1	Renewing Our View with the Concept of Exergy	1
1.1	“To Be Consumed” Versus “To Be Conserved”	2
1.2	Dynamic Equilibrium of a Working System: Exergy–Entropy Process	6
1.3	Nested Structure of Environmental Spaces: From us Humans to the Earth	9
1.4	Rate of Exergy Consumption and Human Well-Being Column 1: Enlarging Our View Angle to have a New Insight	11 12
	References	15
2	Exergy-Entropy Process of Global Environmental System	17
2.1	What is the Problem in So-Called Global Environmental Issues?	18
2.2	Review of Fundamental Concepts: Mass, Energy, Entropy, and Exergy.	22
2.3	Viewpoint of Exergy-Entropy Process	24
2.4	Circulation of Atmospheric Air and Water	27
2.4.1	Understanding the Relative Size of the Earth	29
2.4.2	Estimation of Average Atmospheric Temperature Near the Ground Surface	30
2.4.3	Dispersion and Separation of Water as the Working Fluid of Atmospheric Heat Pump	35
2.5	Circulation of Matter Within the Biosphere. Column 2: Estimating the Sizes of the Earth and the Sun Together with their Distance	39 43
	References	46
3	Built-Environmental Systems	49
3.1	Passive and Active Systems	49

3.2	Lighting Systems	57
3.2.1	A Fluorescent Lamp: Is It a Heater or a Light Emitter?	58
3.2.2	Comparison of Three Types of Lamp	59
3.2.3	Interaction Between Lighting, Heating, and Cooling Systems	63
3.3	Human-Body Thermoregulatory System	69
3.3.1	Basic Relationship Between Exergy Balance and Environmental Temperature	70
3.3.2	Human-Body Exergy-Consumption Rate in Winter Conditions	72
3.3.3	Human-Body Exergy-Consumption Rate in Summer Conditions	76
3.4	Exergetic Characteristics of Moist Air	79
3.5	Heating Systems	84
3.6	Cooling Systems	89
3.7	Fundamentals for Low-Exergy Cooling.	96
3.7.1	“Cool” Exergy Storage by Building Envelopes	96
3.7.2	Production of “Cool” Radiant Exergy by the Evaporation of Rainwater	103
3.8	Occupant Behavior and Exergy Consumption for Heating and Cooling	107
3.9	Production of “Chemical” and “Cool” Exergies by Photosynthesis.	113
3.10	Utilization of Rubbish and Sewage for the Sources of Material Exergy.	120
3.10.1	Composting Organic Waste Materials in Rubbish	120
3.10.2	Treatment and Utilization of Sewage for Fertilizer.	124
3.11	Production and Utilization of Iron and Concrete Materials for Building Envelopes.	128
	Column 3A: Anatomy and Taxonomy of Heating and Cooling.	133
	Column 3B: Fundamental Building Blocks Composing of the Whole Ecological Systems.	138
	References	141
4	Theory for Closed Systems.	145
4.1	Fundamental Concepts	146
4.1.1	Heat, Temperature, and Work	146
4.1.2	Quantifying the Dispersion of Energy from Work to Heat.	149
4.1.3	Carnot Engine, Entropy, and Absolute Temperature.	153
4.2	Energy, Entropy, and Exergy Balance Within a System	160
4.2.1	Energy Inflow, Storage, and Outflow	161

4.2.2	Entropy Inflow, Generation, Storage, and Outflow	162
4.2.3	Exergy Inflow, Consumption, Storage, and Outflow . . .	164
4.3	General Expression of Exergy Equation for a Closed System	165
4.4	Thermal Exergy	170
4.4.1	Warm and Cool Exergies as the Quantity of State	170
4.4.2	Warm and Cool Exergies as the Quantities of Flow . . .	174
4.4.3	Unsteady-State Conduction of Thermal Exergy	190
4.5	Solar Radiation	201
4.5.1	Photon Particles Coming from the Sun and Their Scattering	202
4.5.2	Energy, Entropy, and Exergy of Solar Radiation	205
4.5.3	Exergy Balance at a System Irradiated by Solar Radiation	208
4.6	Cool Radiant Exergy Emission by the Sky	214
	Column 4A: Quantifying Things	219
	Column 4B: Three Dipolar Characteristics of Quantities: Extensive versus Intensive, Flow versus State, and Continuous Versus Discontinuous	221
	Column 4C: A Short Story on the Science of Thermal Radiation	224
	References	228
5	Theory for Open Systems	231
5.1	Dispersion of Matter from a System into its Environmental Space	232
5.2	Sustainable Production of Work Through the Flow of Heat and the Circulation of Matter	234
5.2.1	A Thought Experiment with a Model Heat Engine . . .	235
5.2.2	A Peace Bird and Dynamic Equilibrium	241
5.3	Exergy Equation for an Open System in General	246
5.4	“Wet” and “Dry” Exergies: Material Exergy of Moist Air and Liquid Water	254
5.4.1	Mutual Dispersion of Water and Air	255
5.4.2	Moist Air	256
5.4.3	Saturated Water–Vapor Pressure	266
5.4.4	“Wet” Exergy Contained by Liquid Water	268
5.4.5	Exergy Balance at a Wet Surface	270
5.5	“Dense” and “Dilute” Exergies: Material Exergy of Solutions	279
5.5.1	Depression of Saturated Water–Vapor Pressure by Solutes	279
5.5.2	Material Exergy of Solutions in General	282

5.5.3	Exergetic Characteristic of the Solution of Nutrients	284
5.6	Material Exergy Involving Chemical Reactions	287
5.6.1	Exergy Balance in a Chemically Reactive System	288
5.6.2	A Variety of “Chemical” Exergy Consumption and Generation	291
5.6.3	Empirical Formulae for Estimating “Chemical” Exergies	304
5.7	Human Body	305
5.7.1	Water Balance	306
5.7.2	Energy and Entropy Balance	309
5.7.3	Thermal Exergy Balance	314
5.7.4	Exergetic View on the Paths of Heat Transfer	316
5.7.5	Human Body Exergy Balance Under Typical Conditions	324
5.7.6	Human Body Exergy Balance Under Transient Conditions	328
5.8	Plant Body	335
5.8.1	A Series of Reactions in Chloroplast	335
5.8.2	Exergy Balance	344
	Column 5A: The Deepest Nature to be Kept Closed and the Consequence of its Exploitation	346
	Column 5B: A Short Story on Finding “Vacuum” and its Relation to Finding the Characteristic Equation of Ideal Gas	351
	Column 5C: Cyclic Process from Sensation, via Perception and Cognition, to Behavior	353
	Column 5D: Various Forms of Leaves and Thermal Environment	358
