Part I Commentary and History—H.H. Pattee

Introduction—What These Papers Are About.....	3
1 Epistemology—The Subject-Object and Symbol-Matter Relation	5
2 Where Did My Interest in the Physics of Life Begin?.....	5
3 The Symbolic and Subjective Aspects of Measurement—The Epistemic Cut	7
4 The Quantum Measurement Problem	8
5 History of Relating Physical Laws and Life	10
6 The Rise of Molecular Biology—Recognizing the Symbol-Matter Problem.....	11
7 Why Life Requires Quantum Measurement	12
8 Beyond Decoherence—The Autonomous Agent and Semiotic Closure	15
9 All Objective Models Are Also Subjective.....	16
10 The Concept of Genetic Language	17
11 The Necessity of Complementary Models.....	18
12 The Origin of My Interest in Symbolic and Dynamic Models	21
13 The Evolutionary Limitations of Programmed Computer Models	24
14 Misconceptions of Physical Laws and Evolution Theory.....	25
15 Significant Differences Between Genetic and Brain-Based Languages	26
16 Will Models of the Brain Improve the Brain’s Models of the Universe?	27
References.....	29

Part II The Pattee Papers in Chronological Order

1 The Physical Basis of Coding and Reliability in Biological Evolution.....	33
1.1 What Is a Theory of Biology?.....	33
1.2 Current Molecular Biological Descriptions	34
1.3 What Is the Question?.....	35
1.4 Two Basic Assumptions	36
1.5 What Are the Physical Laws?	37
1.6 What Is Heredity?.....	38
1.7 The Central Problem	39
1.8 The Classical Evasion of the Central Problem.....	39
1.9 The Reliability Condition for Evolution	41
1.10 The Quantum Theory of Measurement	42
1.11 Enzymes as Measuring Molecules	43
1.12 Design of Origin of Life Experiments.....	45
1.13 Examples of Hereditary Copolymer Reactions.....	46
1.14 The Reliability of Copolymer Catalysts.....	48
1.15 Some Broader Questions.....	50
1.16 Summary	51
Notes and References.....	52
2 How Does a Molecule Become a Message?	55
2.1 Introduction	55
2.2 Some Properties of Languages and Symbols	57
2.3 What Is the Simplest Message?.....	59
2.4 What Is the Simplest Natural Language?.....	60
2.5 The Simplest Artificial Languages.....	61
2.6 The Simulation of Origins.....	63
2.7 The Role of Theory in Biology	65
References.....	66
3 Physical Problems of Decision-Making Constraints.....	69
3.1 Life Depends on Records	70
3.2 Life Depends on Coordinated Constraints	70
3.3 Decisions Require Two Levels of Constraint	71
3.4 Classical and Quantum Mechanical Decisions	72
3.5 The Measurement Problem	73
3.6 The Reading and Writing Problem.....	74
3.7 The Language Problem	75
3.8 The Origin Problem.....	76
3.9 Summary	77
Note.....	78
References.....	78
4 Laws and Constraints, Symbols and Languages.....	81
References.....	89

5	The Physical Basis and Origin of Hierarchical Control	91
5.1	Structural Versus Control Constraints.....	92
5.2	Structure-Function Problem.....	94
5.3	What Is a Control Device?.....	96
5.4	What Is a Constraint?.....	97
5.5	The Principle of Classification of Details	99
5.6	The Principle of Optimum Loss of Detail.....	101
5.7	The Principle of Statistical Closure	102
5.8	Examples of Statistical Closure	103
5.9	The Origin Problem	105
5.10	Summary and Conclusions	107
	Notes	108
	References.....	109
6	Postscript: Unsolved Problems and Potential Applications of Hierarchy Theory	111
6.1	Common Properties of Hierarchies.....	112
6.2	The Central Problem of Hierarchy Theory	114
6.3	Extreme Examples of Structure-Description Relationships	115
6.4	Thoughts on the Root of the Problem.....	117
6.5	More Concrete Examples of the Problem.....	117
6.6	Theories of Origin of Levels—Instabilities and Catastrophes.....	118
6.7	Hierarchy Theory and Systems Theory	120
6.8	Hierarchy Theory and Evolution Theory	121
6.9	Hierarchy Theory and Language Theory	122
	References.....	124
7	Discrete and Continuous Processes in Computers and Brains	125
7.1	Nerve Cells and Switches	125
7.2	Are Discrete Switches Sufficient?	126
7.3	A Physical View of a Switch.....	127
7.4	A Philosophical View of a Switch	128
7.5	An Operational View of a Switch	129
7.6	A Discrete Logical View of a Switch.....	130
7.7	A Continuous Dynamical View of a Switch	131
7.8	A Dissipative View of a Switch	132
7.9	An Evolutionary View of a Switch	134
7.10	Dynamics, Language and Intelligence	135
7.11	Brains, Computers and Intelligence.....	137
	References.....	140
8	The Complementarity Principle in Biological and Social Structures	143
8.1	Introduction.....	143
8.2	The Nature of Complementarity	145
8.3	Generalized Complementarity	146
8.4	Rate-Dependent Laws, Rate-Independent Rules.....	147

