

Contents

1	Introduction	1
1.1	Issues and Goals	1
1.2	Technology Versus Knowledge	2
1.3	The Role of Technology	3
1.4	Approach and Methodology	5
1.5	The Process of Value Adding	5
1.6	How can Technology Contribution be Assessed	6
1.7	How the Book is Structured	6
	References	7
2	Technology in Growth Models	9
2.1	Comparative-Static Models	10
2.2	Dynamic Models	10
2.3	Technology and the Solow Model	12
2.3.1	Technological Change as a Type of Labor Productivity	15
2.3.2	Technological Change as a Type of Capital Productivity	16
2.4	Technology and Total Factor Productivity	17
2.5	Technology and A.C Models	21
2.6	Endogenous Technology Models	24
2.7	A New Linear Model	25
2.7.1	A Simple Production Model	26
2.7.2	A More Complete Model	28
	References	31
3	A Model to Measure Technology	33
3.1	Operational Concepts and Methodology	34
3.2	Technology and Knowledge	35
3.3	Capital and Technology	36
3.4	The Model's Algorithm	36
3.4.1	How the Algorithm Works	40
3.5	KTC Dynamic Model and Growth Conditions	43
	References	45

4 The Value Added by Technology	47
4.1 Comparing Economic Activity Sectors	47
4.2 Comparing Economies	51
4.3 Conclusions	53
Reference.	54
5 Technology Dependence Taxonomy	55
5.1 A New Metric for a New Taxonomy	56
5.2 Technological Content of a Product	59
References	62
6 Value Representing Technology and Knowledge	63
6.1 The Origins of Value	64
6.2 Axiology and Other Types of Value	64
6.3 Economic Value	65
6.4 Value Consumed, Restored and Created	68
6.4.1 Production, Consumption and Investment	69
6.4.2 Minimum Value to Return and Created Value	70
6.5 The Cycle Knowledge-Value-Knowledge	74
6.5.1 How Value Represents Knowledge	75
6.5.2 Value as the Criterion for Knowledge	78
References	78
7 Key Conclusions	81
Annex	85
