field Solution	28
2.6.9	Stress Intensity Factors for Semi-infinite Crack	28
2.7	Some Comments	28

2.7.1	Three-Dimensional Cracks	29
2.8	Exercises	31
	References	32
3	Energy Flows in Elastic Fracture	33
3.1	Generalized Force and Displacement	33
3.1.1	Prescribed Loads	33
3.1.2	Prescribed Displacements	34
3.2	Elastic Strain Energy	35
3.3	Energy Release Rate, G	36
3.3.1	Prescribed Displacement	36
3.3.2	Prescribed Loads	37
3.3.3	General Loading	38
3.4	Interpretation of G from Load-Displacement Records	38
3.4.1	Multiple Specimen Method for Nonlinear Materials	38
3.4.2	Compliance Method for Linearly Elastic Materials	41
3.4.3	Applications of the Compliance Method	42
3.5	Crack Closure Integral for G	43
3.6	G in Terms of K_I , K_{II} , K_{III} for 2D Cracks That Grow Straight Ahead	47
3.6.1	Mode-III Loading	47
3.6.2	Mode I Loading	48
3.6.3	Mode II Loading	48
3.6.4	General Loading (2D Crack)	48
3.7	Contour Integral for G (J -Integral)	49
3.7.1	Two Dimensional Problems	49
3.7.2	Three-Dimensional Problems	51
3.7.3	Example Application of J -Integral	51
3.8	Exercises	52
	References	54
4	Criteria for Elastic Fracture	55
4.1	Introduction	55
4.2	Initiation Under Mode-I Loading	55
4.3	Crack Growth Stability and Resistance Curve	58
4.3.1	Loading by Compliant System	60
4.3.2	Resistance Curve	61
4.4	Mixed-Mode Fracture Initiation and Growth	63
4.4.1	Maximum Hoop Stress Theory	63
4.4.2	Maximum Energy Release Rate Criterion	65
4.4.3	Crack Path Stability Under Pure Mode-I Loading	66
4.4.4	Second Order Theory for Crack Kinking and Turning	69
4.5	Criteria for Fracture in Anisotropic Materials	70
4.6	Crack Growth Under Fatigue Loading	71
4.7	Stress Corrosion Cracking	74
4.8	Exercises	74
	References	76

5	Determining K and G	77
5.1	Analytical Methods	77
5.1.1	Elasticity Theory	77
5.1.2	Energy and Compliance Methods	79
5.2	Stress Intensity Handbooks and Software	80
5.3	Boundary Collocation	80
5.4	Computational Methods: A Primer	84
5.4.1	Stress and Displacement Correlation	84
5.4.2	Global Energy and Compliance	85
5.4.3	Crack Closure Integrals	86
5.4.4	Domain Integral	89
5.4.5	Crack Tip Singular Elements	90
5.4.6	Example Calculations	94
5.5	Experimental Methods	97
5.5.1	Strain Gauge Method	98
5.5.2	Photoelasticity	100
5.5.3	Digital Image Correlation	101
5.5.4	Thermoelastic Method	103
5.6	Exercises	105
	References	106
