Part I Basic Methods and Theory

1	Introduction	3
1.1	Control-System Representations	4
1.2	System Stabilities	5
1.3	Coprime Factorization and Stabilizing Controllers	7
1.4	Signals and System Norms	9
1.4.1	Vector Norms and Signal Norms	9
1.4.2	System Norms	10
2	Modeling of Uncertain Systems	13
2.1	Unstructured Uncertainties	13
2.2	Parametric Uncertainty	17
2.3	Linear Fractional Transformations	19
2.4	Structured Uncertainties	21
3	Robust Design Specifications	23
3.1	Small-Gain Theorem and Robust Stabilization	23
3.2	Performance Considerations	26
3.3	Structured Singular Values	27
4	\mathcal{H}_∞ Design	31
4.1	Mixed Sensitivity \mathcal{H}_∞ Optimization	31
4.2	2-Degree-of-Freedom \mathcal{H}_∞ Design	33
4.3	\mathcal{H}_∞ Suboptimal Solutions	34
4.3.1	Solution Formulas for Normalized Systems	35
4.3.2	Solution to S -over- $K S$ Design	38
4.3.3	The Case of $D_{22} \neq 0$	39
4.3.4	Normalization Transformations	40
4.3.5	Direct Formulas for \mathcal{H}_∞ Suboptimal Central Controller	41
4.4	Formulas for Discrete-Time Cases	45

5	\mathcal{H}_∞ Loop-Shaping Design Procedures	49
5.1	Robust Stabilization Against Normalized Coprime Factor Perturbations	49
5.2	Loop-Shaping Design Procedures	52
5.3	Formulas for the Discrete-Time Case	54
5.3.1	Normalized Coprime Factorization of Discrete-Time Plant	54
5.3.2	Robust Controller Formulas	56
5.3.3	The Strictly Proper Case	57
5.3.4	On the Three DARE Solutions	58
5.4	A Mixed Optimization Design Method with LSDP	60
6	μ-Analysis and Synthesis	65
6.1	Consideration of Robust Performance	65
6.2	μ -Synthesis: D - K Iteration Method	68
6.3	μ -Synthesis: μ - K Iteration Method	70
7	Lower-Order Controllers	73
7.1	Absolute-Error Approximation Methods	74
7.1.1	Balanced Truncation Method	75
7.1.2	Singular Perturbation Approximation	76
7.1.3	Hankel-Norm Approximation	77
7.2	Reduction via Fractional Factors	80
7.2.1	Fractional Balanced Truncation (FBT) Method	82
7.2.2	Fractional Singular Perturbation Approximation (FSPA) Method	82
7.3	Relative-Error Approximation Methods	84
7.4	Frequency-Weighted Approximation Methods	86
7.4.1	Frequency-Weighted Balanced Truncation (FWBT)	88
7.4.2	Frequency-Weighted Singular Perturbation Approximation (FWSPA)	89
7.4.3	Frequency-Weighted Moduli Truncation Method (FWMT)	89
8	LMI Approach	93
8.1	Basics About LMI	93
8.2	Control Problems Using LMI	94
8.2.1	Lyapunov Stability Criterion	94
8.2.2	Stabilization by State Feedback	94
8.2.3	Computation of \mathcal{L}_2 Norm	95
8.2.4	Computation of \mathcal{H}_∞ Norm	97
8.2.5	Formulation of LQR in LMI	97
8.3	A Few More Properties Concerning LMI	99
8.3.1	Congruence Transformation	99
8.3.2	Schur Complements for Nonstrict Inequalities	100
8.3.3	Projection and Finsler's Lemmas	100
8.3.4	The S-Procedure for Quadratic Functions	102
8.3.5	Dualization Lemma	102

