

# Contents

<b>1</b>	<b>Introduction into Systems Analysis</b>	<b>1</b>
1.1	The Idea of the System and its Environment	1
1.2	Properties of Systems	3
1.3	Classification of Systems and their Characteristics	4
1.4	An Excerpt of the General Theory of Systems	7
1.5	The Structure of Systems	10
	References	13
<b>2</b>	<b>Large Energy Systems</b>	<b>15</b>
2.1	Characteristics of Large Energy Systems	16
2.2	Hierarchical Structure of Large Energy Systems	17
2.3	External Connections	18
2.4	Characteristics of Dynamic Connections and Back-connections in Large Energy Systems	21
2.5	Information about Investigations of Large Energy Systems	22
2.6	Indefinability of Optimal Solutions and their Economic Stability	24
2.7	Control in Large Energy Systems	25
	References	26
<b>3</b>	<b>Mathematical Modeling and Optimization of Energy Systems</b>	<b>29</b>
3.1	The Essence of Mathematical Modeling	30
3.2	Types of Mathematical Models and their Application in Investigations of Energy Systems	31
3.3	Application of the Input–Output Analysis	34
3.4	Dynamic Linear Models of Optimization	37
3.5	Decomposition of the Optimization Problem	38
3.6	Characteristics of the Development of Large Energy Systems	39
3.7	Forecasting in Energy Engineering	40

3.7.1	Kinds of Forecasts . . . . .	40
3.7.2	Methods of Forecasting . . . . .	43
3.8	Criteria of Optimization and Restrictions in the Development of Energy Systems . . . . .	48
3.8.1	Criterion of Economic Effectiveness . . . . .	48
3.8.2	Criterion of Social Effectiveness (Quality of Life) . . . . .	51
3.8.3	Restrictions in the Development of Energy Systems . . . . .	53
3.9	The Choice of a Solution in Conditions of Indefinable Optimal Solutions . . . . .	55
	References . . . . .	57
<b>4</b>	<b>Energy Management of Complex Buildings as a System . . . . .</b>	<b>59</b>
4.1	System Approach to Energy Analysis of Complex Buildings . . . . .	60
4.2	Examples of Complex Buildings . . . . .	62
4.2.1	Airports . . . . .	62
4.2.2	Hospitals . . . . .	63
4.2.3	Office Buildings . . . . .	64
4.2.4	Sports and Recreation Buildings . . . . .	64
4.2.5	Shopping Centers . . . . .	65
4.3	Modern Distributed Energy Systems in Complex Buildings . . . . .	66
4.3.1	Small-scale Cogeneration Systems for Application in Buildings . . . . .	67
4.4	Utilization of Renewable Energy Resources in Complex Buildings . . . . .	79
4.4.1	Solar Energy . . . . .	80
4.4.2	Wind Energy . . . . .	84
4.4.3	Ground-source Heat Pumps in Complex Buildings . . . . .	85
4.4.4	Bioenergy for Complex Buildings . . . . .	87
4.5	Supply of Energy Carriers to Complex Buildings . . . . .	88
4.5.1	District Heating Supply Systems . . . . .	88
4.5.2	Electricity Supply . . . . .	89
4.5.3	Water Supply . . . . .	90
	References . . . . .	91
<b>5</b>	<b>Supply of Heat, Cogeneration, and Trigeneration . . . . .</b>	<b>93</b>
5.1	The Municipal Energy Sector as a Part of the Energy System of the Country. . . . .	94
5.2	Ways to Meet the Demand for Energy Carriers in Complex Buildings . . . . .	96
5.3	Supply of Heat . . . . .	97
5.3.1	Introduction . . . . .	97
5.3.2	Consumers of Heat. Heat Carriers . . . . .	98
5.3.3	Heat Demand for Space Heating . . . . .	99
5.3.4	Heat Demand for Ventilation . . . . .	100

5.3.5	Heat Demand for the Production of Hot Tap Water . . . .	102
5.3.6	Total Demand for Heat . . . . .	103
5.3.7	Choice of Parameters of Heat Carriers. . . . .	104
5.3.8	Thermal Centers . . . . .	106
5.3.9	Control of the Supply of Heat . . . . .	107
5.3.10	Application of Heat Pumps in Heat Engineering. . . . .	114
5.4	Cogeneration of Heat and Electricity: Combined Heat and Power (CHP) . . . . .	116
5.4.1	Thermodynamic Motivation of Benefits Resulting from the Realization of Heat-and-Power Cogeneration . . . . .	116
5.4.2	Energy Effects of Heat-and-Power Cogeneration in CHP Plants. . . . .	118
5.4.3	The Share of the Fuel Consumption in the Production of Heat and the Production of Electricity. . . . .	120
5.4.4	Ecological Effects of Cogeneration . . . . .	122
5.4.5	Realization of Cogeneration by Adapting the Power Unit to Heat Production. . . . .	124
5.4.6	Gas and Gas-and-Steam CHP Units. . . . .	128
5.5	Trigeneration: CHP Plant Integrated with a Cooling System. . .	134
5.5.1	Introduction . . . . .	134
5.5.2	Centralized Production of Cooling Agents . . . . .	134
5.5.3	Trigeneration . . . . .	135
5.6	Analysis of the Index of Primary Energy Savings Concerning Cogeneration . . . . .	140
	References . . . . .	145
<b>6</b>	<b>Systems Approach to Energy-Ecological Analysis of Complex Buildings. . . . .</b>	<b>147</b>
6.1	Mathematical Model of the Balance of Direct Energy Consumption in Complex Buildings. . . . .	148
6.2	Mathematical Model of the Balance of Cumulative Energy Consumption . . . . .	154
6.3	Mathematical Model of the Analysis of Cumulative Emissions in Complex Buildings. . . . .	158
6.4	Mathematical Model for the Analysis of Thermo-Ecological Costs . . . . .	161
6.5	Algorithm of the System Evaluation of the Rationalization of the Energy Management of Complex Buildings. . . . .	167
	References . . . . .	169
<b>7</b>	<b>Systems Analysis of the Exploitation of Energy Management in Complex Buildings: Examples of Applications. . . . .</b>	<b>171</b>
7.1	Description of a Case-study Building. . . . .	172

