## Part I

<b>1</b>	<b>From the Nuclear Fusion to the Radiated Energy on the Earth . . .</b>	<b>3</b>
1.1	Inside the Universe . . . . .	3
1.2	The Sun . . . . .	5
1.2.1	Inside the Sun . . . . .	5
1.3	From the Sun to the Earth. . . . .	9
1.3.1	Finding One’s Bearings on the Earth . . . . .	11
1.3.2	The Greenhouse Effect. . . . .	12
1.4	Tracking the Sun . . . . .	12
1.5	Measuring Sunlight . . . . .	15
1.6	Sunlight Emulation. . . . .	16
1.7	Collecting Sunlight. . . . .	17
1.8	Conclusions. . . . .	17
	Bibliography. . . . .	18
<b>2</b>	<b>From Radiated Energy to Electrical Energy: Physics of Photovoltaic Cells . . . . .</b>	<b>19</b>
2.1	Prologue: The Photoelectric Effect. . . . .	19
2.2	Metals, Semiconductors, Insulators. . . . .	21
2.3	Inside the Band Structure of a Semiconductor . . . . .	22
2.4	Absorption of Light . . . . .	23
2.5	Allowable States for Holes and Electrons . . . . .	25
2.6	Energy Distribution for Holes and Electrons . . . . .	25
2.7	Doping . . . . .	27
2.8	Carrier Transport . . . . .	29
2.8.1	Drift Current . . . . .	30
2.8.2	Diffusion Current. . . . .	32
2.8.3	Semiconductor Resistivity. . . . .	33

2.9	Semiconductor Fundamental Equations . . . . .	34
2.9.1	The Poisson's Equation . . . . .	34
2.9.2	Continuity Equation . . . . .	34
2.10	Minority Carrier Diffusion Equations . . . . .	36
2.11	P–N Junction . . . . .	37
2.12	P–N Junction Capacitance . . . . .	41
2.13	The PV Cell . . . . .	45
2.13.1	Minority Carriers Current Density . . . . .	46
2.13.2	Optical Generation Rate . . . . .	47
2.13.3	Recombination Rate . . . . .	47
2.13.4	Current Versus Voltage Law of Photovoltaic Cell . . . . .	47
2.14	Physical Model of a PV Cell . . . . .	48
2.15	Semiconductor Types . . . . .	49
2.15.1	Crystalline Silicon . . . . .	50
2.15.2	Multicrystalline . . . . .	50
2.15.3	Amorphous . . . . .	50
2.15.4	Thin Film . . . . .	51
2.15.5	Polymer Solar Cell . . . . .	51
2.16	Conclusions . . . . .	52
	Bibliography . . . . .	53
<b>3</b>	<b>Photovoltaic Source Models . . . . .</b>	<b>55</b>
3.1	Introduction . . . . .	55
3.2	Static Model . . . . .	56
3.2.1	Circuit Model of a PV Cell . . . . .	56
3.2.2	Diffusion Diode Non-Ideality . . . . .	61
3.2.3	Parasitic Resistance Effects . . . . .	61
3.2.4	Generalized Double Diode Model . . . . .	63
3.2.5	Simplified Single Diode Model . . . . .	63
3.3	Cell-Module/Field . . . . .	71
3.4	Dynamic Model . . . . .	73
3.4.1	Parallel Capacitance . . . . .	73
3.4.2	Series Inductance . . . . .	75
3.5	Modeling PV Fields under Nonuniform Illuminating Conditions . . . . .	75
3.6	Conclusions . . . . .	81
	Bibliography . . . . .	81
<b>4</b>	<b>Parameter Identification for Photovoltaic Source Models . . . . .</b>	<b>83</b>
4.1	Introduction . . . . .	83
4.2	Five-Parameter PV Model Formulation . . . . .	84
4.3	Four-Parameter PV Model Formulation . . . . .	85
4.4	Methods for the Parameter Extraction . . . . .	86
4.4.1	Analytical Solution . . . . .	86

4.4.2	Numerical Solution . . . . .	93
4.4.3	Heuristic Methods-Based Solution . . . . .	102
4.5	Parameters Dependence on Temperature and Solar Irradiance . . . . .	104
4.6	Identification of PV Model Parameters by Linear Regression Methods. . . . .	107
4.7	PV Characteristic Representation Through Mapping Techniques . . . . .	112
4.7.1	Look-Up-Table Approach . . . . .	113
4.7.2	Neural Approach . . . . .	113
4.8	Examples of Matlab/Simulink® Simulation of PV Electrical Characteristics . . . . .	115
4.8.1	PV Field Array Model Identified by the Discrete Approach . . . . .	117
4.8.2	PV Field Array Model Identified by the Regression Approach . . . . .	118
4.8.3	PV Source Model Under Non-Uniform Irradiance . . . . .	120
4.9	Conclusions. . . . .	127
	Bibliography. . . . .	127
<b>5</b>	<b>Photovoltaic Source Dynamic Modeling Issues . . . . .</b>	<b>131</b>
5.1	Introduction. . . . .	131
5.2	Dynamic PV Model Formulation . . . . .	132
5.3	Parameters Identification. . . . .	137
5.4	Matlab/Simulink® Simulation of PV Electrical Characteristics. . . . .	142
5.4.1	$V = f(I)$ Static Model Formulation . . . . .	142
5.4.2	$I = f(V)$ Static Model Formulation . . . . .	143
5.4.3	S-Domain Dynamic Model . . . . .	145
5.4.4	Nonlinear Junction Capacitance Implementation . . . . .	146
5.4.5	PV Model Including Nonlinear Junction Capacitance. . . . .	148
5.4.6	Circuit Implementation Using PLECS® . . . . .	151
5.5	Conclusions. . . . .	168
	Bibliography. . . . .	168

