

# Contents

<b>1</b>	<b>Electromagnetic Waves in Metallic Wire Structures</b>	<b>1</b>
1.1	Introduction	1
1.2	Circuit Equation	3
	References	5
<b>2</b>	<b>Resonance Properties of Metallic Ring Systems: A Single Ring</b>	<b>7</b>
2.1	Introduction	7
2.2	Simple Physical Picture	8
2.3	Circuit Parameters for a Single Ring	9
2.4	Implementation of the Boundary Conditions	13
2.4.1	The Gap Resistance Approach	13
2.4.2	The Local Field Approach	14
2.5	Analytical Results for a Single Ring SRR	16
2.6	Numerical Results for a Single Ring SRR	19
2.7	Summary	23
	References	26
<b>3</b>	<b>Resonance Properties of Metallic Ring Systems: More Complex Structures</b>	<b>29</b>
3.1	Introduction	29
3.2	Double-Ring SRR	30
3.3	Coplanar Double-Ring SRR	32
3.4	BC-SRR	38
3.5	Summary	43
	References	43
<b>4</b>	<b>Helical Structures</b>	<b>45</b>
4.1	Introduction	45
4.2	Circuit Parameters for an Arbitrary-Shaped Metallic Thin Wire	46

4.3	Formalism for a Helix . . . . .	48
4.4	Circuit Parameters . . . . .	50
4.5	Response . . . . .	52
4.6	Helical Antenna . . . . .	55
4.6.1	End-Fire Mode . . . . .	57
4.6.2	Broadside Mode . . . . .	57
4.7	Helical Circular Polarizer . . . . .	57
4.8	Faraday Rotation . . . . .	58
4.8.1	Numerical Estimates . . . . .	59
	References . . . . .	61
<b>5</b>	<b>General Multiply Connected Metallic Wire Networks:</b>	
	<b>T and H . . . . .</b>	<b>63</b>
5.1	Introduction . . . . .	63
5.2	Formulation . . . . .	64
5.3	The “T” Structure . . . . .	68
5.3.1	Classifying the Eigenmodes by Network Symmetry . . . .	72
5.3.2	Physical Picture . . . . .	75
5.4	The H Structure. . . . .	77
5.4.1	Physical Picture . . . . .	84
5.5	Comparison Between Results in Previous Sections and Results from FDTD Simulations . . . . .	86
5.5.1	Descriptions of the FDTD Simulations . . . . .	86
5.5.2	T-Shape Structures . . . . .	87
5.5.3	H-Shape Structures . . . . .	90
5.6	Summary . . . . .	90
	References . . . . .	91
<b>6</b>	<b>Jerusalem Cross. . . . .</b>	<b>93</b>
6.1	Introduction . . . . .	93
	Reference . . . . .	98
<b>7</b>	<b>Metallic Wire Structures Under a Moderate Electromagnetic Field . . . . .</b>	<b>99</b>
	References . . . . .	104
<b>8</b>	<b>Electromagnetic Waves in Wire Composites I: Plasmonics . . . . .</b>	<b>105</b>
8.1	Introduction . . . . .	105
8.2	Scattering . . . . .	107
8.3	Effect of the Variation of the Current Along the Wire . . . . .	108
8.4	Variation Perpendicular to the Wire: The “Pseudopotential” Idea . . . . .	109
8.5	Photonic Band Structure. . . . .	112
	References . . . . .	118

**9 Electromagnetic Waves in Wire Composites II: Anisotropic, Off-Diagonal Magnetoelectric Wire Composites.** . . . . . 121

9.1 Introduction . . . . . 121

9.2 Propagation of Plane Waves . . . . . 123

9.2.1 One Type of Split Rings . . . . . 125

9.2.2 Medium with Two Types of Rings . . . . . 127

9.2.3 3-Ring Medium . . . . . 130

9.3 Reflection and Refraction from Composites of Split Rings. . . . . 134

9.4 Propagation of Electromagnetic Waves in Helixes. . . . . 136

References . . . . . 137

**Index** . . . . . 139

Electromagnetic Behaviour of Metallic Wire Structures

Chui, S.T.; Zhou, L.

2013, X, 142 p., Hardcover

ISBN: 978-1-4471-4158-7
