

Contents

1	Introduction	1
1.1	General Formulation of an Optimization Problem	1
1.1.1	Design Variables, Constraints and Objective Function	3
1.1.2	Global and Local Minimum, Descent Direction	5
1.1.3	Optimality Conditions	7
1.2	Convex Optimization Problems	8
1.2.1	Semidefinite Programming	11
1.2.2	Dual Problem	13
1.3	Optimization in Engineering Design	14
1.4	Main Objectives of the Book	16
1.4.1	The Uncertain System \mathcal{G}	17
1.4.2	Structured Controller K	18
1.4.3	Interconnection $[\mathcal{G}, K]$	19
1.4.4	Performance Specifications	20
1.4.5	Algorithms for Finding an Acceptable Solution	21
1.5	Notes and References	21
1.5.1	General Nonlinear Optimization	22
1.5.2	Computational Complexity	22
1.5.3	Convex Optimization	23
1.5.4	Stochastic Optimization	23
2	Signal and System Norms	25
2.1	Signal Norms	25
2.1.1	\mathbf{L}_1 -Space and \mathbf{L}_1 -Norm	26
2.1.2	\mathbf{L}_2 -Space and \mathbf{L}_2 -Norm	26
2.1.3	\mathbf{L}_∞ -Space and \mathbf{L}_∞ -Norm	27
2.1.4	Extended \mathbf{L}_p -Space	27
2.1.5	RMS-Value	27
2.2	LTI Systems	28
2.2.1	System Stability	30
2.2.2	Controllability, Observability	32

2.2.3	Transfer Matrix	34
2.3	System Norms	35
2.3.1	Definition of the \mathbf{H}_2 -Norm and \mathbf{H}_∞ -Norm of a System . .	36
2.3.2	Singular Values of a Transfer Matrix	37
2.3.3	Singular Values and \mathbf{H}_2 , \mathbf{H}_∞ -Norms	39
2.3.4	Computing Norms from the State Space Equation	39
2.4	Notes and References	42
2.4.1	LMI Formulation for the Computation of the \mathbf{H}_2 -Norm . .	42
2.4.2	Computing the \mathbf{H}_2 and \mathbf{H}_∞ -Norms of a Given LTI System .	43
2.4.3	Singular Value Decomposition	44
3	Optimization in Control Theory	45
3.1	Notion of System and Feedback Control	45
3.2	The Standard Control Problem	47
3.2.1	The Standard Control Problem as an Optimization Problem	48
3.2.2	Extended System Model	49
3.2.3	Controller	51
3.2.4	Closed-Loop System and Stabilizing Controllers	51
3.3	Performance Specifications	61
3.3.1	Tracking Error	63
3.3.2	Control Input	63
3.3.3	Time-Domain Specifications	63
3.4	Optimal Controller Design and Multi-objective Optimization . . .	68
3.4.1	Scalarization of the Multi-objective Function	70
3.4.2	Limits of a Convex Formulation of the Optimal Control Design Problem	71
3.5	Structured Controllers	72
3.5.1	Important Examples of Structured Controllers	73
3.5.2	Difficulties in Solving the Structured Control Problem . . .	75
3.5.3	Robustness Issue	76
3.6	Notes and References	76
3.6.1	State Space Description, Observer, and Formulation of the Control Problem	77
3.6.2	Multi-objective Optimization and Pareto Optimality	78
3.6.3	Structured Controller	78
4	Stochastic Optimization Methods	81
4.1	Motivations and Basic Notions	81
4.1.1	Notion of Acceptable Solution	82
4.1.2	Some Characteristics of Stochastic Methods	84
4.2	Pure Random Search Methods	85
4.2.1	Non-localized Search Method	86
4.2.2	Localized Search Method	89
4.3	Simulated Annealing	89
4.3.1	Metropolis Algorithm and Simulated Annealing	90
4.3.2	Simulated Annealing Algorithm	91

