

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Reactive Power and Voltage Stability	1
1.2	Reactive Power Grid Code Requirements	2
	References	7
<b>2</b>	<b>Facts Devices</b>	<b>9</b>
2.1	Static Var Compensator (SVC)	9
2.1.1	Mode of Operation	10
2.2	Static Synchronous Compensator (STATCOM)	13
2.2.1	Mode of Operation	14
2.2.2	Control Techniques	15
2.2.3	Restrictions of Operation	15
2.2.4	Application of the STATCOM in Wind Farms	16
2.3	STATCOM Versus SVC	17
2.4	Dynamic Voltage Restorer (DVR)	18
2.4.1	DVR Control	19
2.4.2	Numerical Results	21
2.4.3	Reactive Power Support Under Voltage Dips in Fixed-Speed Wind Farms	24
	References	29
<b>3</b>	<b>Wind Generators</b>	<b>31</b>
3.1	Wind Turbine	32
3.2	Mechanical Model	33
3.3	Fixed Speed Wind Turbines	34
3.4	Doubly Fed Induction Generators	35
3.4.1	Steady State Model of the DFIG	35
3.4.2	Active Power Delivery to the Grid	37
3.4.3	Reactive Power Delivery to the Grid	38
3.4.4	DFIG Limitations on Deliverable Power	38
3.4.5	Maximum DFIG Capability	43

3.5	Direct Drive Generators . . . . .	44
3.5.1	Power Capability of Direct Driven Wind Generators . . . .	47
3.5.2	PQ Capability . . . . .	51
	References . . . . .	53
<b>4</b>	<b>Reactive Power Optimization . . . . .</b>	<b>55</b>
4.1	Introduction to the Optimum Load Flow . . . . .	55
4.2	Formulation . . . . .	56
4.3	Constraints . . . . .	57
4.4	Models Based on Voltage Stability Concepts . . . . .	58
4.5	Selection of Objective Function . . . . .	59
4.5.1	Minimization of Variable Costs . . . . .	59
4.5.2	Minimization of Variable Costs and Active Power Losses . . . . .	60
4.5.3	Minimization of Variable Costs and Fuel Cost . . . . .	60
4.5.4	Minimization of the Deviation from a Set Point . . . . .	61
4.5.5	Multi-objective Formulation . . . . .	61
4.6	Methods to Solve the Problem of Reactive Power Planning . . . .	62
4.6.1	Conventional Methods . . . . .	63
4.6.2	Advanced Methods . . . . .	64
4.7	Example . . . . .	69
4.7.1	Initial Population . . . . .	69
4.7.2	Evaluation . . . . .	70
4.7.3	Selection . . . . .	70
4.7.4	Crossover Operation . . . . .	72
4.7.5	Mutation . . . . .	72
4.7.6	New Population . . . . .	73
4.7.7	Final Solution . . . . .	73
	References . . . . .	75
<b>5</b>	<b>Voltage Stability in Power Networks with Wind Power Generation . . . . .</b>	<b>77</b>
5.1	Voltage Stability Definition and Concepts . . . . .	77
5.2	Voltage Stability in a Two-Bus Power System . . . . .	78
5.3	Voltage Stability Enhancement by Wind Farms . . . . .	81
5.4	Optimal Voltage Stability . . . . .	83
5.5	Case Studies . . . . .	85
5.5.1	IEEE-14 Bus Power System . . . . .	85
5.5.2	Application Case . . . . .	90
	References . . . . .	94
<b>6</b>	<b>Reactive Power Management . . . . .</b>	<b>97</b>
6.1	Reactive Power Planning . . . . .	97
6.1.1	Objective Function . . . . .	98
6.1.2	Results for an Existing 140-Bus System . . . . .	100

6.2	Multiobjective Formulation . . . . .	106
6.3	Reactive Power Ancillary Service . . . . .	107
6.3.1	Valley Power Demand and Maximum Wind Power Production . . . . .	109
6.3.2	Valley Power Demand and Minimum Wind Power Production . . . . .	110
6.3.3	Peak Power Demand and Maximum Wind Power Production . . . . .	110
6.3.4	Peak Power Demand and Minimum Wind Power Production . . . . .	111
6.4	Reactive Power Dispatch . . . . .	112
	References . . . . .	115
	<b>Appendix . . . . .</b>	<b>117</b>

Reactive Power Management of Power Networks with  
Wind Generation

Amaris, H.; Alonso, M.; Alvarez Ortega, C.

2013, X, 126 p., Hardcover

ISBN: 978-1-4471-4666-7