8.5	Complementarity Applied to Biological Systems	148
8.6	Complementarity Applied to Social Systems.....	149
8.7	How Are Social Dynamics and Social Policy Distinguished?	151
8.8	Dynamical Instabilities and Control Decisions	151
8.9	Complementarity and the Evolution of Complexity	152
8.10	Conclusion.....	153
	References.....	153
9	Clues from Molecular Symbol Systems	155
9.1	Background.....	155
9.2	The Physics of Symbols.....	156
9.3	The Symbol-Folding Transformation	158
9.4	Is the Folding Transformation Universal?	159
9.5	Conclusion	162
	References.....	162
10	Cell Psychology: An Evolutionary Approach	
	to the Symbol-Matter Problem	165
10.1	Background	165
	10.1.1 What Is the Problem?.....	165
10.2	Simple Psychologies	167
	10.2.1 Cell Psychology	168
	10.2.2 Are Cells Too Simple?	169
10.3	The Facts of Life	169
	10.3.1 Only Symbol-Matter Systems Evolve.....	169
	10.3.2 Molecular Information Processing.....	171
	10.3.3 Molecular Direct Perception.....	171
	10.3.4 The Semantic Closure Principle.....	172
	10.3.5 Natural Versus Artificial Semantic Closure	173
10.4	The Physics of Symbols.....	174
	10.4.1 The Measurement Problem	174
	10.4.2 Laws, Rules, and Representations	175
10.5	Conclusions	177
	References.....	179
11	Universal Principles of Measurement and Language	
	Functions in Evolving Systems	181
11.1	Generalized Measurement.....	182
11.2	Measurement as a Classification	183
11.3	Function Requires Construction.....	185
11.4	Generalized Language.....	186
11.5	Semantic Closure.....	187
11.6	Properties of Generalized Measurement	188
11.7	Properties of Generalized Language	189
11.8	Models of Evolution	189
11.9	Conditions for Artificial Evolving Systems	192
	References.....	194

12	Instabilities and Information in Biological Self-organization	197
12.1	The Necessity of Stability	198
12.2	The Necessity of Instability	199
12.3	The Necessity of Complementarity	201
12.4	The Nature of Dissipative Structures	202
12.5	The Nature of Symbolic Information	203
12.6	Instabilities and Information	205
12.7	Epistemological Limitations	209
	References	210
13	Evolving Self-reference: Matter, Symbols, and Semantic Closure	211
13.1	What Is Self-reference?	211
13.2	What Is Matter?	213
13.3	Material and Symbol Complementarity—Neither Reductionism nor Dualism	214
13.4	What Is Measurement?	214
13.5	What Is a Symbol?	215
13.6	What Is a Symbolic Model?	217
13.7	How to Evade the Matter-Symbol Problem	218
13.8	Self-organization Approaches	219
13.9	The Function of Symbols in Evolution and Cognition	220
13.10	The Role of Matter in Evolution and Cognition	222
13.11	Conclusions	224
	References	225
14	Artificial Life Needs a Real Epistemology	227
14.1	What Can Artificial Life Tell Us About Reality?	227
14.2	Life Requires an Epistemic Cut	228
14.2.1	The Epistemic Cut Requires Implementation	229
14.3	What Is an Epistemology?	230
14.3.1	The Epistemology of Physical Theory	231
14.3.2	Incomplete Knowledge—The Necessity of Statistical Laws	231
14.3.3	Measurement Defines an Epistemic Cut	232
14.4	Artificial Life Requires an Artificial Physics	233
14.5	What Is Computation?	234
14.5.1	Formal Computation	234
14.5.2	Laplacean Computation	235
14.5.3	Computation in the Wild	236
14.5.4	The Programmable Physical Computer	237
14.5.5	Limits of Physical Computation	238
14.5.6	Analog Dynamics	238
14.6	The Epistemology of Organisms	239
14.7	Conclusions	240
	References	241

