Preface	vii
List of Figures	xv
1 Introductory Survey	1
1.1 Configuration Space and Lagrangian Dynamics	2
1.2 Symplectic Manifolds	3
1.3 Phase Space and Hamiltonian Dynamics	4
1.4 The Liouville and Arnold Theorems	5
1.5 Quasi-Integrable Hamiltonian Systems and KAM Theorem . .	7
1.6 Geography of the Phase Space	11
1.7 Numerical Tools	12
1.8 The Perturbed Kepler Problem	14
1.9 The Multi-Body Gravitational Problem	15
2 Analytical Mechanics and Integrable Systems	17
2.1 Differential Geometry	17
2.1.1 Differentiable Manifolds	18
2.1.2 Tensors and Forms	24
2.1.3 Riemannian, Symplectic, and Poisson Manifolds	30

2.2	Lie Groups and Lie Algebras	36
2.2.1	Definition and Properties	36
2.2.2	Adjoint and Coadjoint Representation	40
2.2.3	Action of a Lie Group on a Manifold	42
2.2.4	Classification of Lie Groups and Lie Algebras	45
2.3	Lagrangian and Hamiltonian Mechanics	48
2.3.1	Lagrange Equations	49
2.3.2	Hamilton Principle	51
2.3.3	Noether Theorem	52
2.3.4	From Lagrange to Hamilton	54
2.3.5	Canonical Transformations	56
2.3.6	Hamilton–Jacobi Equation	57
2.3.7	Symmetries and Reduction	58
2.3.8	Liouville Theorem	63
2.3.9	Arnold Theorem	68
2.3.10	Action-Angle Variables: Examples	73
2.A	Appendix: The Problem of two Fixed Centers	78
3	Perturbation Theory	83
3.1	Formal Expansions	84
3.1.1	Lie Series and Formal Canonical Transformations	84
3.1.2	Homological Equation and Its Formal Solution	87
3.2	Perpetual Stability and KAM Theorem	91
3.2.1	Cauchy Inequality	93
3.2.2	Convergence of Lie Series	95
3.2.3	Homological Equation and Its Solution	97
3.2.4	KAM Theorem (According to Kolmogorov)	100
3.2.5	KAM Theorem (According to Arnold)	110
3.2.6	Isoenergetic KAM Theorem	112
3.3	Exponentially Long Stability and Nekhoroshev Theorem	113
3.4	Geography of the Phase Space	120
3.5	Elliptic Equilibrium Points	123
3.A	Appendix: Results from Diophantine Theory	125
3.B	Appendix: Homoclinic Tangle and Chaos	127
4	Numerical Tools I: ODE Integration	131
4.1	Cauchy Problem	132
4.2	Euler Method	133
4.3	Runge–Kutta Methods	135
4.4	Gragg–Bulirsch–Stoer Method	137
4.5	Adams–Bashforth–Moulton Methods	138
4.6	Geometric Methods	140
4.7	What Methods Are in the MATLAB Programs?	144

5	Numerical Tools II: Detecting Order, Chaos, and Resonances	147
5.1	Poincaré Section	148
5.2	Variational Equation Methods	149
5.2.1	The Largest Lyapunov Exponents	150
5.2.2	The Fast Lyapunov Indicator	150
5.2.3	Other Methods	151
5.3	Fourier Transform Methods	152
5.3.1	Fast Fourier Transform (FFT)	153
5.3.2	Frequency Modified Fourier Transform (FMFT)	154
5.3.3	Wavelets and Time-Frequency Analysis	156
5.3.4	Frequency Modulation Indicator (FMI)	162
5.4	Some Examples	165
5.4.1	Symplectic Maps and the POINCARÉ Program	166
5.4.2	A Test Hamiltonian and the HAMILTON Program	168
5.4.3	The Lagrange Points L_4 and L_5 and the LAGRANGE Program	169
6	The Kepler Problem	175
6.1	Basics on the Kepler Problem	175
6.1.1	Conformal Group and Geodesic Flow on the Sphere	179
6.1.2	The Moser–Souriau Regularization	183
6.1.3	The Kustaanheimo–Stiefel Regularization	185
6.1.4	Action-Angle Variables	188
6.2	The Perturbed Kepler Problem	193
6.3	Normal Form of the Perturbed Kepler Problem	195
6.4	Numerical Integration	200
6.4.1	Perturbative Method	201
6.4.2	Non-Perturbative Method	202
6.5	Reduction under Axial Symmetry	202
7	The KEPLER Program	211
7.1	First Window: Single Orbit Analysis	211
7.1.1	Perturbation Hamiltonian	211
7.1.2	Initial Conditions	216
7.1.3	ODE Solver	216
7.1.4	Revolution Number	216
7.1.5	Regularization Method	217
7.1.6	Standard Method	218
7.1.7	Action-Angle Variables and Time-Frequency Analysis on KAM Tori	219
7.2	Second Window: “Global Analysis: Poincaré Section”	221
7.3	Third Window: “Global Analysis: Rotated Delaunay”	222
7.4	Fourth Window: “Global Analysis: Rotated Pauli”	224
7.5	Menu	224

7.5.1	File	224
7.5.2	Window	225
7.5.3	Figure	226
7.5.4	Normal Form	227
7.5.5	Help	227
8	Some Perturbed Keplerian Systems	229
8.1	The Stark-Quadratic-Zeeman (SQZ) Problem	229
8.1.1	First Order Normal Form	230
8.1.2	Second Order Nonintegrable Normal Form	232
8.1.3	Second Order Integrable Normal Form	234
8.1.4	The Quadratic Zeeman (QZ) Problem	238
8.1.5	The Parallel (SQZp) Problem	245
8.1.6	The Crossed (SQZc) Problem	246
8.1.7	The Generic (SQZ) Problem	255
8.2	The Non-Planar Circular Restricted Three-Body Problem . . .	255
8.3	Satellite about an Oblate Primary	262
9	The Multi-Body Gravitational Problem	265
9.1	Global Planar Three-Body Problem	266
9.1.1	The 2-Dimensional Secular Problem	268
9.1.2	Reduction under the $SO(2)$ -action	271
9.1.3	The Reduced Motion	275
9.2	The 3-Dimensional Planetary Problem	284
9.2.1	$SO(3)$ and Poincaré Variables	285
9.2.2	The Secular Planetary Problem	290
9.2.3	Linear Approximation: Lagrange-Laplace Theory	295
9.3	The LAPLACE Program	297
9.3.1	First Panel: Initial Conditions	298
9.3.2	Second Panel: Integration	298
9.3.3	Third Panel: Plot and Frequency Analysis	299
9.3.4	Fourth Panel: Frequency Modulation Indicator	300
9.3.5	Menu	300
9.4	Some Examples	301
10	Final Remarks and Perspectives	305
A	Appendix: What is in the CD?	309
B	Appendix: If one has no access to MATLAB	317
	Bibliography	319
	Index	327

Geography of Order and Chaos in Mechanics
Investigations of Quasi-Integrable Systems with
Analytical, Numerical, and Graphical Tools

Cordani, B.

2013, XVIII, 334 p., Hardcover

ISBN: 978-0-8176-8369-6
