Part I Basic Processes of Genome Evolution

1 Basic Metabolism Surrounding DNAs	3
1.1 Central Dogma of Molecular Biology	3
1.2 DNA Replication.....	4
1.2.1 Chemical Nature of DNA Molecules.....	4
1.2.2 DNA Replication Systems	6
1.3 Transcription	9
1.3.1 RNA	9
1.3.2 Messenger RNA (mRNA).....	10
1.3.3 Transcription Machinery and Splicing.....	10
1.3.4 RNA Editing	12
1.4 Translation and Genetic Codes	12
1.4.1 Transfer RNA (tRNA).....	12
1.4.2 Genetic Codes	13
1.4.3 Ribosome and Translation.....	15
1.5 Proteins	16
1.5.1 Amino Acids	16
1.5.2 Four Strata of the Protein Structure	16
1.5.3 Protein Diversity	19
1.5.4 Protein Domains and Motifs	21
1.6 Genes.....	22
1.6.1 Protein Coding Genes	22
1.6.2 Chromosomes	24
References.....	24
2 Mutation	27
2.1 Classification of Mutations	27
2.1.1 What Is Mutation?.....	27
2.1.2 Temporal Unit of Mutation	28
2.1.3 Mutations Affecting Small Regions of DNA Sequences	28

2.1.4	Mutations Affecting Large Regions of DNA Sequences	29
2.2	Nucleotide Substitutions	30
2.2.1	Basic Characteristics of Nucleotide Substitutions	30
2.2.2	Nucleotide Substitutions in Protein Coding Regions.....	33
2.2.3	Methylation Creates “Fifth” Nucleotide	34
2.3	Insertion and Deletion.....	34
2.3.1	Basic Characteristics of Insertions and Deletions.....	34
2.3.2	Insertions and Deletions of Unique Sequences.....	35
2.3.3	Insertions and Deletions of Repeat Sequences	36
2.4	Recombination and Gene Conversion.....	39
2.4.1	Nature of Gene Conversion.....	40
2.4.2	Gene Conversion on Duplog Pairs	41
2.5	Gene Duplication	42
2.5.1	Classification of Duplication Events.....	42
2.5.2	Drift Duplication.....	43
2.5.3	Genome Duplication	44
2.6	Estimation of Mutation Rates	44
2.6.1	Direct and Indirect Method.....	44
2.6.2	Direct Method	45
2.6.3	Indirect Methods	47
2.6.4	Mutation Rates of Bacteria, Organelle, and Viruses	48
2.7	Mutation Affecting Phenotypes	49
2.7.1	What Is Phenotype?	49
2.7.2	Mutations in Protein Coding Region	49
2.7.3	Mutations in Noncoding Region	51
	References.....	52
3	Phylogeny	55
3.1	DNA Replications Generate Phylogenies	55
3.2	Genealogy of Individuals	57
3.2.1	Genealogy of Haploid Individuals	57
3.2.2	Genealogy of Diploid Individuals.....	58
3.2.3	Paternal or Maternal Genealogy of Diploid Individuals.....	59
3.3	Gene Genealogy.....	61
3.3.1	When a Gene Tree Is Identical to a Genome Tree	61
3.3.2	Gene Phylogenies in Diploids.....	62
3.3.3	Three Layers of Gene Phylogenies	64
3.3.4	Orthology and Paralogy	66
3.3.5	Gene Conversions May Twist the Gene Tree.....	68
3.3.6	Horizontal Gene Transfer and Xenology	70
3.4	Species Phylogeny	71
3.4.1	Two Layers of Species Trees	71
3.4.2	Gene Tree as the Approximation of Species Tree.....	72
3.4.3	Gene Tree May Be Different from Species Tree.....	73
3.5	Basic Concepts of Trees and Networks	74