15	The Problem of Observables in Models of Biological Organizations	245
15.1	Introduction.....	245
15.2	The Nature of Observables in Physical Theory	246
15.3	The Nature of Observation in Living Organisms.....	248
15.4	The Nature of Measurement in Primitive Organisms	249
15.5	Some General Criteria for Measurement Processes.....	250
15.6	The Evolution of Non-observable Constructs.....	251
15.7	Sequential vs. Coherent Hybrid Models	253
15.8	Computer Models.....	254
15.9	Limits of Universality in Physical and Computational Models	254
15.10	Concurrent Distributed Network Models.....	256
15.11	The Complementarity of Physical and Network Models.....	257
	References.....	258
16	Causation, Control, and the Evolution of Complexity	261
16.1	Is Causation a Useful Concept?	261
16.2	Naive Causation Requires a Direction in Time.....	262
16.3	Causation Is Gratuitous in Modern Physics.....	262
16.4	Do Statistical Laws Give a Direction to Time?.....	263
16.5	Measurement Gives a Direction to Time	263
16.6	Universal Causes Are Not Explanatory	264
16.7	Complementary Models Require Complementary Causes	264
16.8	Useful Causation Requires Control	265
16.9	The Origin of Control	266
16.10	Levels of Control Match Models of Causation	267
16.11	Evolution Requires Semiotic Control of Construction	268
16.12	Artificial Dynamics and Self-organization	269
16.13	When Is Downward Causation a Useful Concept?.....	270
16.14	Semantic Closure at the Cognitive Level.....	271
16.15	Conclusion	272
	References.....	273
17	The Necessity of Biosemiotics: Matter-Symbol Complementarity	275
17.1	Life Depends on Semiotic Controls.....	275
17.2	The Relation Between Physical Laws and Control Constraints	276
17.3	Rate-Independent Constraints; Symbol Systems.....	278
17.4	Physical Laws Cannot Address This Question	278
17.5	The Epistemic Process in Biology	279
17.6	Symbolic Control is Necessary for Evolvability.....	280
17.7	Von Neumann's Description and Construction.....	280
17.8	Von Neumann's Logic of Self-Replication	282
17.9	Von Neumann's "More Important" Question.....	283

17.10	Physical Requirements for Efficient Memory	284
17.11	Physical Requirements for Coding and Construction	285
17.12	The Physical Requirements for Folding and Function	285
17.13	The Semiotic Closure Requirement for “Self”	286
17.14	Evolution Requires Population Distributions	287
17.15	Requirements for Efficient Search and Selection	288
17.16	Analogies and Disanalogies of Genetics with Natural Language	289
	Notes	290
	References	291

Part III Afterword - Joanna Rączaszek-Leonardi

Language as a System of Replicable Constraints.....	295
1 Information in Biology: The Complementarity of Dynamics and Symbols	298
1.1 Control in Living Systems Requires Complementary Models	299
1.2 Rethinking the Nature of Symbols	300
2 Delimiting the Scope of Generalization	304
2.1 On symbols Tame and Wild: Natural Language is not a Formal System of Symbols	304
2.2 On coding and Meaning: Natural Language is not a Code.....	307
3 Language as a System of Selected, Replicable Constraints	310
3.1 Soundwaves with a History	311
3.2 Controlled Collectivity	317
3.3 Referential Properties of Linguistic Symbols.....	318
3.4 Conditions on Arbitrariness	319
3.5 Example of a Difference: Fast Replication of Un-Coded Forms	321
4 Further Along the Third Path of Complementarity.....	322
4.1 “Symbolic” vs. “Dynamic” in Cognitive Science.....	322
4.2 “Symbolic” with “Dynamic” in Cognitive Science.....	325
4.3 Complementarity of the Brain Models	326
References.....	328

LAWS, LANGUAGE and LIFE

Howard Pattee's classic papers on the physics of
symbols with contemporary commentary

Pattee, H.H.; Rączaszek-Leonardi, J.

2012, XVI, 336 p., Hardcover

ISBN: 978-94-007-5160-6
