

Contents

1	Fair-Division Problems	1
1.1	Brouwer's Fixed-Point Theorem and Sperner's Lemma	1
1.2	Envy-Free Fair Division	7
1.3	The Borsuk–Ulam Theorem and Tucker's Lemma	11
1.4	A Generalization of Tucker's Lemma	16
1.5	Consensus $\frac{1}{2}$ -Division	21
1.6	The Borsuk–Ulam Property for General Groups	23
1.7	Consensus $\frac{1}{k}$ -Division	28
	Exercises	31
2	Graph-Coloring Problems	37
2.1	The Kneser Conjecture	38
2.2	Lovász's Complexes	41
2.3	A Conjecture by Lovász	51
2.4	Classes with Good Topological Lower Bounds for the Chromatic Number	63
	Exercises	67
3	Evasiveness of Graph Properties	69
3.1	Graph Properties and Their Complexity	69
3.2	Evasiveness of Monotone Graph Properties	82
3.3	Karp's Conjecture in the Prime-Power Case	89
3.4	The Rivest–Vuillemin Theorem on Set Systems	92
	Exercises	93
4	Embedding and Mapping Problems	97
4.1	The Radon Theorems	97
4.2	Deleted Joins and the \mathbb{Z}_2 -Index	98
4.3	Bier Spheres	102
4.4	The van Kampen–Flores Theorem	104
4.5	The Tverberg Problem	106
4.6	An Obstruction to Graph Planarity	110

4.7	Conway's Thrackles	122
	Exercises	142
5	Appendix A: Basic Concepts from Graph Theory	145
A.1	Graphs.....	145
A.2	Graph Invariants	152
A.3	Graph Drawings and Planarity	154
A.4	Rotation Systems and Surface Embeddings	157
	Exercises	161
6	Appendix B: Crash Course in Topology	163
B.1	Some Set-Theoretic Topology	163
B.2	Surfaces	172
B.3	Simplicial Complexes	174
B.4	Shellability of Simplicial Complexes.....	178
B.5	Some Operations on Simplicial Complexes	179
B.6	The Language of Category Theory	181
B.7	Some Homological Algebra	183
B.8	Axioms for Homology	186
B.9	Simplicial Homology.....	188
	Exercises	194
7	Appendix C: Partially Ordered Sets, Order Complexes, and Their Topology	199
C.1	Partially Ordered Sets	199
C.2	Order Complexes	201
C.3	Shellability of Partial Orders.....	203
	Exercises	206
8	Appendix D: Groups and Group Actions	209
D.1	Groups	209
D.2	Group Actions	210
D.3	Topological G -Spaces	214
D.4	Simplicial Group Actions	215
	Exercises	217
9	Appendix E: Some Results and Applications from Smith Theory	219
E.1	The Transfer Homomorphism	219
E.2	Transformations of Prime Order	221
E.3	A Dimension Estimate and the Euler Characteristic	223
E.4	Homology Spheres and Disks.....	226
E.5	Cyclic Actions and a Result by Oliver	227
	Exercises	228
	References.....	229
	Index	233
