1	Introduction	1
1.1	Unmanned Aerial Vehicles	1
1.1.1	Brief History	2
1.1.2	Applications	7
1.1.3	UAVs Classification	7
1.2	State of the Art	16
1.3	Problem Statement	20
1.4	Contributions	21
1.5	Book Outline	22
2	Modeling the Quad-Rotor Mini-Rotorcraft	23
2.1	The Quad-Rotor Mini-Rotorcraft	23
2.2	Quad-Rotor Dynamical Model	25
2.2.1	Euler–Lagrange Approach	25
2.2.2	Newton–Euler Approach	29
2.2.3	Newton’s Equations to Lagrange’s Equations	31
2.2.4	Newton–Euler Approach for an X-type Quad-Rotor	32
2.3	Concluding Remarks	34
3	The Quad-Rotor Experimental Platform	35
3.1	General Overview of UAV Sensing Technologies	35
3.2	System Architecture	37
3.3	Supervisory Ground Station	38
3.4	Quad-Rotor Design	40
3.4.1	Cross-Flyer Design	41
3.4.2	X-Flyer Design	43
3.4.3	Improved X-Flyer Design	45
3.5	Hierarchical Control Strategy	48
3.5.1	Altitude and Yaw Control	48
3.5.2	Control of Forward Position and Pitch Angle	49
3.5.3	Control of Lateral Position and Roll Angle	50

3.6	Autonomous Hover Flight Experiments	51
3.6.1	Cross-Flyer Hover Graphics	52
3.6.2	X-Flyer Hover Graphics	53
3.6.3	Improved X-Flyer Hover Graphics	55
3.7	Concluding Remarks	56
4	Hovering Flight Improvement	59
4.1	Introduction	59
4.2	Brushless DC Motor and Electronic Speed Controller	60
4.3	Control Strategy for Attitude Improvement	62
4.3.1	Attitude Control	63
4.3.2	Armature Current Control	64
4.4	Experimental System Configuration	66
4.4.1	Aerial Vehicle	66
4.4.2	Supervisory Ground Station	67
4.5	Experimental Results	67
4.6	Concluding Remarks	70
5	Imaging Sensors for State Estimation	71
5.1	Camera Model	71
5.1.1	Camera Calibration	76
5.2	Stereo Imaging	78
5.2.1	Epipolar Geometry	81
5.2.2	Calibration of the Stereo Imaging System	84
5.3	Optical Flow	90
5.3.1	Computing Methods	91
5.4	Implementing an Imaging System for the Quad-Rotor UAV	93
5.4.1	Deported and Embedded Systems	94
5.4.2	Challenges when Using Monocular and Stereo Imaging Systems	98
5.4.3	Monocular Imaging System Implementation	100
5.4.4	Stereo Imaging System Implementation	101
5.5	Concluding Remarks	102
6	Vision-Based Control of a Quad-Rotor UAV	103
6.1	Position Stabilization Using Vision	103
6.1.1	Introduction	103
6.1.2	Visual System Set-up	104
6.1.3	Vision-Based Position Estimation	105
6.1.4	Control Strategy	108
6.1.5	Experimental System Configuration	112
6.1.6	Experimental Applications	113
6.1.7	Final Comments	114
6.2	A Comparison of Nonlinear Controllers Using Visual Feedback	115
6.2.1	Introduction	115
6.2.2	System Set-up	116

6.2.3	Control Strategies	116
6.2.4	Experimental Applications	121
6.2.5	Final Comments	123
6.3	Vision-Based Altitude and Velocity Regulation	125
6.3.1	Introduction	125
6.3.2	System Set-up	125
6.3.3	Image Processing	126
6.3.4	Control Strategy	130
6.3.5	Experimental Application	132
6.3.6	Final Comments	136
6.4	Concluding Remarks	136
7	Combining Stereo Imaging, Inertial and Altitude Sensing Systems for the Quad-Rotor	139
7.1	Estimating Motion	139
7.1.1	Introduction	140
7.1.2	System Setup	142
7.1.3	Experimental Platform Overview	142
7.1.4	Stereo Visual Odometry	145
7.1.5	A Simple Strategy for Imaging, Inertial and Altitude Data Fusion	150
7.1.6	Experimental Results	151
7.1.7	Final Comments	152
7.2	Comparison of Different State Estimation Algorithms for Quad-Rotor Control	153
7.2.1	Introduction	154
7.2.2	Problem Statement	155
7.2.3	Design of Imaging-Inertial State Observers	156
7.2.4	Experimental Results	160
7.2.5	Final Comments	165
7.3	Concluding Remarks	167
8	Conclusions and Future Work	169
8.1	Conclusions	169
8.2	Future Work	171

Quad Rotorcraft Control

Vision-Based Hovering and Navigation

García Carrillo, L.R.; Dzul López, A.E.; Lozano, R.; Pégard, C.

2013, XIX, 179 p. 117 illus., 74 illus. in color., Hardcover

ISBN: 978-1-4471-4398-7
