
Contents

1	Introduction	1
1.1	Overview of VoIP	1
1.2	How VoIP Works and Factors That Affect Quality	3
1.3	VoIP Tools	4
1.3.1	Microsoft's Lync	4
1.3.2	Skype	5
1.3.3	Google Talk	7
1.3.4	X-Lite	8
1.4	VoIP Trend	9
1.5	VoIP Protocol Stack and the Scope of the Book	12
1.6	Summary	14
2	Speech Compression	17
2.1	Introduction	17
2.2	Speech Compression Basics	18
2.2.1	Speech Signal Digitisation	18
2.2.2	Speech Waveform and Spectrum	21
2.2.3	How Is Human Speech Produced?	23
2.3	Speech Compression and Coding Techniques	25
2.3.1	Waveform Compression Coding	26
2.3.2	Parametric Compression Coding	28
2.3.3	Hybrid Compression Coding—Analysis-by-Synthesis	31
2.3.4	Narrowband to Fullband Speech Audio Compression	35
2.4	Standardised Narrowband to Fullband Speech/Audio Codecs	36
2.4.1	ITU-T G.711 PCM and G.711.1 PCM-WB	36
2.4.2	ITU-T G.726 ADPCM	37
2.4.3	ITU-T G.728 LD-CELP	38
2.4.4	ITU-T G.729 CS-ACELP	38
2.4.5	ITU-T G.723.1 MP-MLQ/ACELP	39
2.4.6	ETSI GSM	39
2.4.7	ETSI AMR	40
2.4.8	IETF's iLBC	41
2.4.9	Skype/IETF's SILK	41
2.4.10	ITU-T G.722 ADPCM-WB	42

2.4.11	ITU-T G.722.1 Transform Coding	43
2.4.12	ETSI AMR-WB and ITU-T G.722.2	44
2.4.13	ITU-T G.719 Fullband Audio Coding	44
2.4.14	Summary of Narrowband to Fullband Speech Codecs	45
2.5	Illustrative Worked Examples	45
2.5.1	Question 1	45
2.5.2	Question 2	47
2.5.3	Question 3	47
2.6	Summary	48
2.7	Problems	49
3	Video Compression	53
3.1	Introduction to Video Compression	53
3.2	Video Compression Basics	55
3.2.1	Digital Image and Video Colour Components	55
3.2.2	Colour Sub-sampling	56
3.2.3	Video Resolution and Bandwidth Requirement	57
3.3	Video Compression Techniques	58
3.4	Lossless Video Compression	58
3.5	Lossy Video Compression	59
3.5.1	Predictive Coding	59
3.5.2	Quantisation	60
3.5.3	Transform Coding	61
3.5.4	Interframe Coding	62
3.6	Video Coding Standards	63
3.6.1	H.120	63
3.6.2	H.261	63
3.6.3	MPEG 1&2	64
3.6.4	H.263	67
3.6.5	MPEG-4	68
3.6.6	H.264	68
3.6.7	Highly Efficiency Video Coding (HEVC)	69
3.7	Illustrative Worked Examples	69
3.7.1	Question 1	69
3.7.2	Question 2	70
3.7.3	Question 3	71
3.8	Summary	71
3.9	Problems	72
4	Media Transport for VoIP	73
4.1	Media Transport over IP Networks	73
4.2	TCP or UDP?	74
4.3	Real-Time Transport Protocol—RTP	76
4.3.1	RTP Header	76
4.3.2	RTP Header for Voice Call Based on Wireshark	78
4.3.3	RTP Payload and Bandwidth Calculation for VoIP	80

4.3.4	Illustrative Worked Example	83
4.3.5	RTP Header for Video Call Based on Wireshark	84
4.4	RTP Control Protocol—RTCP	88
4.4.1	RTCP Sender Report and Example	89
4.4.2	RTCP Receiver Report and Example	91
4.4.3	RTCP Source Description and Example	92
4.4.4	RTCP BYE Packet and Example	94
4.4.5	Extended RTCP Report—RTCP XR for VoIP Metrics	95
4.5	Compressed RTP—cRTP	96
4.5.1	Basic Concept of Compressed RTP—cRTP	96
4.5.2	Illustrative Worked Example	98
4.6	Summary	98
4.7	Problems	99
5	VoIP Signalling—SIP	101
5.1	What is Session Initiation Protocol?	101
5.1.1	SIP Network Elements	102
5.1.2	User Agent	103
5.1.3	Proxy Server	104
5.1.4	Redirect Server	105
5.1.5	Registrar	105
5.1.6	Location Server	106
5.2	SIP Protocol Structure	106
5.2.1	SIP Message Format	107
5.3	Session Descriptions Protocol	113
5.3.1	Session Description	114
5.3.2	Time Description	115
5.3.3	Media Description	115
5.3.4	Attributes	116
5.3.5	Example of SDP Message from Wireshark	117
5.4	SIP Messages Flow	117
5.4.1	Session Establishment	118
5.5	Summary	120
5.6	Problems	120
6	VoIP Quality of Experience (QoE)	123
6.1	Concept of Quality of Service (QoS)	123
6.1.1	What is Quality of Service (QoS)?	123
6.1.2	QoS Metrics and Measurements	124
6.1.3	Network Packet Loss and Its Characteristics	125
6.1.4	Delay, Delay Variation (Jitter) and Its Characteristics	130
6.2	Quality of Experience (QoE) for VoIP	135
6.2.1	What is Quality of Experience (QoE)?	135
6.2.2	Factors Affect Voice Quality in VoIP	136
6.2.3	Overview of QoE for Voice and Video over IP	137
6.3	Subjective Speech Quality Assessment	138

