

Contents

1	Introduction	1
1.1	A Brief Overview	1
1.1.1	Artificial Intelligence	2
1.1.2	Computer Science/Engineering	2
1.1.3	Optimization	3
1.1.4	Statistics	4
1.2	A Brief History of Robustness	5
1.2.1	Robust Optimization vs Stochastic Programming	6
2	Least Squares Problems	9
2.1	Original Problem	9
2.2	Weighted Linear Least Squares	12
2.3	Computational Aspects of Linear Least Squares	12
2.3.1	Cholesky Factorization	13
2.3.2	QR Factorization	13
2.3.3	Singular Value Decomposition	13
2.4	Least Absolute Shrinkage and Selection Operator	14
2.5	Robust Least Squares	14
2.5.1	Coupled Uncertainty	14
2.6	Variations of the Original Problem	17
2.6.1	Uncoupled Uncertainty	19
3	Principal Component Analysis	21
3.1	Problem Formulations	21
3.1.1	Maximum Variance Approach	22
3.1.2	Minimum Error Approach	23
3.2	Robust Principal Component Analysis	24
4	Linear Discriminant Analysis	27
4.1	Original Problem	27
4.1.1	Generalized Discriminant Analysis	30
4.2	Robust Discriminant Analysis	31

5	Support Vector Machines	35
5.1	Original Problem	35
5.1.1	Alternative Objective Function.....	41
5.2	Robust Support Vector Machines	42
5.3	Feasibility-Approach as an Optimization Problem	45
5.3.1	Robust Feasibility-Approach and Robust SVM Formulations	45
6	Conclusion	49
A	Optimality Conditions	51
B	Dual Norms	55
	References	57
