

Contents

Part I Product Quality

1	Product Assurance	3
1.1	Product Assurance Defined	3
1.2	Industrial Leadership and Product Assurance	6
1.3	Real Quality Versus Appearances: A Case Study	10
1.4	Basic Quality Characteristics: An Example	14
1.5	Research Needed for Checking What Is Not Easy to See	18
	References	21
2	Quality Control	23
2.1	Quality Control is a Flexible, Polyvalent Concept	23
2.2	The Expanding Horizon of Industrial Statistical Methods	26
2.3	Instituting a Quality Control Program	29
2.4	Unwarranted Resistance to Better Methods for Quality Control	33
2.5	Open Communications Channels and Quality Improvement . . .	36
	References	40
3	Designing for Quality	41
3.1	Mission of a Design Engineer	41
3.2	Improving Quality Assurance	44
3.3	Technical Audits	47
3.4	Design Reviews	50
3.5	The Clash Between Evolution and Standardization	53
	References	56

Part II Service Quality

4	Service Assurance: A Case Study	59
4.1	Alternative Energy Technology and Service Assurance	59
4.2	Reinventing the I.T.'s Strong Arm Tactics	62
4.3	Unfulfilled Promises of Heat Pumps	67
4.4	Requirements for a Solution to Improve House Heating	71
4.5	The Vendor Continued to Violate Service Assurance Prerequisites	74
4.6	When Irrelevance Reaches the Top, Service Assurance is Doomed	77
	Reference	80
5	Man-Made Catastrophes are the Result of Wanting Service Assurance.	81
5.1	What the Nuclear Plants Damage at Fukushima Meant to Japan and to the World	81
5.2	At the Daiichi Plants Service Assurance was on Leave	84
5.3	A Shot-by-Shot Account of the Perfect Storm	88
5.4	Natural Catastrophes and Those Man-Made	91
5.5	Service Assurance for Power Production	95
5.6	Technology and Living Standards Require Greater and Greater Power Supply	99
	References	101

Part III Product Reliability

6	Reliability Assurance	105
6.1	Quality and Reliability	105
6.2	Designing for Reliability Assurance	108
6.3	Combining Mathematical and Engineering Knowhow	111
6.4	Inspecting Lots and Systems	114
6.5	Can Reliability be Improved Through Redundancy?	117
6.6	The Case of Cost/Effectiveness	120
7	Reliability and Life Cycle Maintainability	125
7.1	Tests for Reliability Assurance	125
7.2	Poisson and Weibull Distributions	128
7.3	Life Cycle Maintainability	131
7.4	Safety Factors and Safety Margins	134
7.5	Field Feedback for Reliability Assurance	139

Part IV Statistical Inference

8	A Brief Introduction to Stochastic Thinking	145
8.1	Probabilities	145
8.2	Stochastic Method	148
8.3	Asymmetries, Fractals, and Complex Numbers	152
8.4	Which Might be the Normal Case?	155
8.5	Test of Hypothesis	160
	References	164
9	Sampling Methods	165
9.1	Sampling Defined	165
9.2	Principles Underpinning Sampling Plans	167
9.3	Practical Examples with Sampling Plans	171
9.4	Discovery Sampling: A Case Study	175
9.5	Sampling Errors	179
9.6	Product Innovation Requires More Sophisticated Sampling Plans	181
	References	185
10	Operating Characteristics Curves	187
10.1	Operating Characteristics and Power Curves	187
10.2	Improving the Shape of an OC Curve	190
10.3	Using OC Curves: A Methodology	193
10.4	Level of Confidence	197
10.5	Tests of a System	201
10.6	Controlling the Hazard of Guesswork Through Experiments	205
	References	207
11	Experimental Design and Latin Squares	209
11.1	Experimental Design In-the-Large	209
11.2	Simultaneous Variation and Randomization	212
11.3	Experimental Design Methods in the Small	215
11.4	The Use of Factorial Design	218
11.5	Full Factorial Design and Predetermined Confounding	222
11.6	Latin Squares	225
11.7	Latin Squares and Analysis of Variance	229

Part V Statistical Quality Control

12	Fundamentals of Statistical Quality Inspection	235
12.1	Measured Quality of Manufactured Products	235
12.2	Organization for Quality Control	238

12.3	Responsibilities in Quality Control	241
12.4	Six Sigma: A Quality Culture	244
12.5	Using Six Sigma	247
12.6	Evaluating Results from Observation and Experimentation . . .	250
12.7	Cause, Effect, and Causal Inference	252
13	Quality Control Charts by Variables	257
13.1	Variables and Attributes Defined	257
13.2	Sampling Inspection by Variables and Modes of Inspection. . .	261
13.3	The Calculation of Control Limits	265
13.4	Using SQC Charts by Variables	269
13.5	The Statistical Quality Control Chart Is a Model	274
	Reference	276
14	Quality Control Charts by Attributes	277
14.1	Fraction Defective	277
14.2	Sampling Plan for Control by Attributes	280
14.3	Plotting Percent Defective in SQC	283
14.4	Upper and Lower Control Limits	286
14.5	Quality Control Charts for the Number of Defects Per Unit. . .	290
	References	293
15	The Culture of Statistical Quality Control	295
15.1	Fulfilling the Prerequisites: Culture and Expertise	295
15.2	Restructuring System and Procedures	298
15.3	Implementation of Sampling Plans in Smaller Firms.	301
15.4	Lot Templates for Quality Inspection	304
15.5	Acceptance Limits for Lot Templates	310
15.6	Overcoming Communications Barriers	313
	Reference	315
Index	317

Quality Control Applications

Chorafas, D.N.

2013, XII, 332 p., Hardcover

ISBN: 978-1-4471-2965-3