## Part II

<b>6</b>	<b>Photovoltaic Source Emulation. . . . .</b>	<b>173</b>
6.1	Introduction. . . . .	173
6.2	PV Emulators: Concepts and Realization . . . . .	175
6.2.1	Power Stage: A Survey of Proposed Solutions . . . . .	175
6.2.2	Control Stage: PV Behavior Implementation. . . . .	187
6.3	Dynamics and the Arbitrary Load Problem . . . . .	191

6.4	Non-Ideal Operating Conditions. . . . .	194
6.5	Rated Power . . . . .	196
6.6	Modularity . . . . .	196
6.7	Examples of Solutions Available on the Market . . . . .	197
6.8	Conclusions. . . . .	200
	Bibliography. . . . .	201
<b>7</b>	<b>DC/DC Power Converters . . . . .</b>	<b>203</b>
7.1	Introduction. . . . .	203
7.2	Linear Conversion . . . . .	204
7.2.1	Linear Conversion by Voltage Divider. . . . .	204
7.2.2	Linear Conversion by Series Regulator. . . . .	205
7.3	Switching Conversion. . . . .	206
7.4	Buck Converter . . . . .	207
7.4.1	Continuous Operating Mode . . . . .	207
7.4.2	Discontinuous Operating Mode . . . . .	210
7.4.3	Continuous Operating Mode Including Parasitic Parameters . . . . .	216
7.5	Boost Converter. . . . .	217
7.5.1	Continuous Operating Mode . . . . .	218
7.5.2	Discontinuous Operating Mode . . . . .	221
7.5.3	Continuous Operating Mode Including Parasitic Parameters . . . . .	224
7.6	Buck-Boost Converter . . . . .	225
7.6.1	Continuous Operating Mode . . . . .	226
7.6.2	Discontinuous Operating Mode . . . . .	227
7.6.3	Continuous Operating Mode Including Parasitic Parameters . . . . .	228
7.7	Comparison Among Buck, Boost, and Buck-Boost Topologies . . . . .	229
7.8	Non-Ideal Behavior of Devices and Their Influence on the DC/DC Converter Operation . . . . .	230
7.8.1	Inductor . . . . .	230
7.8.2	Capacitor . . . . .	231
7.8.3	Diode. . . . .	232
7.8.4	Power Switch . . . . .	234
7.9	State Space Representation . . . . .	237
7.10	State Space Averaging . . . . .	237
7.11	State Space Averaging of Buck Converter . . . . .	240
7.12	State Space Averaging of Boost Converter . . . . .	242
7.13	State Space Averaging of Buck-Boost Converter . . . . .	246
7.14	Synopsis . . . . .	250
7.15	Conclusions. . . . .	250
	Bibliography. . . . .	251

<b>8</b>	<b>Feedback Control of the DC/DC Converters for PV Source Emulation . . . . .</b>	<b>253</b>
8.1	Negative Feedback Classical Control . . . . .	253
8.1.1	Closed-Loop Gain . . . . .	253
8.1.2	Stability Analysis. . . . .	254
8.2	Feedback Structure of a DC/DC Converter . . . . .	259
8.2.1	Feedback Network Transfer Function. . . . .	259
8.2.2	Pulse Width Modulator Transfer Function . . . . .	259
8.2.3	Compensation Networks . . . . .	260
8.3	Complete State Feedback (Pole Placement Technique). . . . .	264
8.4	Enhanced Pole Placement for Buck Converter. . . . .	266
8.4.1	Simulink® Implementation . . . . .	270
8.5	DC/DC Converter-Based Emulation of a PV Source . . . . .	272
8.5.1	DC/DC Power Converter Design Constraints . . . . .	273
8.5.2	Selection of the Best Topology . . . . .	274
8.6	Example of a PV Source Emulator Design . . . . .	275
8.6.1	Power Stage Design . . . . .	276
8.6.2	Pole Placement Voltage Controller . . . . .	277
8.7	PLECS-Based Simulation of PV Source Emulator . . . . .	278
8.8	Experimental Implementation of the PV Source Emulator. . . . .	285
8.8.1	DC/DC Buck Converter . . . . .	285
8.8.2	Control Board . . . . .	286
8.8.3	DC/DC Boost Converter for the MPPT . . . . .	289
8.9	Experimental Results . . . . .	291
8.10	Conclusions. . . . .	295
	Bibliography . . . . .	296

Photovoltaic Sources

Modeling and Emulation

Di Piazza, M.C.; Vitale, G.

2013, XVII, 299 p., Hardcover

ISBN: 978-1-4471-4377-2
