

Contents

1	Overview	1
1.1	Probabilistic and Randomized Methods	1
1.2	Structure of the Book	2
2	Elements of Probability Theory	7
2.1	Probability, Random Variables and Random Matrices	7
2.1.1	Probability Space	7
2.1.2	Real and Complex Random Variables	8
2.1.3	Real and Complex Random Matrices	9
2.1.4	Expected Value and Covariance	9
2.2	Marginal and Conditional Densities	10
2.3	Univariate and Multivariate Density Functions	10
2.4	Convergence of Random Variables	12
3	Uncertain Linear Systems	13
3.1	Norms, Balls and Volumes	13
3.1.1	Vector Norms and Balls	13
3.1.2	Matrix Norms and Balls	14
3.1.3	Volumes	16
3.2	Signals	16
3.2.1	Deterministic Signals	16
3.2.2	Stochastic Signals	17
3.3	Linear Time-Invariant Systems	18
3.4	Linear Matrix Inequalities	20
3.5	Computing \mathcal{H}_2 and \mathcal{H}_∞ Norms	22
3.6	Modeling Uncertainty of Linear Systems	23
3.7	Robust Stability of $M-\Delta$ Configuration	27
3.7.1	Dynamic Uncertainty and Stability Radii	28
3.7.2	Structured Singular Value and μ Analysis	30
3.7.3	Computation of Bounds on $\mu_{\mathbb{D}}$	32
3.7.4	Rank-One μ Problem and Kharitonov Theory	33
3.8	Robustness Analysis with Parametric Uncertainty	34

4	Linear Robust Control Design	41
4.1	\mathcal{H}_∞ Design	41
4.1.1	Regular \mathcal{H}_∞ Problem	45
4.1.2	Alternative LMI Solution for \mathcal{H}_∞ Design	46
4.1.3	μ Synthesis	48
4.2	\mathcal{H}_2 Design	50
4.2.1	Linear Quadratic Regulator	52
4.2.2	Quadratic Stabilizability and Guaranteed-Cost	53
4.3	Robust LMIs	55
4.4	Historical Notes and Discussion	56
5	Limits of the Robustness Paradigm	59
5.1	Computational Complexity	60
5.1.1	Decidable and Undecidable Problems	60
5.1.2	Time Complexity	61
5.1.3	NP-Completeness and NP-Hardness	62
5.1.4	Some NP-Hard Problems in Systems and Control	63
5.2	Conservatism of Robustness Margin	65
5.3	Discontinuity of Robustness Margin	68
6	Probabilistic Methods for Uncertain Systems	71
6.1	Performance Function for Uncertain Systems	71
6.2	Good and Bad Sets	74
6.3	Probabilistic Analysis of Uncertain Systems	77
6.4	Distribution-Free Robustness	88
6.5	Historical Notes on Probabilistic Methods	91
7	Monte Carlo Methods	93
7.1	Probability and Expected Value Estimation	93
7.2	Monte Carlo Methods for Integration	97
7.3	Monte Carlo Methods for Optimization	99
7.4	Quasi-Monte Carlo Methods	100
7.4.1	Discrepancy and Error Bounds for Integration	100
7.4.2	One-Dimensional Low Discrepancy Sequences	103
7.4.3	Low Discrepancy Sequences for $n > 1$	104
7.4.4	Dispersion and Point Sets for Optimization	106
8	Probability Inequalities	109
8.1	Probability Inequalities	109
8.2	Deviation Inequalities for Sums of Random Variables	111
8.3	Sample Complexity for Probability Estimation	113
8.4	Sample Complexity for Estimation of Extrema	117
8.5	Sample Complexity for the Binomial Tail	120
9	Statistical Learning Theory	123
9.1	Deviation Inequalities for Finite Families	123
9.2	Vapnik–Chervonenkis Theory	124

9.3	Sample Complexity for the Probability of Failure	129
9.4	Bounding the VC Dimension	131
9.5	Pollard Theory	133
10	Randomized Algorithms in Systems and Control	135
10.1	Preliminaries	135
10.2	Randomized Algorithms: Definitions	136
10.3	Randomized Algorithms for Probabilistic Analysis	137
10.4	Randomized Algorithms for Probabilistic Design	141
10.5	Computational Complexity	145
11	Sequential Methods for Probabilistic Design	147
11.1	Probabilistic Oracle	148
11.2	Unified Analysis of Sequential Schemes	150
11.3	Update Rules	152
11.3.1	Subgradient Update	153
11.3.2	Localization Methods	154
11.3.3	Probabilistic Ellipsoid Algorithm	155
11.3.4	Probabilistic Cutting Plane Techniques	156
11.4	Sequential Methods for Optimization	163
12	Scenario Approach to Probabilistic Design	165
12.1	Three Design Paradigms	166
12.1.1	Advantages of Scenario Design	167
12.2	Scenario Design	168
12.3	Scenario Optimization with Violated Constraints	173
12.3.1	Relations with Chance-Constrained Design	176
13	Learning-Based Probabilistic Design	181
13.1	Sample Complexity of Nonconvex Scenario Design	183
13.2	Sequential Algorithm for Nonconvex Scenario	186
14	Random Number and Variate Generation	193
14.1	Random Number Generators	193
14.1.1	Linear Congruential Generators	194
14.1.2	Random Number Generators	196
14.2	Nonuniform Random Variables	198
14.2.1	Statistical Tests for Pseudo-Random Numbers	201
14.3	Methods for Multivariate Random Generation	203
14.3.1	Rejection Methods	205
14.3.2	Conditional Density Method	208
14.4	Asymptotic Methods Based on Markov Chains	209
14.4.1	Random Walks on Graphs	209
14.4.2	Methods for Continuous Distributions	211
14.4.3	Uniform Sampling in a Convex Body	213

