

Contents

1	Introduction	1
1.1	Introduction	1
1.2	Example System	2
1.3	Simulation and System Parametrisation	6
	References	7
2	Exergy Concept and Determination	9
2.1	Introduction	9
2.2	Environment and Dead State.	9
2.3	Physical Exergy.	11
2.3.1	Direct Method	12
2.3.2	Indirect Method	17
2.4	Chemical Exergy.	19
2.5	Chemical Exergy of Substances.	20
2.5.1	General Method	20
2.5.2	Alternative Method	21
2.5.3	Chemical Exergy of a Stream.	22
2.5.4	Chemical Exergy of a Fuel Stream	24
2.6	Total Exergy of a Matter Stream.	24
2.6.1	Exergy of an Ideal Gas Mixture	24
2.6.2	Exergy of an Ideal Liquid Solution	25
2.7	Exergy of Non-Matter Streams	26
2.7.1	Exergy of Work	26
2.7.2	Exergy of Electricity	26
2.7.3	Exergy of Heat Flows	26
2.7.4	Exergy of Solar Radiation	26
	References	27

3	Matrix Algebra and Balances	29
3.1	Introduction	29
3.2	Incidence Matrix: Physical Representation	30
3.3	Energy and Material Balances	32
3.4	Exergy Balance	35
3.5	Conclusions	38
	References	38
4	Exergetic Cost	39
4.1	Introduction	39
4.2	“R/P/I” Representation	40
4.3	Exergetic Cost	45
4.4	Branchings	47
4.4.1	Internal Branchings	47
4.4.2	External Branchings	49
4.5	Determination of the Exergetic Costs	51
4.6	Performance and Ratios	58
4.7	Unit Exergetic Cost Build-Up	59
	References	61
5	Thermoeconomic Cost	63
5.1	Introduction	63
5.2	Thermoeconomic Balance	64
5.3	Fixed and Variable Costs	68
5.4	Variable Thermoeconomic Costs	69
5.5	Fixed Cost Calculation	71
5.6	Thermoeconomic Cost Buildup	74
5.7	Exergoeconomic Factor	77
	References	79
	Appendix: Use of MHBT for the Practical Case	81

Practical Approach to Exergy and Thermoeconomic
Analyses of Industrial Processes

Querol, E.; Gonzalez-Regueral, B.; Perez-Benedito, J.L.

2013, XIV, 84 p. 19 illus. With online files/update.,

Softcover