4.4	Genetic Algorithm	93
4.4.1	The Main Steps of a Genetic Algorithm	93
4.4.2	The Standard Genetic Algorithm	95
4.5	Particle Swarm Optimization	97
4.5.1	Dynamics of the Particles of a Swarm	97
4.5.2	The Standard PSO Algorithm	98
4.6	Robust Optimization	99
4.6.1	Worst-Case Approach	100
4.6.2	Average Approach	101
4.7	Notes and References	103
4.7.1	Pure Random Search Methods	103
4.7.2	Simulated Annealing	104
4.7.3	Genetic Algorithms	104
4.7.4	Particle Swarm Optimization	105
5	Heuristic Kalman Algorithm	107
5.1	Introduction	107
5.2	Principle of the Algorithm	108
5.2.1	Gaussian Generator	109
5.2.2	Measurement Process	110
5.2.3	Kalman Estimator	110
5.3	Equation of the Kalman Estimator	112
5.4	Heuristic Kalman Algorithm and Implementation	113
5.4.1	Updating Rule of the Gaussian Distribution	114
5.4.2	Initialization and Parameter Settings	114
5.4.3	Stopping Rule	115
5.4.4	The Feasibility Issue	115
5.5	Numerical Experiments	116
5.5.1	Comparison with SA, GA, and PSO	116
5.5.2	Comparison with Some Other Metaheuristics	120
5.6	Conclusion	126
5.7	Notes and References	126
5.7.1	Multivariate Gaussian Distribution	126
5.7.2	The Kalman Filter	127
5.7.3	About the Numerical Experiments	127
6	Uncertain Systems and Robustness	129
6.1	Notion of Uncertain System	129
6.1.1	Parametric and Dynamic Uncertainty	130
6.1.2	General Representation of an Uncertain Linear System	130
6.2	Parametric Uncertainty	132
6.2.1	Affine Parameter-Dependent Model	134
6.2.2	Polytopic Model	135
6.2.3	LFT Model	136
6.3	Dynamic Uncertainty	139
6.3.1	Multiplicative Uncertainty	139

6.3.2	Additive Uncertainty	141
6.3.3	Coprime Uncertainty	142
6.4	Mixed Uncertainty	144
6.5	Structured Robust Control	145
6.5.1	Robust Stability Condition	149
6.5.2	Robust Performance Condition	154
6.5.3	General Stochastic Algorithm	155
6.6	Notes and References	160
6.6.1	LFT Representation of Uncertain Systems	161
7	H_∞ Design of Structured Controllers	163
7.1	General Formulation of the Structured H_∞ Control Problem	163
7.2	Mixed Sensitivity Approach	165
7.3	H_∞ Loop Shaping Design Approach	168
7.3.1	The H_∞ Loop-Shaping Design Procedure	170
7.3.2	Robustness and ν -Gap Metric	172
7.3.3	Loop-Shaping Design with Structured Controllers	175
7.4	Design Examples	177
7.4.1	Design Example 1	177
7.4.2	Design Example 2	180
7.4.3	Design Example 3	189
7.4.4	Design Example 4	194
7.5	Notes and References	197
8	H_2 and Mixed H_2/H_∞ Design of Structured Controllers	199
8.1	H_2 Design of Structured Controllers	199
8.1.1	Formulation of the Robust H_2 Design Problem	199
8.1.2	Set of Robustly Stable SOF Controllers	202
8.1.3	Worst-Case Performance and Average Performance	205
8.1.4	Guaranteed LQ Cost with Time Varying Parameters	207
8.2	Mixed H_2/H_∞ Design of Structured Controllers	212
8.2.1	Problem Formulation	212
8.2.2	Set of Robustly Stable SOF Controllers	213
8.3	Design Examples	214
8.3.1	Design Example 1	214
8.3.2	Design Example 2	219
8.4	Notes and References	224
8.4.1	Kharitonov Method	225
8.4.2	Guaranteed Cost Control	225
8.4.3	Mixed H_2/H_∞ Control	226
8.4.4	Petersen's Lemma	226
8.4.5	Modeling the Active Magnetic Bearing	227
9	Nonlinear Structured Control via the Multi-model Approach	233
9.1	Multi-model Representation of a Given Nonlinear System	233
9.1.1	Global Representation of a System from Local Models	234

9.1.2	Some Considerations for Building a Multi-model	238
9.2	Design of a Nonlinear Structured Controller	249
9.2.1	The System Model	249
9.2.2	The Controller	252
9.2.3	Closed-Loop Quadratic Stability	255
9.3	Design Examples	258
9.3.1	Design Example 1	258
9.3.2	Design Example 2	262
9.3.3	Design Example 3	265
9.4	Notes and References	270
9.4.1	Multi-model and Fuzzy Model	270
9.4.2	Multi-model-Based Control and Gain-Scheduling	271
9.4.3	Remark Concerning the Output Equation of the Multi-model	271
9.4.4	Optimal Linearization	272
9.4.5	Dwell Time	273
10	Conclusion	275
10.1	The Necessity of the Uncertain Model	275
10.1.1	Certainty Prediction	275
10.1.2	Uncertain Prediction	277
10.2	The Closed-Loop Interconnection	277
10.3	Design Procedure	278
Appendix	Convergence Properties of the HKA and Program Code	281
A.1	Convergence Properties	281
A.2	Program Code of the Heuristic Kalman Algorithm	283
A.3	Example of Use of this Program	285
A.4	MatLab Function Used in Example 6.9	286
References	289
Index	295

Structured Controllers for Uncertain Systems

A Stochastic Optimization Approach

Toscano, R.

2013, XXIV, 298 p. With online files/update., Hardcover

ISBN: 978-1-4471-5187-6