6.4	Objective Speech Quality Assessment	141
6.4.1	Comparison-Based Intrusive Objective Test (Full-Reference Model)	141
6.4.2	Parameter-Based Measurement: E-Model	145
6.4.3	A Simplified and Applicable E-Model	147
6.5	Subjective Video Quality Assessment	148
6.6	Objective Video Quality Assessment	150
6.6.1	Full-Reference (FR) Video Quality Assessment	150
6.6.2	Reduced-Reference (RR) Video Quality Assessment	153
6.6.3	No-Reference Video Quality Assessment	154
6.7	Illustrative Worked Examples	155
6.7.1	Question 1	155
6.7.2	Question 2	156
6.7.3	Question 3	157
6.8	Summary	158
6.9	Problems	159
7	IMS and Mobile VoIP	163
7.1	What Is IP Multimedia Subsystem?	163
7.1.1	What Do We Need IMS for?	163
7.1.2	IMS Architecture	164
7.1.3	IMS Elements	167
7.1.4	IMS Services	173
7.1.5	IMS Signalling and Bearer Traffic Interfaces	174
7.2	Mobile Access Networks	177
7.2.1	Cellular Standards	178
7.2.2	The GSM Standard	179
7.2.3	The UMTS Standard	181
7.2.4	Long-Term Evolution	186
7.3	Summary	188
7.4	Problems	189
8	Case Study 1—Building Up a VoIP System Based on Asterisk	193
8.1	What is Asterisk?	193
8.1.1	Channel Modules	194
8.1.2	Codec Translator Modules	194
8.1.3	Application Modules	195
8.1.4	File Format Modules	195
8.1.5	Installing Asterisk	196
8.2	What Is X-Lite 4	197
8.2.1	Using X-Lite	197
8.3	Voice and Video Injection Tools	201
8.3.1	Manycam Video Injection Tool	201
8.3.2	Virtual Audio Cable Injection Tool	202
8.4	Lab Scenario	203
8.5	Adding SIP Phones	205

8.6	Configuring Dial Plans	206
8.7	Configuring DAHDI Channels	207
8.8	Starting and Stopping Asterisk	208
8.9	Setup SIP Phone	208
8.10	Making Voice Calls Between SIP Phones	209
8.11	Making Video Calls Between SIP Phones	211
8.12	Making Voice Calls Between SIP and Analogue Phones	211
8.13	Problems	212
9	Case Study 2—VoIP Quality Analysis and Assessment	215
9.1	What Is Wireshark	215
9.1.1	Live Capture and Offline Analysis	215
9.1.2	Three-Pane Packet Browser	216
9.1.3	VoIP Analysis	218
9.2	Wireshark Familiarization	222
9.3	Introduction to Netem and tc Commands	223
9.3.1	Adding qdisc	224
9.3.2	Changing and Deleting qdisc	224
9.4	Lab Scenario	225
9.4.1	Challenges	225
9.5	SIP Registration	226
9.5.1	Challenges	226
9.6	SIP Invite	227
9.6.1	Challenges	227
9.7	VoIP Messages Flow	230
9.7.1	Challenges	230
9.8	VoIP Quality Assessment: Packet Losses	232
9.8.1	Challenges	232
9.9	VoIP Quality Assessment: Delay Variation	233
9.9.1	Challenges	234
9.10	Problems	234
10	Case Study 3—Mobile VoIP Applications and IMS	237
10.1	What Is Open Source IMS Core	237
10.1.1	The Main Features of OSIMS Core P-CSCF	238
10.1.2	The Main Features of OSIMS Core I-CSCF	239
10.1.3	The Main Features of OSIMS Core S-CSCF	240
10.1.4	The Main Features of OSIMS Core FHoSS	241
10.1.5	Installation and Configuration of OSIMS Core	242
10.2	What Is Android	246
10.2.1	Android Smart Phone Market Share	248
10.2.2	Android Architecture	248
10.2.3	The History of Android	249
10.2.4	IMSDroid IMS Client	250
10.3	Lab Scenario	253
10.3.1	Configuring IMSDroid	254

10.3.2 Adding OSIMS Core Subscribers	255
10.4 Making Voice and Video Calls	260
10.4.1 Placing a Call	260
10.4.2 In Call Screen	261
10.5 Problems	261
Index	265

Guide to Voice and Video over IP

For Fixed and Mobile Networks

Sun, L.; Mkwawa, I.-H.; Jammeh, E.; Ifeachor, E.

2013, XII, 272 p., Hardcover

ISBN: 978-1-4471-4904-0
