

Contents

1	Concepts, Methods, and Paradigms	1
1.1	Introduction	1
1.2	Static Analysis: Geometric and Material Nonlinearities	4
1.3	Path-Following Methods	11
1.3.1	Step-by-Step Analysis: Sequential Path-Following	12
1.3.2	Pseudo-Arclength Path-Following Techniques	16
1.4	Dynamic Analysis: Periodic Motions	21
1.4.1	State-Space Formulation	22
1.5	Path-Following Based on the Poincaré Map	29
1.6	Examples of Path-Following of Equilibrium States	30
1.6.1	The von Mises Truss Structure	31
1.6.2	Equilibrium Paths of Microelectromechanical Systems	33
1.7	Examples of Path-Following of Limit Cycles and Periodic Solutions	39
1.7.1	Nonlinearly Viscoelastic Structures Subject to Harmonic Excitations	39
1.7.2	Shape-Memory Oscillators Under Harmonic Excitations	44
1.7.3	Flutter Control of an Airfoil	53
	Problems	63
2	Stability and Bifurcation of Structures	67
2.1	Stability of Motion	67
2.2	Stability of Equilibrium States	70
2.2.1	Static and Dynamic Bifurcations of Equilibrium States	74
2.2.2	Local Bifurcations of Equilibrium States	76
2.3	Stability of Limit Cycles and Periodic Solutions	86
2.4	Stability of Conservative and Nonconservative Systems and Structures	93

2.5	Static Bifurcations of Conservative Structures	101
2.5.1	Example of Supercritical Pitchfork Bifurcation	101
2.5.2	Example of Subcritical Pitchfork Bifurcation	109
2.5.3	Example of Transcritical Bifurcation	112
2.5.4	Example of Fold Bifurcation and the Snap-Through Phenomenon	115
2.6	The Buckling Problem	118
2.7	Dynamic Bifurcations: Flutter of Lifting Airfoils	121
2.8	Flutter of Wings: Reduced-Order Models	121
2.9	Dynamic Instabilities Due to Parametric Resonances	130
2.10	Parametric Resonances of Conservative Systems with Linear Damping	134
2.10.1	Multi-pendulum Systems and the Autoparametric Transfer of Energy	138
2.10.2	Parametric Resonance of Spherical and Cylindrical Shells Under Pulsating Pressures	144
	Problems	151
3	The Elastic Cable: From Formulation to Computation	155
3.1	Introduction	155
3.2	The Simplest One-Dimensional String/Cable Model	158
3.2.1	The Prestressed Equilibrium	160
3.2.2	The Incremental Problem: Total Versus Updated Lagrangian Formulation	173
3.2.3	Kinematics of the Incremental Problem	173
3.2.4	Equations of Motion	175
3.2.5	Weak Form of the Equations of Motion	178
3.2.6	Linearization about the Prestressed Equilibrium	178
3.3	Static Analysis: First-Order Sequential Continuation in Force Control	180
3.3.1	The Galerkin Method for the Incremental Problem	183
3.4	The Tethered Satellite System: A Space Application for Super-Long Strings	195
	Problems	206
4	Nonlinear Mechanics of Three-Dimensional Solids	211
4.1	Elements of the Theory of Deformation	212
4.2	Elements of the Stress Theory	232
4.3	The Cauchy Equations of Motion	237
4.4	The Equations of Motion in Material Description	239
4.5	Integral Formulations Toward Computations: The Weak Form	244
4.6	The Principles of Virtual Work and Virtual Power	246
4.7	The Constitutive Equations in Solid Mechanics	251
4.7.1	Elastic Materials	257
	Problems	277

