

Contents

1	Introduction	1
1.1	An Overview of WIP Robots	2
1.2	Difficulties of Controlling WIP Systems	6
1.3	Outline of Book	10
2	Mathematical Preliminaries	13
2.1	Introduction	13
2.2	Matrix Algebra	13
2.3	Norms for Functions	17
2.4	Definitions	20
2.5	Lemmas and Theorems	22
2.6	Input-to-State Stability	24
2.7	Lyapunov's Direct Method	25
2.8	Barbalat-Like Lemmas	26
2.9	Controllability and Observability of Nonlinear Systems	28
2.9.1	Controllability	28
2.9.2	Observability	29
2.9.3	Brockett's Theorem on Feedback Stabilization	31
2.10	Lyapunov Theorems	31
2.11	Notes and References	36
3	Modeling of WIP Systems	37
3.1	Introduction	37
3.2	Kinematics of the WIP Systems	38
3.3	Dynamics of WIP Systems	41
3.3.1	Lagrange-Euler Equations	42
3.3.2	Kinetic Energy	45
3.3.3	Potential Energy	46
3.3.4	Lagrangian Equations	46
3.3.5	Properties of Mechanical Dynamics	48
3.3.6	Dynamics of Wheeled Inverted Pendulum	49

3.4	Newton–Euler Approach	51
3.5	Conclusion	54
4	Linear Control	55
4.1	Introduction	55
4.2	Linearization of the WIP Dynamics	56
4.3	PD Control Design	58
4.4	LQR based Optimal Control Design	59
4.5	H_∞ Control	60
	4.5.1 Riccati-Based H_∞ Control	61
	4.5.2 LMI-Based H_∞ Control	62
4.6	Backstepping	63
4.7	Simulation Studies	65
	4.7.1 PD Control	65
	4.7.2 LQR Control	66
	4.7.3 H_∞ -Like Riccati Control	68
	4.7.4 LMI-Based H_∞ Control	70
	4.7.5 Backstepping Control	71
4.8	Conclusion	71
5	Nonlinear Control	77
5.1	Introduction	77
5.2	Preliminaries	78
5.3	System Dynamics	78
5.4	Nonlinear Feedback Linearization	80
5.5	Model Based Control Design	80
5.6	Model-Based Disturbance Rejection Control	86
5.7	Simulation Studies	92
5.8	Conclusion	97
6	Adaptive Control	99
6.1	Introduction	99
6.2	Motion Control	99
	6.2.1 Adaptive Robust Control Design	100
	6.2.2 Zero-Dynamics Stability Analysis	107
	6.2.3 Simulation Studies	108
6.3	Hybrid Force and Motion Control	109
	6.3.1 Preliminaries and Dynamics Transformation	113
	6.3.2 Motion Control of z_2 and z_3 -Subsystems	116
	6.3.3 Stability Analysis of the z_1 -Subsystem	120
	6.3.4 Force Control	122
	6.3.5 Simulation Studies	122
	6.3.6 Conclusions	124
7	Intelligent Control	127
7.1	Introduction	127
7.2	SVM Control	128

7.2.1	Preliminaries	129
7.2.2	Reduced Dynamics and Physical Properties	131
7.2.3	LS-SVM Based Model Learning	132
7.2.4	LS-SVM Based Control Design	134
7.2.5	Simulation Studies	141
7.3	Fuzzy Control	144
7.3.1	Preliminaries	145
7.3.2	Functional Universal Approximation Using FLSs	145
7.3.3	Adaptive Fuzzy Control	147
7.3.4	Simulation Studies	155
7.4	Neural Network Output Feedback Control	157
7.4.1	Preliminaries	159
7.4.2	Neural Networks and Parametrization	160
7.5	Problem Formulation	161
7.5.1	Output Feedback Control	164
7.5.2	Stability Analysis	165
7.5.3	Simulation Studies	170
7.5.4	Conclusions	171
8	Optimized Model Reference Adaptive Control	175
8.1	Introduction	175
8.2	Preliminaries	176
8.2.1	Finite Time Linear Quadratic Regulator	176
8.2.2	HONN Approximation	177
8.3	Dynamics of Wheeled Inverted Pendulums	178
8.4	Control of ζ_1 and ζ_3 -Subsystems	179
8.4.1	Subsystem Dynamics	179
8.4.2	Optimal Reference Model	180
8.4.3	Model Matching Error	182
8.4.4	Adaptive Control Design	183
8.4.5	Controller Structure	183
8.4.6	Control Performance Analysis	184
8.5	Reference Trajectory Generator for ζ_2 Subsystem	186
8.6	Simulation Studies	186
8.7	Conclusion	191
9	Neural Network Based Model Reference Control	193
9.1	Introduction	193
9.2	Preliminaries	193
9.2.1	Radial Basis Function Neural Network	193
9.2.2	Block Matrix Operation	194
9.3	Dynamics of Wheeled Inverted Pendulums	195
9.4	Control of Angular Motion Subsystems	196
9.4.1	Optimized Reference Model	196
9.4.2	Adaptive NN Model Reference Control	198
9.5	Adaptive Generator of Implicit Control Trajectory	204

9.6 Simulation Studies 207

9.7 Conclusion 208

Advanced Control of Wheeled Inverted Pendulum
Systems

Li, Z.; Yang, C.; Fan, L.

2013, XIV, 218 p., Hardcover

ISBN: 978-1-4471-2962-2
