

Preface

This is the joint proceedings of the two conferences:

1. **Infinite Analysis 11—Frontier of Integrability—**

University of Tokyo, Japan in July 25th to 29th, 2011,

2. **Symmetries, Integrable Systems and Representations**

Université Claude Bernard Lyon 1, France in December 13th to 16th, 2011.

As both of the conferences had been organized in the occasion of 60th anniversary of Prof. Michio Jimbo, the topics covered in this proceedings are very large. Indeed, it includes combinatorics, differential equations, integrable systems, probability, representation theory, solvable lattice models, special functions etc. We hope this volume might be interesting and useful both for young researchers and experienced specialists in these domains.

We shall mention about the financial supports we had; the conference at Tokyo was supported in part by Global COE programme “The research and training center for new development in mathematics” (Graduate School of Mathematical Science, University of Tokyo), and the conference at Lyon was supported by Institut Universitaire de France, GDR 3395 ‘Théorie de Lie algébrique et géométrie’, GDRE 571 ‘Representation theory’, Université Lyon 1 and Université Paris 6.
