

Contents

- 1 Introduction 1**
 - 1.1 Objectives and Motivation 1
 - 1.1.1 Trends in Vehicle Fuel Economy 1
 - 1.1.2 Road Map Towards Energy Sustainable Mobility 5
 - 1.1.3 Hybrid Technology 8
 - 1.2 Control Challenges for Hybrid Electric Vehicles 11
 - 1.3 Bibliographical Notes 12
 - References 13
- 2 Cyber-physical Modeling of Hybrid Vehicles 15**
 - 2.1 Introduction 15
 - 2.2 Hybrid Vehicle Definitions 16
 - 2.3 Models of Hybrid Powertrain Components 18
 - 2.3.1 Combustion Engine 18
 - 2.3.2 Electric Machine 22
 - 2.3.3 Storage Device 24
 - 2.4 Drive Cycles 30
 - 2.5 Bibliographical Notes 35
 - References 36
- 3 Problem Definition 39**
 - 3.1 Formal Problem Statement 39
 - 3.2 Performance Criterion 39
 - 3.3 Vehicle Description 40
 - 3.3.1 Series Hybrid Topology 41
 - 3.3.2 Parallel Hybrid Topology 41
 - 3.3.3 Vehicle State Equation 42
 - 3.4 State Constraints 43
 - 3.5 Input Constraints 44
 - 3.6 Mixed State and Input Constraints 44
 - 3.7 Problem Definition Summary 45
 - References 46

4	Analytical Solution Methods	47
4.1	Method of Lagrange Multipliers	47
4.1.1	Introduction to Method of Lagrange Multipliers	47
4.1.2	EMS Solution Using Method of Lagrange Multipliers	49
4.2	Pontryagin's Minimum Principle	53
4.2.1	Introduction to the Hamiltonian Function	53
4.2.2	Introduction to Pontryagin's Minimum Principle	57
4.2.3	EMS Solution Using Pontryagin's Minimum Principle	60
4.2.4	EMS Solution with Model Equations Taken from Chap. 2	61
4.2.5	EMS Solution Incorporating State Constraints	65
4.3	Summary Analytical Solutions	66
4.4	Bibliographical Notes	67
	References	68
5	Numerical Solutions for Known Trajectories	71
5.1	Introduction on Numerical Solutions	71
5.2	Power and Velocity Trajectories	73
5.3	Indirect Solution Based on a Boundary Value Problem Description	74
5.3.1	Control Constrained Solution	75
5.3.2	State Inequality Constrained Solution	80
5.4	Direct Solution Based on the Dynamic Programming Algorithm	83
5.4.1	Discretization of the Time, and Quantization of the State and Control Variable	83
5.4.2	The Dynamic Programming Algorithm	85
5.4.3	Estimation of the Costate Variable	88
5.5	Comparison of the Indirect and Direct Method	89
5.5.1	Accuracy	89
5.5.2	Computational Effort	91
5.6	Case Study: Component Sizing for Hybrid Vehicles	92
5.6.1	Introduction to the Case	93
5.6.2	Component Sizing Results	94
5.7	Bibliographical Notes	96
	References	97
6	Real-Time Implementable Strategies	99
6.1	Introduction to Real-Time Implementable Strategies	99
6.2	Rule-Based Approaches	100
6.3	Optimal Control-Based Approaches	101
6.3.1	On-line Optimization of the Hamiltonian Function	102
6.3.2	On-line Estimation of the Costate Variable	104
6.3.3	Example of an Optimal Control-Based Strategy	106
6.4	Bibliographical Notes	109
	References	109
7	Experimental Case Studies	111
7.1	Micro Hybrid Energy Management	111

7.1.1	Optimal Power Control in Micro Hybrid Electric Vehicles .	111
7.1.2	Drivetrain Model	112
7.1.3	Problem Definition	113
7.1.4	Quadratic Programming	114
7.1.5	Online Strategy	118
7.1.6	Experimental Validation	120
7.1.7	Strategy Results	122
7.1.8	Evaluation & Discussion	125
7.1.9	Conclusions	129
7.2	Optimal Control of a Hybrid Electric Truck	129
7.2.1	Experimental Set-up	129
7.2.2	Implemented Controls	131
7.2.3	Tuning of the Costate Variable Estimation	132
7.2.4	Strategy Comparison	135
7.2.5	Conclusions	138
	References	139
