

Contents

1	Introduction	1
1.1	Thesis Outline and Contributions.	3
	References	4
2	Dialogue System Theory	7
2.1	Components of a Spoken Dialogue System.	7
2.1.1	Speech Recognition.	7
2.1.2	Spoken Language Understanding	8
2.1.3	Decision Making.	10
2.1.4	Response Generation	11
2.1.5	Extensions to the Dialogue Cycle	11
2.2	User Simulation.	12
2.3	The Dialogue Manager.	13
2.3.1	Hand-Crafted Dialogue Management.	13
2.3.2	Partial Observability	15
2.3.3	Policy Learning	16
2.3.4	Partially Observable Markov Decision Processes	17
	References	22
3	Maintaining State	27
3.1	Bayesian Networks	28
3.2	Bayesian Networks for Dialogue State	29
3.2.1	Goal Dependencies	30
3.2.2	The History Nodes	31
3.2.3	Sub-Components for the User Act Nodes.	31
3.2.4	Remaining Nodes	32
3.3	TOWNINFO States: An Example	33
3.4	Factor Graphs	34

3.5	Belief Propagation	35
3.5.1	The Approximation	36
3.5.2	The Aim	37
3.5.3	The Calculation	38
3.5.4	The Belief Propagation Algorithm.	39
3.6	Comparison to Previous Work	40
3.7	The Loss of the Markov Property	41
3.8	Limiting the Time-Slices	41
3.9	Conclusion	43
	References	43
4	Maintaining State: Optimisations	45
4.1	Expectation Propagation	45
4.2	k-Best Belief Propagation	46
4.2.1	The Idea	46
4.2.2	The New Update Equation	47
4.2.3	Reducing Complexity	48
4.2.4	Choosing the k -Best	50
4.2.5	Related Work	50
4.3	Grouped Belief Propagation	51
4.4	Mostly Constant Factors	51
4.5	Experimental Comparison of Inference Algorithms	53
4.6	Conclusion	55
	References	55
5	Policy Design	57
5.1	Policy Learning Theory	57
5.2	Summary Actions	58
5.3	TOWNINFO Summary Acts: An Example	59
5.4	Function Approximations for Dialogue Management	61
5.5	TOWNINFO Function Approximations: An Example	62
5.5.1	Grid-Based Features with No Parameter Tying	62
5.5.2	Grid-Based Features with Parameter Tying	63
5.6	Natural Actor Critic	64
5.6.1	Sampling Methods	66
5.7	Simulation	67
5.8	TOWNINFO Learning: An Example	68
5.9	Conclusion	69
	References	69
6	Evaluation	71
6.1	TOWNINFO Systems	71
6.1.1	Hand-Crafted State Transitions	72
6.1.2	Partially Observable State Transitions	74

6.2	Simulated Comparison	76
6.3	User Trial	76
6.4	Evaluating the Effects of Semantic Errors	78
6.5	Conclusion	81
	References	81
7	Parameter Learning	83
7.1	An Extended TOWNINFO System	84
7.1.1	Extended TOWNINFO Dialogue State	84
7.1.2	Extended TOWNINFO Summary Acts	84
7.1.3	Extended TOWNINFO Summary Features	86
7.2	Specialised User Act Factors	87
7.3	Learning Dirichlet Distributions	89
7.3.1	The Approximation and Target Functions	90
7.3.2	Matching the Target Function	93
7.3.3	The Algorithm	94
7.4	Tied Dirichlet Distributions	95
7.5	Parameter Learning for Re-Scoring Semantics	98
7.5.1	Simulated Evaluation on TOWNINFO	98
7.5.2	User Data Evaluation on TOWNINFO	99
7.6	Parameter Learning for Improving the Dialogue Manager	100
7.7	Conclusion	101
	References	102
8	Conclusion	103
	Appendix A: Dialogue Acts Formats	105
	Appendix B: Proof of Grouped Loopy Belief Propagation	107
	Appendix C: Experimental Model for Testing Belief Updating Optimisations	111
	Appendix D: The Simulated Confidence Scorer	113
	Appendix E: Matching the Dirichlet Distribution	115
	Appendix F: Confidence Score Quality	119
	Author Biography	133
