
Contents

1	Introduction	1
1.1	Programming Concept	1
1.2	Example: An Omelette-Cooking Algorithm	2
1.3	Common Properties of Computer Programs	4
1.4	Programming in R Using Functions	4
1.4.1	Working with Conditional Statements	6
1.5	Some Conventions	7
1.6	Conclusions	9
1.7	Exercises	9
2	Loops	13
2.1	Loop Concept	13
2.1.1	Example: 1-Norm with For Statement	13
2.1.2	Example: 1-Norm with While Statement	16
2.1.3	Example: Finding the First Zero	19
2.1.4	Example: Infinity Norm	22
2.2	Nested Loops	23
2.2.1	Example: Matrix–Vector Multiplication	23
2.2.2	Example: Closest-Pair Problem	26
2.3	Iteration Concept	28
2.3.1	Example: Number of Terms for e	28
2.3.2	Example: Geometric Series	30
2.3.3	Example: Babylonian Method	30
2.4	Conclusions	32
2.5	Exercises	32
3	Recursions	35
3.1	Recursion Concept	35
3.1.1	Example: Recursive Calculation of 1-Norm	35
3.1.2	Example: Fibonacci Numbers	40
3.1.3	Example: Factorial	41
3.2	Using Recursion for Solving Problems	42
3.2.1	Example: Highest Common Factor	42
3.2.2	Example: Lowest Common Multiple	43
3.2.3	Example: Towers of Hanoi	45

3.2.4	Example: Binary Search	49
3.2.5	Example: Sequence Generation	51
3.2.6	Example: Determinant	53
3.3	Proof by Induction	54
3.4	Conclusions	56
3.5	Exercises	56
4	Complexity of Programs and Algorithms	59
4.1	Complexity of Programs	60
4.1.1	Example: Inner Product	60
4.2	Order of Complexities	62
4.2.1	Order Notation	63
4.2.2	Example: Revisiting Inner Product	65
4.2.3	Example: Revisiting Infinity Norm	66
4.2.4	Example: Revisiting Matrix–Vector Multiplication	67
4.3	Shortcuts for Finding Orders of Programs	69
4.3.1	Example: Matrix–Matrix Multiplication	70
4.4	Complexity and Order of Recursive Programs and Algorithms	71
4.4.1	Example: Revisiting Binary Search	74
4.4.2	Example: Revisiting Sequence Generation	75
4.5	Orders of Various Algorithms	76
4.5.1	Example: Traveling Salesman Problem	78
4.5.2	Fibonacci Numbers	78
4.5.3	Binomial Coefficients	80
4.6	Conclusions	83
4.7	Exercises	84
5	Accuracy Issues	87
5.1	Evaluating Mathematical Functions at Difficult Points	87
5.2	Polynomial Evaluation	91
5.2.1	Horner’s Algorithm	92
5.2.2	Accuracy of Polynomial Evaluation	94
5.3	Matrix–Matrix Multiplications	95
5.4	Conclusions	97
5.5	Exercises	97
6	Sorting	99
6.1	Bubble Sort Algorithm	100
6.2	Insertion Sort Algorithm	104
6.3	Quick Sort	109
6.4	Comparisons	112
6.5	Conclusions	114
6.6	Exercises	114
7	Solutions of Linear Systems of Equations	117
7.1	Overview of Linear Systems of Equations	117
7.2	Solutions of Triangular Systems	120

7.2.1	Forward Substitution	121
7.2.2	Backward Substitution	123
7.3	Gaussian Elimination	124
7.3.1	Elementary Row Operations	124
7.3.2	Steps of the Gaussian Elimination	126
7.3.3	Implementation	127
7.4	LU Factorization	128
7.5	Pivoting	132
7.6	Further Topics	136
7.6.1	Banded Matrices	136
7.6.2	Cholesky Factorization	139
7.6.3	Gauss–Jordan Elimination	141
7.6.4	Determinant	142
7.6.5	Inverting Matrices	142
7.7	Conclusions	143
7.8	Exercises	144
8	File Processing	149
8.1	Investigating Files	149
8.2	Modifying Files	154
8.3	Working with Multiple Files	157
8.4	Information Outputs	161
8.5	Conclusions	162
8.6	Exercises	162
9	Suggested Mini Projects	165
9.1	Programming Traffic	165
9.1.1	Preliminary Work	165
9.1.2	Main Work 1	167
9.1.3	Main Work 2	168
9.1.4	Main Work 3	170
9.2	Sorting Words	171
9.2.1	Preliminary Work	171
9.2.2	Main Work 1	173
9.2.3	Main Work 2	173
9.3	Designing Systems	174
9.3.1	Preliminary Work	174
9.3.2	Main Work 1	176
9.3.3	Main Work 2	176
	Bibliography	179
	Index	181