Part II Introduction to Robust Control Toolbox v3

9	Building Uncertain Models	107
9.1	LTI Models	107
9.2	Structured Uncertainty Models	121
9.2.1	Uncertain Real Parameters	123
9.2.2	Uncertain State-Space Systems	124
9.2.3	Properties of Uncertain Systems	125
9.2.4	Other Functions to Build Uncertain Models	130
9.2.5	Decomposing Uncertain Objects	131
9.3	Building Uncertain Models Using <code>iconnect</code> and <code>sysic</code>	132
9.4	Unstructured Uncertainty Models	134
9.4.1	Models with Additive Uncertainty	135
9.4.2	Models with Multiplicative Uncertainty	138
9.4.3	Unmodeled Dynamics	140
9.4.4	Multivariable Plants with Unstructured Uncertainty	142
9.5	Exercises	143
10	Robust Stability and Performance	145
10.1	Robust Stability Analysis	145
10.2	Robust Performance Analysis	154
10.3	Worst-Case Gain	165
10.4	Exercises	170
11	\mathcal{H}_∞ Design	173
11.1	\mathcal{H}_∞ Loop-Shaping Design	173
11.2	Mixed Sensitivity Design	179
11.3	Other Versions of \mathcal{H}_∞ Design	187
11.3.1	\mathcal{H}_∞ Control with Models	187
11.3.2	Two-Degree-of-Freedom \mathcal{H}_∞ Control	194
11.4	Exercises	200
12	μ-Synthesis	203
12.1	The μ -Synthesis Problem	203
12.2	μ -Synthesis by D - K Iterations	205
12.3	Versions of μ -Synthesis	212
12.3.1	μ -Synthesis with Model	212
12.3.2	μ -Synthesis of 2-Degree-of-Freedom Controller	214
12.4	Practical Aspects of μ -Analysis and μ -Synthesis	216
12.5	Exercises	219
13	Analysis and Design of Parameter-Dependent Systems	221
13.1	Representation of Parameter-Dependent Systems	221
13.1.1	SYSTEM Matrix	221
13.1.2	Affine Parameter-Dependent Models	223
13.1.3	Polytopic Models	227
13.2	Analysis of Parameter-Dependent Systems	229

13.3	Gain Scheduling Design for Parameter-Dependent Systems . . .	234
13.4	Exercises	246

Part III Design Examples

14	Robust Control of a Hard Disk Drive	249
14.1	Hard Disk Drive Servo System	249
14.2	Derivation of Uncertainty Model	255
14.3	Closed-Loop System Design Specifications	258
14.3.1	Nominal Performance	260
14.3.2	Robust Stability	260
14.3.3	Robust Performance	260
14.4	System Interconnections	261
14.5	Controller Design in Continuous-Time	262
14.5.1	μ -Design	263
14.5.2	\mathcal{H}_∞ Design	269
14.5.3	\mathcal{H}_∞ Loop-Shaping Design	269
14.6	Comparison of Designed Controllers	270
14.7	Controller-Order Reduction	277
14.8	Design of Discrete-Time Controller	279
14.9	Nonlinear System Simulation	284
14.10	Conclusions	289
14.11	Notes and References	289
15	A Triple Inverted Pendulum Control System Design	291
15.1	System Description	292
15.2	Modeling of Uncertainties	295
15.3	Design Specifications	302
15.3.1	Robust Stability	304
15.3.2	Nominal Performance	304
15.3.3	Robust Performance	304
15.4	System Interconnections	306
15.5	\mathcal{H}_∞ Design	308
15.6	μ -Synthesis	313
15.7	Nonlinear System Simulation	322
15.8	Conclusions	322
15.9	Notes and References	325
16	Robust Control of a Distillation Column	327
16.1	Introduction	327
16.2	Dynamic Model of the Distillation Column	328
16.3	Uncertainty Modeling	332
16.4	Closed-Loop System Performance Specifications	334
16.5	Open-Loop and Closed-Loop System Interconnections	339
16.6	Controller Design	342
16.6.1	Loop-Shaping Design	343
16.6.2	μ -Synthesis	346

16.7	Nonlinear System Simulation	362
16.8	Conclusions	364
16.9	Notes and References	365
17	Robust Control of a Flexible-Link Manipulator	367
17.1	Dynamic Model of the Flexible Manipulator	368
17.2	A Linear Model of the Uncertain System	371
17.3	System Performance Specifications	378
17.4	System Interconnections	381
17.5	Controller Design and Analysis	383
17.6	Nonlinear System Simulations	394
17.7	Conclusions	395
17.8	Notes and References	399
18	Robust Control of a Twin-Rotor Aerodynamic System	401
18.1	Twin-Rotor Aerodynamic System	401
18.2	Nonlinear System Model	402
18.3	Linearized System Model	407
18.4	Uncertainty Modeling	410
18.5	Closed-Loop System Performance Requirements	412
	18.5.1 Robust Stability	414
	18.5.2 Nominal Performance	414
	18.5.3 Robust Performance	414
18.6	System Interconnections	415
18.7	μ -Synthesis	415
18.8	Nonlinear System Simulation	427
18.9	Experimental Results	428
18.10	Conclusions	428
	18.10.1 Notes and References	433
19	Robust Control of Self-balancing Two-Wheeled Robot	435
19.1	Introduction	435
19.2	Uncertain Model of the Two-Wheeled Robot	436
19.3	Design of Robust Controller	440
19.4	Closed-Loop System Properties	444
19.5	Experimental Results	450
19.6	Conclusions	452
19.7	Notes and References	453
	References	455
	Index	465
