

Contents

- 1 Introduction 1**
 - 1.1 Requirements and Constraints for Crowd Modeling 2
 - 1.2 Crowd Simulation Areas 3
 - References 4
- 2 State-of-the-Art 9**
 - 2.1 Crowd Dynamics 10
 - 2.2 Sociological Models of Crowds 10
 - 2.3 Crowd Simulation 11
 - 2.4 Behavioral Animation of Groups and Crowds 12
 - 2.5 Crowd Management Training Systems 15
 - 2.6 Group Behavior in Robotics and Artificial Life 16
 - 2.7 Environment Modeling for Crowds 16
 - 2.7.1 Environment Models 16
 - 2.7.2 Path Planning 17
 - 2.7.3 Collision Avoidance 19
 - 2.8 Crowd Rendering 20
 - 2.9 Crowds in Non-real-time Productions 22
 - 2.10 Crowds in Games 23
 - 2.11 Crowd Scenario Authoring 24
 - References 25
- 3 Modeling of Populations 31**
 - 3.1 Introduction 31
 - 3.2 Creative Methods 32
 - 3.3 Body Shape Capture 33
 - 3.4 Interpolated Techniques 34
 - 3.5 A Model for Generation of Population 36
 - 3.5.1 Definition of the Initial Data 38
 - 3.5.2 Choice of a Template 38
 - 3.5.3 Definition of New Somatotypes 38

3.5.4	Calculation of Influence of Sample Somatotypes	39
3.5.5	Calculation of Mesh Variation	40
3.5.6	Body Parts' Deformation	41
3.5.7	Results and Discussion	43
3.6	Using Computer Vision to Generate Crowds	46
3.6.1	A Model for Generating Crowds Based on Pictures	47
3.6.2	Results	56
3.7	Crowd Appearance Variety	57
3.7.1	Variety at Three Levels	58
3.7.2	Color Variety	59
3.7.3	Accessories	66
3.8	Final Remarks	78
	References	78
4	Virtual Human Animation	81
4.1	Introduction	81
4.2	Related Work in Locomotion Modeling	82
4.2.1	Kinematic Methods	82
4.2.2	Physically Based Methods	83
4.2.3	Motion Interpolation	84
4.2.4	Statistical Models	86
4.3	Principal Component Analysis	87
4.3.1	Motion Capture Data Process	87
4.3.2	Full-Cycle Model	88
4.3.3	Motion Extrapolation	90
4.4	Walking Model	93
4.4.1	Motion Interpolation and Extrapolation	93
4.5	Motion Retargeting and Timewarping	95
4.6	Motion Generation	98
4.6.1	Speed Control	98
4.6.2	Type of Locomotion Control	99
4.6.3	Personification Control	99
4.6.4	Motion Transition	100
4.6.5	Results	100
4.7	Animation Variety	102
4.7.1	Accessory Movements	103
4.8	Steering	104
4.8.1	The Need for a Fast Trajectory Control	104
4.8.2	The Seek and Funneling Controllers	105
4.9	Final Remarks	107
	References	107
5	Behavioral Animation of Crowds	111
5.1	Introduction	111
5.2	Related Work	111
5.3	Crowd Behavioral Models	114

5.3.1	PetroSim's Behavioral Model	114
5.3.2	A Physically Based Behavioral Model	120
5.4	Crowds Navigation	126
5.4.1	Robot Motion Planning	127
5.4.2	Crowd Motion Planning	129
5.4.3	A Decomposition Approach for Crowd Navigation	134
5.4.4	An Hybrid Architecture Based on Regions of Interest (ROI)	142
5.5	A Collision Avoidance Method Based on the Space Colonization Algorithm	145
5.5.1	The Crowd Model: Biocrowds	146
5.5.2	Experimental Results	150
5.6	Gaze Behaviors for Virtual Crowd Characters	157
5.6.1	Simulation of Attentional Behaviors	158
5.6.2	Gaze Behaviors for Crowds	159
5.6.3	Automatic Interest Point Detection	160
5.6.4	Motion Adaptation	161
5.7	Final Remarks	164
	References	164
6	Relating Real Crowds with Virtual Crowds	169
6.1	Introduction	169
6.2	Studying the Motion of Real Groups of People	169
6.2.1	Crowd Characteristics	169
6.2.2	Crowd Events	172
6.2.3	Parameters for Simulating Virtual Crowds Using Real Crowd Information	173
6.2.4	Simulating Real Scenes	173
6.3	Sociological Aspects	177
6.4	Computer Vision for Crowds	179
6.4.1	A Brief Overview on People Tracking	179
6.5	An Approach for Crowd Simulation Using Computer Vision	181
6.5.1	Using Computer Vision for People Tracking	182
6.5.2	Clustering of Coherent Trajectories	184
6.5.3	Generation of Extrapolated Velocity Fields	185
6.5.4	Simulation Based on Real Data	186
6.5.5	Some Examples	188
6.6	Final Remarks	190
	References	191
7	Crowd Rendering	195
7.1	Introduction	195
7.2	Virtual Human Representations	196
7.2.1	Human Template	196
7.2.2	Deformable Mesh	196
7.2.3	Rigid Mesh	198
7.2.4	Impostor	198

7.3	Architecture Pipeline	199
7.3.1	Human Data Structures	201
7.3.2	Pipeline Stages	203
7.4	Motion Kits	211
7.4.1	Data Structure	211
7.4.2	Architecture	213
7.5	Database Management	215
7.6	Shadows	216
7.7	Crowd Patches	218
7.7.1	Introduction	218
7.7.2	Patches and Patterns	220
7.7.3	Creating Patches	221
7.7.4	Creating Worlds	223
7.7.5	Applications and Results	224
7.8	Final Remarks	226
	References	227
8	Populated Environments	229
8.1	Introduction	229
8.2	Terrain Modeling	230
8.2.1	Plants and Lakes	232
8.2.2	Sky and Clouds	233
8.3	Generation of Virtual Environments	233
8.4	A Model for Floor Plans Creation	235
8.4.1	Treemaps and Squarified Treemaps	236
8.4.2	The Proposed Model	238
8.4.3	Results	243
8.5	Informed Environment	246
8.5.1	Data Model	249
8.5.2	Topo Mesh	251
8.6	Building Modeling	253
8.7	Landing Algorithms	253
8.8	Ontology-Based Simulation	254
8.8.1	Using Ontology for Crowd Simulation in Normal Life Situations	256
8.8.2	Applying Ontology to VR Environment	257
8.8.3	The Prototype of UEM	257
8.8.4	Simulation Results	260
8.9	Real-Time Rendering and Visualization	261
8.10	Implementation Aspects	263
8.11	Final Remarks	263
	References	264
9	Applications: Case Studies	267
9.1	Introduction	267
9.2	Crowd Simulation for Virtual Heritage	267

9.2.1	Virtual Population of Worshippers Performing Morning Namaz Prayer Inside a Virtual Mosque	268
9.2.2	Virtual Roman Audience in the Aphrodisias Odeon	271
9.2.3	Populating Ancient Pompeii with Crowds of Virtual Romans	275
9.3	Immersion in a Crowd	278
9.4	Crowdbrush	279
9.4.1	Brushes	281
9.5	Safety Systems	286
9.6	Olympic Stadium	287
9.7	Final Remarks	290
