<b>MTSE : Editorial for Volume I</b>	<b>vii</b>
<b>Foreword</b>	<b>ix</b>
<b>Preface</b>	<b>xi</b>
<b>1. Polynomial Interpolation Formulas</b>	<b>1</b>
1.1 Existence based on the Vandermonde matrix . . . . .	1
1.2 The Lagrange interpolation formula . . . . .	5
1.3 Divided differences and the Newton interpolation formula . . . . .	8
1.4 Hermite interpolation . . . . .	14
1.5 Exercises . . . . .	22
<b>2. Error Analysis For Polynomial Interpolation</b>	<b>25</b>
2.1 General error estimate . . . . .	25
2.2 The Chebyshev interpolation points . . . . .	28
2.3 Exercises . . . . .	34
<b>3. Polynomial Uniform Convergence</b>	<b>37</b>
3.1 General definition and examples . . . . .	37
3.2 The Bernstein polynomials . . . . .	51
3.3 Bernstein polynomial approximation . . . . .	53
3.4 Shape-preservation . . . . .	61
3.5 Convergence rate . . . . .	67

---

3.6	Exercises . . . . .	68
<b>4.</b>	<b>Best Approximation</b>	<b>71</b>
4.1	Existence in normed linear spaces . . . . .	71
4.2	Uniqueness in inner product spaces . . . . .	77
4.3	Exercises . . . . .	81
<b>5.</b>	<b>Approximation Operators</b>	<b>85</b>
5.1	Linearity and exactness . . . . .	85
5.2	Boundedness and Lebesgue constants . . . . .	87
5.3	The approximation error . . . . .	93
5.4	Exercises . . . . .	97
<b>6.</b>	<b>Best Uniform Polynomial Approximation</b>	<b>99</b>
6.1	A necessary condition . . . . .	99
6.2	The equi-oscillation property . . . . .	102
6.3	Uniqueness . . . . .	108
6.4	The approximation operator . . . . .	110
6.5	An application in polynomial interpolation . . . . .	113
6.6	Explicit computation for specific cases . . . . .	118
6.7	Exercises . . . . .	123
<b>7.</b>	<b>Orthogonality</b>	<b>127</b>
7.1	The fundamental characterising condition . . . . .	127
7.2	The Gram matrix . . . . .	132
7.3	Orthogonal bases . . . . .	136
7.4	Orthogonal polynomials . . . . .	144
7.5	The Legendre polynomials . . . . .	149
7.6	Chebyshev polynomials and orthogonality . . . . .	155
7.7	Exercises . . . . .	162
<b>8.</b>	<b>Interpolatory Quadrature</b>	<b>167</b>
8.1	General formulation, exactness and convergence . . . . .	167
8.2	Gauss quadrature . . . . .	172

8.3	The Clenshaw-Curtis quadrature rule . . . . .	179
8.4	Newton-Cotes quadrature . . . . .	190
8.5	Error analysis for Newton-Cotes quadrature . . . . .	200
8.6	Composite Newton-Cotes quadrature . . . . .	214
8.7	Exercises . . . . .	227
<b>9.</b>	<b>Approximation of Periodic Functions</b>	<b>233</b>
9.1	Trigonometric polynomials . . . . .	233
9.2	A Weierstrass result for periodic functions . . . . .	238
9.3	The Fourier series operator . . . . .	243
9.4	Fourier series . . . . .	257
9.5	The Lebesgue constant in the maximum norm . . . . .	262
9.6	Sufficient condition for uniform convergence . . . . .	273
9.7	Exercises . . . . .	283
<b>10.</b>	<b>Spline Approximation</b>	<b>289</b>
10.1	Spline spaces . . . . .	289
10.2	$B$ -splines . . . . .	295
10.3	Spline interpolation . . . . .	312
10.4	Local quasi-interpolation . . . . .	322
10.5	Local spline interpolation . . . . .	336
10.6	Uniform convergence and error analysis . . . . .	354
10.7	Spline quadrature and the Gregory rule . . . . .	367
10.8	Exercises . . . . .	386
	<b>Index</b>	<b>401</b>