7.2	Systems Analysis of Direct Energy Consumption in Investigated Complex Buildings . . . . .	174
7.3	Analysis of Cumulative Energy Consumption . . . . .	178
7.4	Analysis of Cumulative Emissions of Noxious Substances . . . . .	182
7.5	Thermo-ecological Cost Calculations . . . . .	184
7.6	Example of Systems Approach to the Analysis of the Application of Night-cooling Ventilation in Complex Buildings . . . . .	190
7.6.1	Night-cooling Ventilation Strategy . . . . .	190
7.6.2	Example of an Analysis of the Application of Night-cooling Ventilation in an Office Building . . . . .	192
7.7	Example of Systems Approach to the Analysis of the Application of a CHP Unit for Complex Buildings . . . . .	209
	References . . . . .	214
<b>8</b>	<b>Life Cycle Assessment of Energy Systems in Complex Buildings . . . . .</b>	<b>215</b>
8.1	Principles of the Energy-ecological Analysis in the Full Cycle of Life (LCA) . . . . .	216
8.2	Life Cycle Inventory Analysis. . . . .	219
8.3	Ecological Components of LCA . . . . .	221
8.3.1	Acidification. . . . .	223
8.3.2	Eutrophication of the Environment . . . . .	224
8.3.3	Greenhouse Effect. . . . .	224
8.3.4	Reduction of the Ozone Layer (Ozone Depletion). . . . .	225
8.3.5	Eco-Indicators . . . . .	226
8.4	Complex Buildings as an Object of LCA . . . . .	226
8.5	Example of LCA of a Case-study Building Using Dedicated Software . . . . .	229
8.5.1	Description of ENVEST Software. . . . .	229
8.5.2	Example of Calculations . . . . .	233
	References . . . . .	234
<b>9</b>	<b>Choice of the Structure of the Energy System of Complex Buildings in the Course of Preliminary Design . . . . .</b>	<b>237</b>
9.1	Systems Approach to the Preliminary Design of the Energy Management of Complex Buildings. . . . .	238
9.2	Choice of the Variants of Energy Management of Complex Buildings . . . . .	240
9.3	Structural Analysis of the Binary Input–Output Matrix . . . . .	248
9.4	Mathematical Optimization Model of the Energy Balance . . . . .	250
9.5	Decomposition of the Global Optimization Task . . . . .	253
9.6	Matrix Method for Calculating the Unit Costs of Energy Carriers . . . . .	256

9.7	Example of Calculations Concerning the Application of a Descriptive Model of Complex Buildings . . . . .	261
9.7.1	Scenario of the Energy Management of the Analyzed Complex Buildings . . . . .	261
9.7.2	Elaboration of the Set of Admissible Variants . . . . .	263
9.7.3	Energy Balance for the Selected Variant of Energy Management of Complex Buildings . . . . .	264
9.8	Example of the Application of an Optimization Model for the Choice of an Energy-Management Structure for an Industrial-Urban Complex . . . . .	274
9.8.1	Scenario of the Energy Management of the Industrial-Urban Complex . . . . .	274
9.8.2	Elaboration of the Set of Variants Concerning the Energy Management System and Determination of the Structure of the Binary Input–Output Matrix . . . . .	275
9.8.3	Structural Analysis of the Binary Input–Output Matrix . . . . .	277
9.8.4	Input Data . . . . .	282
9.8.5	Algorithms for the Determination of the Optimal Power Rating and Nominal Capacity of the Engines and Energy Equipment (variant III) . . . . .	285
9.8.6	Calculation Procedure and Results . . . . .	297
	References . . . . .	302
<b>Appendix A: Selected Elements of Boolean Algebra and Set Theory . . . . .</b>		<b>305</b>
<b>Appendix B: Elements of the Matrix Calculus . . . . .</b>		<b>307</b>
<b>Appendix C: Algorithmic Guidelines to Exergy Analysis . . . . .</b>		<b>317</b>
<b>Appendix D: Actual Diagrams and Duration Curves on the Example of the Demand and Production of Heat . . . . .</b>		<b>323</b>
<b>Appendix E: Directive 2004/8/EC of the European Parliament and of the Council of 11 February 2004 on the Promotion of Cogeneration Based on a Useful Heat Demand in the Internal Energy Market-Selected Paragraphs and Parts of Annexes . . . . .</b>		<b>329</b>