5	The Nonlinear Theory of Beams	285
5.1	The Theory of Beams Undergoing Planar Motion	286
5.1.1	Weak Form of the Equations of Planar Motion	309
5.1.2	<i>Ad hoc</i> Mechanical Models of Unshearable Beams	310
5.1.3	Analytical Solutions, Comparisons with Existing Theories and Experimental Results	318
5.2	The Theory of Beams in Space	328
5.2.1	Equations of Motion	335
5.3	Weak Form of the Equations of Motion	346
5.4	The Theory of Rotating Beams in Space	349
	Problems	365
6	Elastic Instabilities of Slender Structures	367
6.1	The Buckling Problem of Compact Beams	367
6.1.1	Buckling of Elastic Beams	371
6.1.2	Buckling Loads and Mode Shapes of Beams and Framed Structures	374
6.1.3	Buckling and Postbuckling of Tapered Elastic Beams	379
6.2	Flexural–Torsional Buckling of Open Thin-Walled Beams	389
6.3	The Equations for Flexural–Torsional Buckling	393
6.3.1	Types of Flexural–Torsional Buckling for Open-Section Thin-Walled Beams	397
6.4	Parametric Resonance of Beams	405
6.5	Parametric Resonances of Conservative Systems with Linear Damping	415
6.6	Nonlinear Model for Flutter and Post-flutter of Wings	419
	Problems	425
7	The Nonlinear Theory of Curved Beams and Flexurally Stiff Cables	433
7.1	The Planar Theory of Curved Beams	434
7.2	Shallow Versus Nonshallow Curved Beams	454
7.3	The Theory of Curved Beams in Space	455
7.4	The Problem of Prestressed Beams	463
7.5	Stability of Arches	467
7.6	Deeply Buckled Beams	469
7.7	Parametric Resonance of Buckled Beams Subject to a Pulsating End Thrust	471
7.8	Parametric Resonance of Rings Subject to Pulsating Pressures	473
7.9	The Theory of Flexurally Stiff Cables	482
	Problems	494
8	The Nonlinear Theory of Plates	497
8.1	Introduction	497
8.2	Elastic Plates	499

8.3	The Theory of Deformation of Thin Plates	501
8.4	Equations of Motion	513
8.5	Component Form of the Equations of Motion	520
8.6	Constitutive Equations	522
8.7	The Weak Form of the Equations of Motion and the Principle of Virtual Power.....	526
8.8	Linearly Isotropic Single-Layer Plates	527
8.8.1	<i>Ad hoc</i> Plate Theories: The Föppl–von Kármán Theory	535
8.8.2	Nonlinear Equilibrium Response of Elastic Isotropic Plates: Theory Versus Experiment	538
8.9	Anisotropic and Orthotropic Single-Layer Plates.....	543
8.10	Multilayer Plates	553
8.10.1	Nonlinear Equilibrium Response of Multilayer Laminated Plates: Theory Versus Experiment	558
8.11	Linear Vibrations of Single- and Multilayer Prestressed Plates....	561
8.12	Buckling of Single- and Multilayer Plates	564
8.13	The Rayleigh–Ritz Method for Vibration and Buckling	570
8.14	Generalized Higher-Order Theory with Normal and Transverse Shear Strains	579
8.15	Buckling of Thick Multilayer Plates	583
	Problems	591
9	The Nonlinear Theory of Cable-Supported Structures	593
9.1	Cable-Supported Bridges	594
9.2	From the Deflection Theory to Nonlinear Theories of Suspension Bridges	595
9.2.1	The Theory of Suspension Bridges Deforming in Three-Dimensional Space	597
9.3	The Theory of Suspension Bridges Undergoing Planar Motion ...	612
9.3.1	Prestressed Equilibrium Under Dead Loads.....	613
9.3.2	Dynamic Problem Due to Live Loads	615
9.3.3	The Revisited Deflection Theory	618
9.4	Planar Equilibrium Response of Suspension Bridges	622
9.4.1	Planar Dynamic Response of Suspension Bridges	625
9.5	Equilibrium Paths in Three-Dimensional Space	629
9.6	Aeroelastic Analysis of Suspension Bridges	633
9.6.1	Torsional Divergence	640
9.6.2	Flutter Analysis	648
9.6.3	Linear Equations for Flutter	649
9.7	Elements of Cable-Stayed Structures.....	658
9.8	Cable-Stayed Bridges	665
9.9	Guyed Structures	671
	Problems	676

10	The Nonlinear Theory of Arch-Supported Structures	681
10.1	Arch-Supported Bridges	682
10.2	The Nonlinear Theory of Arch Bridges Deforming in Three-Dimensional Space.....	682
10.3	The Equations of Motion	688
10.4	The Theory of Arch Bridges Undergoing Planar Motion	696
10.4.1	Nonlinear Planar Response of Arch Bridges	701
10.5	A Case Study: <i>Ponte della Musica</i>	705
10.5.1	Elastic Stability Analysis.....	707
10.5.2	Flutter Analysis of <i>Ponte della Musica</i>	709
11	Discretization Methods.....	717
11.1	Discretization of Distributed-Parameter Systems.....	717
11.2	The Method of Weighted Residuals	718
11.3	The Method of Weighted Residuals and the Principle of Virtual Work	723
11.4	The Method of Weighted Residuals for Dynamic Problems	730
11.5	The Galerkin Method	733
11.6	The Ritz Method	735
11.6.1	The Ritz Method for Dynamic Problems.....	738
11.7	A Nonlinear Finite Element Formulation for Continuation Analysis.....	741
Solutions.....		751
References.....		779
Index.....		799