3.5.1	Mathematical Definition	74
3.5.2	The Number of Possible Tree Topologies.....	76
3.5.3	How to Describe Trees and Networks.....	78
3.5.4	Static Networks and Dynamic Trees.....	80
3.5.5	Relationship Between Trees.....	81
3.6	Biological Implications of Trees and Networks.....	83
3.6.1	Fission and Fusion of Species and Populations	83
3.6.2	Importance of Branch Length	84
3.6.3	Trees and Taxonomy	85
	References.....	86
4	Neutral Evolution.....	89
4.1	Neutral Evolution as Default Process of the Genome Changes.....	89
4.1.1	Our World Is Finite	90
4.1.2	Unit of Evolution	90
4.2	How to Describe the Random Nature of DNA Propagation.....	91
4.2.1	Gene Genealogy Versus Allele Frequency Change.....	91
4.2.2	Branching Process.....	94
4.2.3	Coalescent Process.....	97
4.2.4	Markov Process.....	102
4.2.5	Diffusion Process	103
4.2.6	A More Realistic Process of Allele Frequency Change of Selectively Neutral Situation.....	106
4.3	Expected Evolutionary Patterns Under Neutrality.....	106
4.3.1	Fixation Probability	106
4.3.2	Rate of Evolution	107
4.3.3	Amount of DNA Variation Kept in Population	108
4.4	DNA Polymorphism	109
4.4.1	Single Nucleotide Polymorphism (SNP)	109
4.4.2	Insertions and Deletions (Indel).....	110
4.4.3	Repeat Number Polymorphism.....	110
4.4.4	Copy Number Variation	110
4.5	Mutation Is the Major Player of Evolution	110
4.6	Evolutionary Rate Under the Neutral Evolution.....	111
4.6.1	Molecular Clock.....	112
4.6.2	Heterogeneous Evolutionary Rates Among Proteins.....	114
4.6.3	Heterogeneous Evolutionary Rates Among Protein Parts	115
4.6.4	Heterogeneous Evolutionary Rates Among Organisms.....	116
4.6.5	Unit of Evolutionary Rate	118
4.7	Various Features of Neutral Evolution.....	118
4.7.1	Synonymous and Nonsynonymous Substitutions.....	118
4.7.2	Junk DNA	119
4.7.3	Pseudogenes.....	120
4.7.4	Neutral Evolution at the Macroscopic Level	122
	References.....	122

5 Natural Selection 125

5.1 Basic Concept of Natural Selection 125

5.2 Various Types of Positive Selection 127

5.2.1 Balancing Selection 127

5.2.2 Arms Race Between Hosts and Parasites..... 129

5.3 Natural Selection on Populations with a Large Number of Individuals 129

5.3.1 A Series of Simplifications in Many Theoretical Models..... 129

5.3.2 The Case for Haploids 130

5.3.3 The Case for Diploids 132

5.3.4 Overdominant Selection..... 134

5.4 Natural Selection on Populations with Finite Number of Individuals 135

5.4.1 Gene Genealogy Under Natural Selection..... 135

5.4.2 Diffusion Approximation with Natural Selection 136

5.4.3 Fixation Probability of a Mutant..... 137

5.4.4 Slightly Deleterious and Nearly Neutral Mutations..... 139

5.4.5 Compensatory Mutations 139

5.5 Natural Selection at the Genomic Level 140

5.5.1 Selective Sweep and Background Selection 140

5.5.2 Gain and Loss of Genes 141

5.5.3 Purifying Selection at Synonymous Sites 142

5.5.4 Purifying Selection at Noncoding Regions..... 143

5.5.5 Positive Selection for Ape and Human Genes 144

5.5.6 Detection of Positive Selection Through Genome-Wide Searches 146

References..... 148

Part II Evolving Genomes

6 A Brief History of Life 157

6.1 Origin of Life 157

6.2 Evolution of the Genetic Code..... 160

6.3 Establishment of Cell..... 162

6.4 Emergence of Eukaryotes 163

6.5 Multicellularization..... 163

6.6 From Origin of Chordates to Emergence of Modern Human 167

References..... 171

7 Prokaryote Genomes..... 175

7.1 Diversity of Prokaryotes and Their Genome Sequencing Efforts 175

7.2 The Basic Genome Structure of Prokaryotes..... 177

7.3 GC content and Oligonucleotide Heterogeneity 180

7.4 Horizontal Gene Transfer..... 182

7.5	Codon Usage	185
7.6	Metagenomes	187
	References	188
8	Eukaryote Genomes	193
8.1	Major Differences Between Prokaryote and Eukaryote genomes	193
8.2	Organelle Genomes	194
8.2.1	Mitochondria	196
8.2.2	Chloroplasts	198
8.2.3	Interaction Between Nuclear and Organelle Genomes	199
8.3	Intron	199
8.3.1	Classification of Intron	199
8.3.2	Introns Early/Late Controversy	200
8.3.3	Functional Regions in Introns	201
8.4	Junk DNAs	201
8.4.1	Dispersed Repeats	201
8.4.2	Tandem Repeats	202
8.4.3	Pseudogenes	203
8.4.4	Junk RNAs and Junk Proteins	203
8.5	Evolution of Eukaryote Genomes	204
8.5.1	Genome Duplication	204
8.5.2	RNA Editing	205
8.5.3	C-Value Paradox	206
8.5.4	Conserved Noncoding Regions	206
8.5.5	Mutation Rate and Genome Size	207
8.6	Genome of Multicellular Eukaryotes	209
8.6.1	Plant Genomes	209
8.6.2	Fungi Genomes	211
8.6.3	Animal Genomes	212
8.7	Eukaryote Virus Genomes	217