15	Statistical Theory of Random Vectors	217
15.1	Radially Symmetric Densities	217
15.2	Statistical Properties of ℓ_p Radial Real Vectors	218
15.3	Statistical Properties of ℓ_p Radial Complex Vectors	220
15.4	ℓ_p Radial Vectors and Uniform Distribution in $\mathcal{B}_{\ \cdot\ _p}$	223
15.5	Statistical Properties of ℓ_2^W Radial Vectors	225
16	Vector Randomization Methods	231
16.1	Rejection Methods for Uniform Vector Generation	231
16.2	Generalized Gamma Density	233
16.3	Uniform Sample Generation of Real Vectors	234
16.4	Uniform Sample Generation of Complex Vectors	238
16.5	Uniform Generation of Stable Polynomials	239
17	Statistical Theory of Random Matrices	243
17.1	Radial Matrix Densities	243
17.1.1	Hilbert–Schmidt ℓ_p Radial Matrix Densities	243
17.1.2	ℓ_p Induced Radial Matrix Densities	244
17.2	Statistical Properties of ℓ_1 and ℓ_∞ Induced Densities	244
17.2.1	Real Matrices with ℓ_1/ℓ_∞ Induced Densities	245
17.2.2	Complex Matrices with ℓ_1/ℓ_∞ Induced Densities	247
17.3	Statistical Properties of σ Radial Densities	248
17.3.1	Positive Definite Matrices	249
17.3.2	Real σ Radial Matrix Densities	254
17.3.3	Complex σ Radial Matrix Densities	259
17.4	Statistical Properties of Unitarily Invariant Matrices	264
18	Matrix Randomization Methods	267
18.1	Uniform Sampling in Hilbert–Schmidt Norm Balls	267
18.2	Uniform Sampling in ℓ_1 and ℓ_∞ Induced Norm Balls	268
18.3	Rejection Methods for Uniform Matrix Generation	268
18.4	Uniform Generation of Complex Matrices	270
18.4.1	Sample Generation of Singular Values	270
18.4.2	Uniform Generation of Unitary Matrices	277
18.5	Uniform Generation of Real Matrices	278
18.5.1	Sample Generation of Singular Values	278
18.5.2	Uniform Generation of Orthogonal Matrices	280
19	Applications of Randomized Algorithms	283
19.1	Overview of Systems and Control Applications	283
19.2	PageRank Computation and Multi-agent Systems	290
19.2.1	Search Engines and PageRank	290
19.2.2	PageRank Problem	291
19.2.3	Distributed Randomized Approach	295
19.2.4	Distributed Link Matrices and Their Average	296
19.2.5	Convergence of Distributed Update Scheme	297
19.2.6	Relations to Consensus Problems	297

19.3	Control Design of Mini-UAVs	299
19.3.1	Modeling the MH1000 Platform	301
19.3.2	Uncertainty Description	302
19.3.3	Randomized Control Algorithms	303
19.4	Performance of High-Speed Networks	305
19.4.1	Network Model	305
19.4.2	Cost Function	306
19.4.3	Robustness for Symmetric Single Bottleneck	307
19.4.4	Randomized Algorithms for Nonsymmetric Case	309
19.4.5	Monte Carlo Simulation	310
19.4.6	Quasi-Monte Carlo Simulation	311
19.4.7	Numerical Results	312
19.5	Probabilistic Robustness of Flexible Structures	314
19.6	Stability of Quantized Sampled-Data Systems	318
19.6.1	Problem Setting	318
19.6.2	Randomized Algorithm	322
19.6.3	Numerical Experiments	323
19.7	Randomized Algorithms Control Toolbox	327
Appendix	329
A.1	Transformations Between Random Matrices	329
A.2	Jacobians of Transformations	330
A.3	Selberg Integral	331
A.4	Dyson–Mehta Integral	332
List of Symbols	333
References	337
Index	353

Randomized Algorithms for Analysis and Control of
Uncertain Systems

With Applications

Tempo, R.; Calafiore, G.; Dabbene, F.

2013, XXIV, 360 p., Hardcover

ISBN: 978-1-4471-4609-4
